

INTRODUCING EXTEND!

Custom Screens and Unlimited User-Defined Fields For Your Contact Management System

WELCOME TO EXTEND!

With Extend!, anyone can easily customize their contact management system to fit any industry or special application. Extend! includes links to ACT!, GoldMine, Tracker and Maximizer. You can create custom links to almost any other application within minutes.

The Extend! ScreenBuilder enables you to painlessly create customized screens that are instantly brought to life in your application. Within these new screens you can store any type of information relevant to each contact in your system. If multiple users will be accessing your new Extend! screens, whether they are on a network or on the road, the Extend! ScreenRouter will enable you to easily update their systems with the latest screen designs.

The Extend! ScreenRunner does the magic of linking the screen designs that you create to your contact management system. With Extend!, you can link your screens on a one-to-one or a one-to-many relationship with your contact record.

The Extend! program consists of two modules: ScreenBuilder & ScreenRunner

Extend! ScreenBuilder

This module is used to design custom data entry screens that will be linked to your contact management system.

ScreenBuilder allows you to design detailed screens by simply choosing the field type that you want and drawing it on the screen. Many powerful field types are available including Text, Numeric, Currency, Notes, Calculated, Images, and Check Boxes. In addition, Extend! allows the screen designer to provide screen level and field level help to the screen user.

Popup pick lists and input masks may be included to help insure fast and accurate data entry. Shape objects can be included in the screen design to draw attention to special fields, divide the screen into concise data entry components, or create simple graphic designs.

The ScreenRouter utility which is a built-in component of the ScreenBuilder module, is used to transfer new and updated screen designs to the ScreenRunner module which will link them to your contact management system. (More on the ScreenRunner module to follow.) Screens are routed to the same local computer for single user systems. If you will be sending screen designs to other Extend! users, the ScreenRouter simplifies this process by automatically routing your new designs to these users via a network connection, MS-Mail or floppy.

Extend! ScreenRunner

This module runs alongside your contact management system and performs the linking of the screens created in ScreenBuilder. When the ScreenRunner is running, your contact management system will have a new menu option available from which you may launch your Extend! screens. The Extend! menu option will list all of the available Extend! screens. The screen user then can select the screen desired and begin data entry.

Each screen that you filled-in will automatically be linked to the contact manager's current record. Multiple records of the same screen can also be linked to the same current contact record. Once a screen has been linked to a contact record it can be viewed or edited from within your contact manager simply by selecting that screen from your Extend! menu while the same contact is the current record.

FEATURES

- EASY TO USE
- POWERFUL FIELDS
- RELATIONAL CAPABILITIES
- AUTOMATIC SCREEN DISTRIBUTION
- NETWORK SUPPORT
- PICTURE SUPPORT
- DIRECT IMAGE SCANNING
- INTERNATIONALLY FRIENDLY
- WINDOWS 95 COMPATIBLE
- MS MAIL ENABLED

REQUIREMENTS

- 80386 (80486 recommended) or higher 100% compatible
- DOS 3.3 or higher 100% compatible
- Windows 3.1 or higher 100% compatible
- A Windows contact management or PIM system with DDE capability
- VGA or greater video system
- 4 MB RAM
- 5 MB hard disk space
- Mouse
- TWAIN compliant scanner (optional)

A GUIDED TOUR

A tutorial that providing step by step instructions for creating, routing and editing a sample screen is available in the E_TOUR.WRI file on this disk.

ON-LINE HELP

In addition to this document, some of your Extend! questions and/or problems can be addressed by entering our on-line help system which is available in the ScreenBuilder program. To access on-line help, press <F1> while running ScreenBuilder.

ABOUT THIS DEMO

This is a fully functional single-user demo version of Extend!. In order to provide you with an opportunity to discover all of the benefits of Extend!, this version will remain functional for 30 days. After 30 days, Extend! will disable itself and you will be required to purchase a fully licensed version if you wish to continue using the product. Purchase of a fully licensed version will also entitle you to telephone technical support, a printed manual and free software maintenance updates. The fully licensed version of Extend! is also available in network versions which will allow multiple users on a LAN to access the Extend! screens. Please see below for ordering information.

Compuserve Forum: Go Quiksoft

INSTALLING EXTEND!

Follow the installation instructions provided with your PC-Plus demo CD.

During the installation you will be prompted to indicate which module(s) you would like to install. For most installations selecting all of the options is appropriate.

Select ScreenBuilder if you will be designing screens.

Select ScreenRunner if you will be using custom Extend! screens with your contact management system.

Select "Load ScreenRunner with Windows" if you want the ScreenRunner utility added to your Windows Startup group so that the program is automatically run each time that you start Windows. If you choose to have Windows load ScreenRunner at startup, then you won't have to load it every time you start your contact manager. However if memory is an extreme issue, you can load ScreenRunner only when necessary by double clicking the Extend! ScreenRunner icon from the Extend! program group.

After the installation is complete, you must create your Extend! screens with the ScreenBuilder and route them to the local ScreenRunner module so that your ScreenRunner program can access them.

Demo Serial Number: 317224906/1

You will need to enter this serial number the first time you run Extend!.
