HyperText Explained

HyperText allows you to quickly "jump" to the section of the document that you are interested in. While you may scan through the User's Guide "normally" (sequentially), the same way you might read any other document using the HyperText launch pads, colored **green**, allows you to reach the desired section and traverse the document by a simple double-click of your mouse.

But what makes *this* User's Guide special is its ability to not only emulate the Windows Help features of "jumps", but also the helpful "pop-ups" used to explain terms and ideas. Using these features you can instantly and automatically jump to anywhere else in the document to obtain further information on a topic or term.

text means **jump**. **Green** double underlined text means **pop-ups**. You can jump around and use pop-ups in this User's Guide the same way you jump around the screens in the Windows "Help" system. Double-click the chapter titles in the Table of Contents to jump directly to that chapter. At the end of each chapter you can easily return to the Table of Contents by double clicking the

jump text . Double-click the cross-references throughout the document to jump to a complete explanation of that topic. Double-click on the green double underlined text and learn more about that topic or term. Use these valuable features to quickly learn the important information contained in this document.

Special Acknowledgments:

The method for jumping around documents was pioneered by Woody Leonhard of WOPR and coined DocCruise™. Look for his book ***Hacker's Guide to Word for Windows*** which he co-wrote with Vincent Chen for a source of detailed information on WordBasic.

The method for obtaining the pop-ups was pioneered by Ed Obeda and coined DocPop™

Overview - FAXSupport System

These routines have been created to make your FAXmodem easier and more user friendly to operate. One of the major draw-backs to the FAXmodem while being used under Windows is that you have to remember to swap the "default printer" back and forth when alternately printing or FAXing documents. Occasionally you might forget and cause a document to go to the wrong device. Even the most experienced user has had this happen, but for the new user... it's dramatic and confusing.

To eliminate this confusion, I have extended the capabilities of the FilePrint macro supplied by Microsoft to include automatic control over the output devices. You just have to point-and-click on the correct button and the rest is automatically taken care of. You can even choose to FAX and Print the document without having to go back to the print menu twice.

Below you will find step by step installation instructions, but first a little bit of legal stuff. "The FAXSupport System" is a product conceived by Ed Obeda. There is a small fee charged for the extended FAX controlling features added, no funds are collected for the basic print command supplied by Microsoft as part of the WinWord 6.x application. See the for more details.

System Requirement: Microsoft's WinWord 6.x. and a Windows supported FAXmodem with software, such as Delrina's WinFAX Pro, Alien's FAXit, BitFAX for Windows or Eclipse FAX (and more).

New Features for Version 6.2a

WinWord 6.x running on Win95 is now supported - Changes to the installation routines and the FAXSupport System itself now provide compatibility with the Win95 platform. Please note the following information regarding running this version of the FAXSupport System on Win95.

- a) The FAXSupport System version 6.2a is for the 16-bit Word for Windows version 6.x application, not Word 95 or Word version 7.0.
- b) It is highly recommended that you are using the 6.0c version of WinWord when running Win95. Earlier versions of WinWord appear to have a problem with Win95's use of UNC (universal naming conventions) when using networked printers. Contact Microsoft directly for upgrade information.

WEB Page Service now available -we are proud to announce our new WEB Page service. Located at URL:

<http://www.webpress.net/ipk/compenh/enhance.html>

We look forward to offering important information and upgrades via the WEB. Check us out !

Features

Previously, if you wanted to FAX a document you would have to run the "Print Setup ..." option and change the default printer to your FAXmodem. Then to print that same (or different) document, you had to remember to change the default printer back. This is a time-consuming and error prone procedure, just to send a FAX.

The routines that I have added, allow for the automated "swapping" of devices, between your true default printer and your FAXmodem. When you press the "FAX" button the system automatically changes the Windows output device to the FAXmodem (declared in

the configuration steps), then sends the output to that device. Once completed it resets the Windows default printer back to the original device (your printer). No longer do you need to remember if you set the default printer back again.

The "FAX & Print" option (*registered users only*) allows even more productivity gains, you just press that button and automatically your document is setup to be FAXed, once FAXed and without any further user input the document is also sent to your true default printer, for a hard copy. All in one step !

Toolbar selection is also possible. To quickly FAX your document use the toolbar entry of the little telephone. This works the same way as the little printer icon, but sends the document to the FAX modem instead of the printer.

274 

Additional Features include:

Advanced Options - You can customize the FAXSupport System. INI file settings allow you to configure the system to meet even the most demanding environments. Some of the new options include:

A setting to support Reverse printing of the document, but automatic normal page printing of a FAXes. Users of inkjet printers ,such as HP's DeskJet 520, will find this new feature especially helpful.

A setting to support the discontinuance of the forced addition of the toolbar icon 274  for the macro FilePrintFaxDefault. It was found that some users did not require/want it, so an option is now provided to support their request.

(see the section for more options and full details of each setting)

SmartPrint - Available from the Print and/or FAX dialog, this new feature takes the FAXSupport System to a new level of user friendliness. When the SmartPrint feature is activated, even a misconfigured default printer won't stop you from your desired task.

FAXSupport System can not only control your FAX device, but your default printer as well.

Have you ever FAXed something from another program, and then tried to print a Word document, only to have it sent to the FAX ... instead of the printer because the default printer was still set to your FAX ? Well no longer. SmartPrint has the intelligence to tell your computer to do **what you wanted to do**, not what you told it to do !

FilePrintFAXCurrentItem - A request from a user of the FAXSupport System inspired this feature. This macro allows for the easy FAXing of either the selected text or the current page if no text is selected. Great for people who may generate a daily diary or report, where each page is a different topic. Just position the cursor on the desired page and activate this macro and the information from just that page is automatically sent to the FAX.

Highlight some important text and FAX that to another. A great tool for sending ideas or notes !

Add this macro to your menu or toolbar as required, to gain the maximum ease of use. (see Word's on-line help for details on adding this custom macros to your menu or toolbars. Search for topics "adding toolbar buttons" and "adding menus")

Support for incomplete installations of WinWord - While new installations of WinWord have always been correct, if you have ever transferred your configuration onto a new computer from a tape backup or worst yet, lost a hard drive and had to rebuild everything from an old backup you may not have an original "snapshot" of your actual WinWord environment. Most tape backup software will only backup "empty" directories if you have explicitly specified them to be backed up. WinWord's Startup directory is one that can be easily overlooked. WinWord itself creates it, but does not add any files to it. An empty directory scenario. Add-in products such as the FAXSupport System require that this directory exists, if it doesn't installation will fail. Users who have this condition will automatically be prompted for the creation of the Startup directory if one doesn't exist to provide for proper installation. Watch out for this problem if you are having troubles installing other vendor's software as well.

Advanced Support for ProComm 2.x - Allows for a more robust swapping of the output devices. Users of ProComm 2.x software will find this new feature very beneficial. WinWord had problems swapping back to the default printer while ProComm was faxing a document. Activating this new feature overcomes this limitation and gives the ProComm user the full benefit of the FAXSupport System.

(see the section for more options and full details)

New Payment Option - Registration fees can now be paid via a major credit card. Checks, and CompuServe's SWREG can also be used for payment. See for details.

Installation

For those who just can not wait, you will find the at the end of this section, but please read through the complete instructions prior to attempting to install the FAXSupport System, for best results.

- 1) Once ready to perform the installation, please close any other documents you may have been working on.
- 2) Press the "Install FAX Support Macros" button (located just below this section) to add the FAXSupport System to your computer.
- 3) After the macros are copied to your machine, you will be prompted for your registration information. Please complete the information at this time. Printing the registration document will make it easier to complete the registration process after you have used the macros and find that you can't live without them... well almost !

NOTE: The registration charge is for the extended FAX controlling features added, no funds are collected for the basic print command supplied by Microsoft as part of the WinWord 6.x application.

- 4) Upon completing these steps, WinWord will perform an **EXIT**. When you start WinWord the next time you will need to go through a short (one time only) configuration process to determine your proper FAX device and then have fun !!!

Configuring the System:

- 1) Make sure that your FAXmodem and FAXmodem software are installed and working correctly.
- 2) Set your commonly used PRINTER as the default printer. Use the Control Panel to change the setting, if required.
- 3) Open WinWord and select the "Print and FAX" option from the File Menu. The new FAXSupport System dialog box will appear..
- 4) Look for the "Configure FAX" button in the lower right corner of the dialog box. Press the button. A dialog box listing the available printing devices will be presented. Choose your FAXmodem driver from this list and double click on it.

5) The system is now configured for your FAXmodem, review the to gain a basic understanding of how these macros work.

Double Click on the install button to add this valuable macro to your system:

Registration and it's Benefits

The FAXSupport System is a product. Registered users of this software are entitled to a number of advantageous benefits. If you like this program and find it useful, you are requested to support it by sending us your registration fee (see the).

When you register the FAXSupport System we'll send you a copy of the latest version of this software (if required) and a registration number to make the "nagware" go away AND allow you access to the ***FAX & Print*** option.

Benefits of Registration:

- Telephone support.
- Updated to the latest version (if required).
- Receive announcements about improvements and other points of interest.
- Gain access to the ***FAX & Print*** Option, so you can press only one button and have the document FAXed and printed.

Register Today
(Registration Form is in the next section)
to gain these valuable features !!

Please share this package with your friends and upload it to any bulletin boards you feel are worthy of it. However, when sharing the FAXSupport System, please distribute the whole, unmodified package. Thanks...

--

Registration Form

In the following section you will find the Registration Form for the FAXSupport System. It is using the new WinWord 6.x feature called **FORM**.

The bordered squares (boxed areas) are the data entry locations for your registration information. Start by clicking in the box next to the prompt marked 'Version 6.2a from' and enter where you obtained your copy of the FAXSupport System from. Then use the TAB key to jump to the next field. Once the form is completed, just click on the button marked "***Click here to print the Registration***" and the form as you have entered it will print to your default printer.

For more information on Form Fields, review the information in the WinWord Help system under 'Forms'.

THANK YOU FOR YOUR SUPPORT

Comments:

Registration via SWREG

CompuServe® users have the chose of either manual registration or they can register FAXSupport System via the SWREG service, now provided on CompuServe®. The **FAXSupport System for Word for Windows 6.x program ID is 3526** and the cost is \$15.00 USD per copy plus shipping and handling. State sales tax is automatically applied and collected by CompuServe® when using the SWREG service.

The same apply either way you may chose to register. To access this on-line service, while on CompuServe type **GO SWREG**. From this forum you will be presented with full usage instructions of the SWREG service and the ability to register your copy of the FAXSupport System. Please allow 1-2 weeks for acknowledgment upon entry of your registration information.

Attention Corporate Sites, reduce your help desk costs by purchasing Multi-user License Packs. Now available via SWREG.

10 - 15 user License Pack ID # 4511	\$ 125.00 USD *
16 - 25 user License Pack ID # 4512	\$ 175.00 USD *
26 - 100 user License Pack ID # 4513	\$ 250.00 USD *
Unlimited User Site License Pack ID # 4514	\$ 500.00 USD *1

* plus nominal shipping and handling charge of \$2.50 USD to \$3.50 USD depending on your geographic location.

1 Note: Unlimited User Site License is defined as all the users within a declared state. Multi-state organizations, with more than 100 users in each state would need to purchase one Unlimited User Site License for each state in which they plan to install the FAXSupport System.

Registration via Credit Cards

FAXSupport System users can register via a major credit card. VISA, MasterCard and EuroCard are accepted.

FAXSupport System for Word for Windows 6.x program costs \$15.00 USD per copy plus \$2.50 USD shipping and handling for domestic US/Canadian

orders or \$ 3.50 USD for international orders. Any required US state sales tax will also be applied.

You can either use the (above) or Send your

Common Questions

Your FAXmodem shows up as your Windows default printer upon starting WinWord: The routines presented here assume that the Windows default printer is set correctly prior to entering (or re-entering) WinWord. This allows you the flexibility have multiple printers and such. Use the Control Panel to correctly re-set the default printer.

While working in WinWord you have a system crash or premature shut-down and now your FAXmodem shows up as your Windows default printer: If the FAXSupport System did not get a chance to complete it's functions the FAXmodem may be left as your Windows default printer because the macro did not get a chance to re-set things. Use the Control Panel to correctly re-set the default printer.

What FAXmodems are supported by the FAXSupport System ? In theory any Windows FAX device that uses the printer emulation technique. WinFax Pro, BitFAX for Windows, Eclipse FAX, and Alien's FAXit to name a few.

I can not use the *FAX & Print* option.. Why not ? Only registered users can access this option. Registration will fix this limitation. See the section for more details on registration.

WordBasic Err 543 - Unable to Open Specified Library: a) This is usually caused when the required FAXSUPP.dll is not in the Windows\System directory. Please double check the configuration and make sure than FAXSUPP.dll is located in the windows/system subdirectory.

b) You are attempting to use this version of the FAXSupport System with WinWord 7 and a 32 bit operating system. Please contact us for upgrade details. This version is not compatible with 32bit operating systems.

I want to remove these routines: Open the FAXSUPP.dot file located in the WINWORD\STARTUP directory for complete details on how to uninstall these routines.

Changes to your FAXmodem configuration

=====

The FAXSupport System is highly flexible. If you change FAXmodem products, or COM ports just re-run the "Configure FAX" options (see the Configuration section above) and the system will automatically adapt to the changes.

Technical Support and Assistance

While the addition of PCs to our lives have greatly improved many facets of our lives, the available options allow users to quickly create systems that have a high level of complexity. With this complexity comes issues of compatibility and combinations that the programmer may have not envisioned as the application was being coded. If you find that you are experiencing problems, the first thing to do is to be able to accurately explain what you are expecting to happen verses what is actually occurring. Next we need to understand a little about your configuration. The "de-bug" button below was created so you can double-click it and it will create a document with your configuration information.

With your problem description (what you are expecting to happen verses what is actually occurring) and a copy of the configuration information, we can work towards resolving your problems. Please also include a way for us to contact you, in case we need more information.

Sorry if you have experienced a problem.

Advanced Options

To meet your various configuration needs, the FAXSupport System has a number of configuration options available as INI settings. To save on space the entries are added to the WINWORD6.ini file. This file is usually located in the WINDOWS subdirectory. Please note the file also contains various options for WinWord as well so be careful when editing it. Look for the section marked [FAXSupport Macro]. The items listed in blue are automatically controlled by the FAXSupport System and are best left alone, while you can manually update the items in red to support your custom installation.

Keyword	Possible Values	Description
FAXdevice=		<i>Your valid FAX device ie: FAX on COM2:</i>
	NEW	Valid right after installation.
	CONFIG	Valid until you configure your FAX device
Version		<i>FAXSupport System version level. Set to zero to force the INI setting to their default values</i>

ActivateSmartPrint=	<i>Controls whether or not the SmartPrint feature is active. See the document for more details.</i>	
	0	Do not activate this feature
	1 (default)	Activate the Smart Print feature
SmartPrinter=	<i>Your default printer ie: HP on LPT1:</i>	
Notices=	<i>Controls the types of messages that are displayed during the operation of the FAXSupport System.</i>	
	0	Do not display the copyright notices or other non-essential messages
	1 (default)	Display all messages and copyright notices
DefaultFAXIcon=	<i>Controls the addition of the toolbar icon upon the startup of WinWord.</i>	
	0	Do not add the icon for FilePrintFAXdefault to your toolbar
	1 (default)	Add the icon for FilePrintFAXdefault to your toolbar. Re-adds it if removed
ReversePrint=	<i>To support environments that needed to print documents in reverse order, yet wanted FAXes to be sent in the normal order. Newer HP inkjets user may find this especially helpful.</i>	
	0	Print Page order for FAXes in First to Last
	1	Print Page order for FAXes in Last to First
	2 (default)	Use the current WinWord setting for Print Page order for FAXes
ManualDeviceChange=	<i>Added to support ProComm 2.x Users</i>	
	0 (default)	Use Wordbasic to change devices
	1	Use improved routine to change devices Procomm Users should use this value.

Manual Installation

While every effort as been made to provide for the automatic installation of the FAXSupport System, there are times when a little manual help is needed. This section

will detail the simple steps needed to manually install the FAXSupport system onto your computer. Note this is only needed if the automatic routine reported a failure.

Manual installation steps:

- a) Exit WinWord, if it is currently running.
- b) Copy the FAXSUPP.dll file to your WINDOWS\SYSTEM subdirectory.
- c) Copy the FAXSUPP.dot to your WINWORD\STARTUP subdirectory.
- d) Start WinWord and the FAXSupport System will activate.

NOTE: The FAXSUPP.dll and FAXSUPP.dot files are located with the FAXSupport System distribution files.

Complimentary Products

PrettyMacro, is an advanced tool for the creation of high-quality documentation and cataloguing of your important wordbasic (macro) work.

PrettyMacro will create a nicely formatted two column report with a table of routines printed at the top of the first page. Install PrettyMacro today, and start organizing your WinWord macro code for better documentation, archival storage and debugging.

Our Internet WEB Page

In our continuing effort to provide our users with the most up to date versions and information, we would like to introduce our new WEB PAGE. Use your favorite Internet WEB browser to check it out. The URL is:

<http://www.webpress.net/ipk/compenh/enhance.html>

As this is a new service, we expect many changes to occur as it grows, so remember to re-visit the site for new and exciting information.

License Agreement

The distribution and sale of this product are intended for the use of the original purchaser only. This product is only to be used as it was originally intended to be used. Lawful users of these programs are hereby licensed only to read the programs, from their media into memory (RAM) of a computer, solely for the purpose of executing the programs on one machine at a time.

Duplicating or copying for other than backup purposes, or selling or otherwise distributing these products is a violation of the law and this agreement.

DISCLAIMER

THIS PROGRAM AND DOCUMENTATION (the "*PROGRAM* ") IS PROVIDED "AS IS" WITHOUT REPRESENTATION OR WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY REPRESENTATIONS OR ENDORSEMENTS REGARDING THE USE OF, THE RESULTS OF, OR PERFORMANCE OF THE PROGRAM OR APPLICATION, ITS APPROPRIATENESS, ACCURACY, RELIABILITY, OR CURRENTNESS. THE ENTIRE RISK AS TO THE USE OF THIS PROGRAM IS ASSUMED BY THE USER. IN NO EVENT WILL THE CREATORS OR DISTRIBUTORS OF THE PROGRAM BE LIABLE FOR TORT OR ANY DAMAGES, INCIDENTAL OR CONSEQUENTIAL, DIRECT, INDIRECT, RESULTING FROM ANY DEFECT IN THE PROGRAM, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THIS DISCLAIMER SHALL SUPERSEDE ANY VERBAL OR WRITTEN

STATEMENT TO THE CONTRARY. SOME STATES OR COUNTRIES MAY NOT ALLOW THIS DISCLAIMER SO THIS LANGUAGE MAY NOT APPLY TO YOU. IN SUCH CASE, OUR LIABILITY SHALL BE LIMITED TO THE REFUND OF THE PURCHASE PRICE OF THE PROGRAM.

IF YOU DO NOT ACCEPT THESE TERMS YOU MUST CEASE AND DESIST USING THIS PRODUCT.

LICENSE TERMS

The extended fax support features of the **FAXSupport System** and **electronic documentation** (the "*Software*") are copyrighted 1993,1994, 1995 by Computer Enhancements, and are protected by United States Copyright Law and International Treaty provisions. All rights are reserved. The ORIGINAL PURCHASER ("*You*") is granted a LICENSE to use the Software only, subject to the following restriction and limitations.

1) New users have a 30 day evaluation period, after which they must either:

a) Purchase the Software

-- or --

b) Destroy all copies, including all documentation and compressed versions of the Software.

2) The license is to the original purchaser only, and is not transferable without the written permission of Computer Enhancements.

3) You have the non-exclusive right to use any enclosed program only on a single computer at a time. You may load the program into your computers temporary memory (RAM). You may physically transfer the program from one Computer to another, provided that the program is used on only one computer at a time.

4). Back-ups: You may make copies of the Software solely for back-up purposes. You must reproduce and include any copyright notices on the back-up copy.

5) You may not engage in, nor permit third parties to engage in, any of the following:

- a) Providing or permitting the use of or disclosing the Software to third parties
- b) Provide use of the Software in any multi-user environments where more than one user has access and use of the Software at any one period of time.
- c) Making alterations, translations or copies of any kind in the Software or documentation (except as specifically permitted in the license).
- d) Attempting to disassemble, decompile, or reverse engineer the Software in any way.

e) Granting sub-licenses, lease or other rights in the Software to others.

6) Terms - This license is effective until terminated. You may terminate it by destroying the program, the documentation and copies thereof. This license will also terminate if you fail to comply with any terms or conditions of this agreement. You agree upon such termination to destroy all copies of the program and of the documentation.

7) Computer Enhancements reserves the right to make any changes to the Software at any time without notice.

Computer Enhancements reserves the right to terminate this license if there is a violation of its terms or default of the Original Purchaser. Upon termination for any reason, all copies of the Software must be immediately destroyed, and the Original Purchaser shall be liable for any and all damages suffered as a result of the violation or default.

U.S. Government Restricted Rights

The Software and Documentation are provided with RESTRICTED RIGHTS. Use, duplication, or disclosure by the U.S. Government is subject to restrictions set forth in subdivision (b)(3)(ii) of The Rights in Technical Data and Computer Software clause at 252.227.7013.

This agreement shall be construed, interpreted and governed by the laws of the State of California, United States of America.

The Shareware Concept

Shareware is copyrighted software which is distributed by authors through bulletin boards, on-line services, disk vendors, and copies passed among friends. It is commercial software that you are allowed to try before you pay for it. This makes shareware the ultimate in money back guarantees.

Most money back guarantees work like this: you pay for the product and then have some period of time to try it out and see whether or not you like it. If you don't like it or find that it doesn't do that you need, you return it and you get your money back. Some software companies won't even let you try their product because in order to qualify for a refund, the diskette envelope must have an unbroken seal.

With Shareware you get to try it for a reasonable limited time (like 30 days), without spending a penny. You are able to use the software on your own system(s), in your own special work environment, with no sales people looking over your shoulder. If you decide not to continue using it, you throw it away and forget all about it. No paperwork, phone calls, or correspondence to waste your valuable time. If you do continue using it, then - and only then - do you pay for it.

Shareware is a distribution method, not a type of software. Shareware is produced by accomplished programmers, just like retail software. There is good and bad shareware, just as there is good and bad retail software. The primary difference between shareware and retail software is that with shareware you know if it's good or bad before you pay for it.

As a software user, you benefit because you get to use the software to determine whether it meets your needs before you pay for it, and authors benefit because they are able to get their products into your hands without the hundreds of thousands of dollars in expenses it takes to launch a traditional retail software product. There are many programs on the market today that would never have become available without the shareware marketing method.

The shareware system and the continued availability of quality shareware products depend on your willingness to register and pay for the shareware you use. It's the registration fees you pay which allow us to support and continue to develop our products. Please show your support for shareware by registering those programs you actually use and by passing them on to others.

Shareware is kept alive by your support !

International Users

Macro language differences:

Microsoft developed many different language versions of WinWord, unfortunately they have not allowed an easy way for the programmer of Macros (and other WordBasic utilities) to install and work on these multi-lingual systems. This version of the FAXSupport System includes an installation routine that should at least allow the routines to be added to user's menu and tested.

While we are very interested in expanding our support of other foreign language versions of WinWord, Microsoft has not documented the majority of language differences and hence our support may be very limited, if it works Great, else sorry not much we can do to fix it!.

Basically, each foreign language version of WinWord uses a different for various macros and commands. While this is very important for the users, it does not allow for the

installation of the same macro across multi-language systems. For Example, the English WordBasic command to return the number of open windows is n=Window(), while in the Dutch version is n=Venster(), the French version is n=Fenêtre() and in Portuguese it's n=Janela().

Our hopes are than in the next release of WinWord (version 7.0 or maybe they will call it WinWord '95 ??), Microsoft will include 'true' international support, much like Excel 5.0 has with it's VBA language. A letter from you to your local Microsoft subsidiary expressing your hopes of a truly international version, would help you to have access to the vast amount of information and support utilities that you are currently excluded from.

International Payment methods:

Payment from outside the United States can be made by one of the following methods:

- a) International users with US dollar checking accounts can use these accounts for payment.
- b) Users can get bank drafts (cashier's checks) in US dollars from their local bank, to pay for the registration fee. Unfortunately Eurochecks can not be used since the charges are over \$ 40.00 for a US bank to clear the check.
- c) The best method for CompuServe users, is to use the SWREG service to pay for the registration fees. See for more details on this service.
- d) or you can use your credit card. See for more details on this service.
