FILES FROM PC PLUS

Help Screen

NESTED.BAT is a very elegant batch file which produces a nested directory structure. Don't run it or look at it until you've read Ian's batch file challenge in this month's Help Screen!

Visual Basic Workshop

Learn about error handling and displaying metafiles with this visual dice-roller from reader Grahame Fairchild. Please read the magazine article for further details.

Using Visual Basic 4

Dermot Hogan puts the finishing touches to his Windows 95 system information utility. The file APISVR.EXE is an essential component, and is repeated on this month's disk in case you missed it in previous issues.

Introducing Delphi

The files accompanying this month's Delphi tutorial develop last month's calculator further and show you how easy it is to produce simple applications. Huw managed to write a text editor with so little code that he had room to explain how he programmed a basic drawing program too!

Wilf's Programmers' Workshop

SHAPES.CPP is the C++ source code for Wilf's example program which demonstrates object
orientation. It is designed to be compiled with Borland's C++ Lite - a cut-down but working
demonstration edition of its DOS-based compiler featured in the December 1994 issue of PC
Plus, and included again here.

dBASE Tutorial

Sample files for use with our getting started guide to dBASE 5.0 for Windows, featured on this SuperCD.

Getting Connected

Details of how to get on-line to CIX, CompuServe and the Internet.

INSTALLATION INSTRUCTIONS

If you choose the automatic install then the files will be copied to the default locations, detailed below. If you choose a manual install you will be prompted at each step for a destination directory and program group.

DEFAULT LOCATIONS

Contents file and uninstall program

Installation directory =
C:\PCPLUS\ISSUE115

Program group =
PC Plus SuperCD 115

Files from PC Plus:

Help Screen

Installation directory =
C:\PCPLUS\ISSUE115\HELPSCRN
