Release Notes

v1.0   Initial Public Release

v1.1   First Revision

1)   Added LineMode and EOLChar properties for receiving data a line at a time.
2)   Changed LocalPort property to return unique port assigned by Winsock when no port or ServiceName specified.
3)   LocalDotAddress and LocalName properties changed to run-time only.
4)   Can now set the LocalName and LocalDotAddr properties.
5)   Allow setting LocalDotAddress property to 0.0.0.0 to Listen for any connections.
6)   Winsock startup not performed until required. Allows working offline when no local network stack is present.
7)   Corrected method of closing connections when remote host close the connection.

v1.13   Expiry date, Maintenance Release

1)   Removed expiry date
2)   Connect event now occurs when connection made, not when Action complete.
        No Connect event will occur if the connection is not made.
3)   Close event now occurs correctly when host sends empty data buffers to close connection.
4)   Fixed 0.0.0.0 capability for LocalDotAddress property
