

12Ghosts JumpReg

Manage your registry keys

ZDNet "5 Star"

Jump to registry keys from a tray icon! This is a surprisingly useful tool. You can manage and directly jump to frequently accessed registry keys. Unlimited list size, jump to keys *and values*, get current key with a click, jump to key in clipboard, close on jump, and more. Manage and sort keys with descriptions. Tray icon menu, create shortcuts.

How to... for JumpReg

You want to **sort** items in the list? Then use the up-down control at the left of JUMP.

You want to jump to the **key in clipboard**? Then right-click on the tray icon and select Jump to Key in Clipboard.

You want to jump to the same key but under Current User or Local Machine, respectively? Then right-click on the tray icon and select Same Key CURRENT USER or Same Key LOCAL MACHINE.

You want to **save changes** in the list but not close the window? Then hold CTRL and press OK.

You want always to **save/close on jump**? Then select the options in the lower right to save settings on jump and/or close the window.

You want to override the **save/close** options quickly? Then hold **SHIFT** while jumping. This will jump, save options, and close the window.

You want to switch off **automatic import of shortcuts**? Then add the DWORD value "ImportShortcuts" under HKEY_CURRENT_USER\Software\PACT Software\JumpToRegKey and set it to zero 0.

You want to add a **separator** in the menu? Then add an empty key with a minus sign – for its description.

You want to **break** the menu? Then add a forward slash / at the end of the description.

You don't like the **CU, CR** etc. when getting keys? You want to have CU, CR at the end, not at the beginning? Then add the DWORD values "AbbrBegin" and "AbbrEnd" under HKEY_CURRENT_USER\Software\PACT Software\JumpToRegKey (1=enabled, 0=disabled)

New

- Supports Jump-to-Values: just add the value name after a double-backslash.
- JumpReg also supports General Options. You can select the tray and movable icon, specify the startup behavior, choose the animation, and save/restore all customized keys.
- Support for /s on the command line. With /s specified in a shortcut, no window is

displayed, just the icon will appear in the taskbar tray. In other words, as long as "/s" is not specified the JumpReg window now opens immediately!

Known Issues

- Note: JumpReg does utilize the functionality of the original Windows RegEdit. Yet trying to control RegEdit might not always work. You might encounter problems if RegEdit is busy. In this case, wait until RegEdit has finished what it is doing and is ready for input again.

- How fast RegEdit processes the JumpReg commands also depends on processor usage. You can try the following registry option to give RegEdit more time to process the input from JumpReg. It is a delay of milliseconds between each command.

HKEY_CURRENT_USER\Software\PACT Software\JumpToRegKey

DWORD: "Delay" Between 1 and 99. 1 is the fastest, the default. 99 is very slow.

- "Get Key" and "Same Key under..." do not work with RegEdit on Windows 95 without Service Release SR1 or SR 2 ([See Windows updates](#)).
