About FirstClass Client for Windows

The FirstClass® program group contains the following applications:

FirstClass Client	The FirstClass Client application program.
FirstClass Notify	The FirstClass Network Notification Utility. For use when FirstClass is run on a network; provides instant notification of new mail arriving.

Settings files are used to connect to different FirstClass systems. They contain information such as the phone number when using a modem, or a network address when using a network. You may create program items which start the FirstClass application with a settings file as the initial file. The following such program items are supplied with FirstClass:

SoftArc Online	Settings file to reach SoftArc's public FirstClass system via modem
Generic Network	Example settings file for use with a network
Generic Modem	Example settings file for use with a modem

FirstClass for Windows contains a built-in manual. Run the application and use the Help menu to view the manual.

Version 2.6 October, 1994.
