

CODE MASTER 1.0

[Code Master](#) is a 32-bit Visual Basic 4.0 Add-In. It stores your useful code fragments, and lets you edit, delete, retrieve, move, copy and preview them anytime you want to. [Code Master](#) was written by Jason Blevins in 1995 and 1996. [Code Master](#) requires one file that is not included, VB40032.dll. If you have the 32-bit version of Visual Basic 4.0, you should will this file. You don't have to do anything to it, just leave it where it is and everything will be fine. If you don't have the 32-bit version of VB then you shouldn't need this file, because [Code Master](#) won't work.
