

Please Register your screen saver by sending **\$6.00** to:

-NexusMedia
-4023 Pemberton Drive
-Charlotte, North Carolina 28210 USA

*****OR*****

Use our **secure on-line credit card** transactions offered by
Windows95.com Go to our web site to order:

<http://members.aol.com/nexusmedia> (Voted a Starting Point Hot Site!!!)

Please send your **e-mail address** and the **name of the screen saver**

Without an e-mail address we will **NOT** send the code.

Codes will be e-mailed once payment is received.

This code will erase all registration text.

=====

TO UNINSTALL:

Go to C:\windows and double-click the "Floating Cities.exe" file

=====

TROUBLESHOOTING:

Invalid Page Faults:

Reboot the computer, if they still persist
uninstall using directions above, reboot computer, reinstall.

Registration Text Remains After Payment Was Made:

Check the .ini file. Sometimes a computer or the application will
"hiccup" allowing the ini file to reset itself. If problem persist
please contact vendor. The .ini file is created the first time you run
the screen saver.

The Screen Saver Is Bigger Than My Monitor:

The scene gets cut off:
Set your resolution to 800 x 600 via display properties in control panel.

Setting Your Resolution:

You need to go to Start -> Settings -> Control Panel -> Display
Click the Settings tab and in the *DeskTop Area* slide the setting to **800 x 600**

Setting The Color Depth:

You need to go to Start -> Settings -> Control Panel -> Display
Click the Settings tab and in the *Color Palette* drop down list box choose **High Color - 16 Bit**.

Changing The Graphics Driver:

If your screen saver has been installed but no graphics are showing
you may need to change your graphics driver. We ship 3 different drivers with this screen saver,
try different ones to see if it helps restore the graphics. Do this by running the setup.exe
program and choose "*Change Graphics Driver*" then follow the instructions.

=====

FAQ's:

Will it work in 640 x 480?

You can either follow the instructions above or wait until
we post a version for 640 x 480. Until then it will be cropped.

Why doesn't the resolution automatically adjust?

Well, we have developed one that does, however our

screen savers are graphically intensive and the loss of quality in the scaling is not something we deem acceptable. By developing specifically for a particular resolution, you get the best possible graphics.

Why aren't there settings to control different aspects of the screen saver?

Because we want to offer a screen saver at a reasonable price, (Under \$7.00). To do this we cut corners. Options and settings are one of the major corners we cut. Those require many more programming hours.

Does NexusMedia offer other screen savers?

We sure do! Aquarium, Aircraft, Space, UFO, and others. Just visit our web site!

=====

We **strongly recommend** a **Pentium** processor made by **INTEL**. For unknown reasons, chips made by Cyrix and AMD sometimes cause General Protection Faults or just will not run at all. Also we recommend at least 12 MB RAM. Less will work, but not as good.

For questions or comments please direct e-mail to: **NexusMedia@aol.com**

=====

If you are not registering we would like to know why. From this feedback we may use it to develop better screen savers!
