

Image Integrator combines the power of Aldus Fetch and QuarkXPress. Image Integrator is an XTension that allows the user to import pictures from Fetch catalogs to special libraries in QuarkXPress. The interaction between QuarkXPress and Fetch is accomplished by pasting the disk reference and a thumbnail preview of each picture □ into the clipboard. Image Integrator then imports the images into QuarkXPress. Image Integrator allows all QuarkXPress Image types to be imported. This includes EPS, TIFF, RIFF, Scitex CT, PICT and PAINT. For other types, you can order the XTension Touch from Vision's Edge.
