

# 747-400 PILOT OPERATION HANDBOOK

For use with X-Plane flight simulator only

by Mohammed Gazzawi & Sergio Santagada

Passengers	Typical 3-class configuration	416
Passengers	Typical 2-class configuration	524
Cargo*		6,025 ft <sup>3</sup> (170.5 m <sup>3</sup> ) or 5,332 ft <sup>3</sup> (151 m <sup>3</sup> )
Engines		Pratt & Whitney PW4062
maximum thrust		63,300 lb (28,710 kg)
		Rolls-Royce RB211-524H
		59,500 lb (26,990 kg)
		General Electric CF6-80C2B5F
		62,100 lb (27,945 kg)
Maximum Fuel Capacity		57,285 U.S. gal (216,840 L)
Maximum Takeoff Weight		875,000 lb (396,890 kg)
Maximum Range		8,430 statute miles (13,570 km) Typical city pairs: Los Angeles-Hong Kong, Los Angeles-Sydney, Singapore-London
Typical Cruise Speed at 35,000 feet		0.85 Mach - 565 mph (910 km/h)
Basic Dimensions	Wing Span	211 ft 5 in (64.4 m)
	Overall Length	231 ft 10 in (70.6 m)
	Tail Height	63 ft 8 in (19.4 m)
	Interior Cabin Width	20 ft (6.1 m)

\*6,025 ft<sup>3</sup> (170.5 m<sup>3</sup>) = 30 LD-1 containers; 5,332 ft<sup>3</sup> (151 m<sup>3</sup>) = 5 pallets, 14 LD-1 containers + bulk (one pallet = 96 in x 125 in/244 cm x 318 cm)

## Brief Description of the 747-400

The 747-400 is the latest derivative of the 747 family of airplanes. The -400 is externally similar to the 747-300, with the additional wingtip extension with winglets and advanced high bypass ratio engines. Other characteristics unique to the 747-400 include:

- Two-crew cockpit with digital avionics
- Lightweight aluminum alloys
- Structural carbon brakes
- Optional 875,000-pound maximum takeoff weight
- Optional 3,300-gallon fuel tank in horizontal stabilizer
- Vacuum lavatories with single-point servicing
- Enhanced passenger appeal in cabin interior
- Optional crew rest compartment in aft cabin
- Fly-by-wire system

### 747-400

The basic 747-400 has a tri-class passenger interior arrangement. Optional arrangements include a two-class or a one-class configuration to suit traffic demands.

### 747-400 Domestic

The 747-400D is a high-capacity airplane designed for domestic short routes. It has a lighter maximum takeoff weight. The -400D airplane has the same wingspan planform as the -300 and has no winglets.

### 747-400 Combi

The Combi airplane has a main deck cargo door installed on the left side aft of the wing. This door is used for loading pallets or containerized cargo up to 20 feet long. The main deck of the Combi airplane can be converted to either an all-passenger or a passenger/cargo configuration. In the latter configuration, cargo is in the aft fuselage. Several cargo configurations can be loaded compatible with size limits and operational procedures. The Combi can load up to seven 10-foot pallets or containers.

### 747-400 Freighter

The 747-400F freighter has a main deck nose door and a mechanized cargo handling system. The nose door swings up so that pallets or containers up to 40 ft (12 m) can be loaded straight in on motor-driven rollers. An optional main deck side cargo door (like the 747-400 Combi) allows loading of dimensionally taller cargo modules.

## Definitions

**Maximum Design Taxi Weight (MTW).** Maximum weight for ground maneuver as limited by aircraft strength and airworthiness requirements. (It includes weight of taxi and run-up fuel.)

**Maximum Design Landing Weight (MLW).** Maximum weight for landing as limited by aircraft strength and airworthiness requirements.

**Maximum Design Takeoff Weight (MTOW).** Maximum weight for takeoff as limited by aircraft strength and airworthiness requirements. (This is the maximum weight at start of the takeoff run.)

**Operating Empty Weight (OEW).** Weight of structure, powerplant, furnishing systems, unusable fuel and other unusable propulsion agents, and other items of equipment that are considered an integral part of a particular airplane configuration. Also included are certain standard items, personnel, equipment, and supplies necessary for full operations, excluding usable fuel and payload.

**Maximum Design Zero Fuel Weight (MZFW).** Maximum weight allowed before usable fuel and other specified usable agents must be loaded in defined sections of the aircraft as limited by strength and airworthiness requirements.

**Maximum Pay load.** Maximum design zero fuel weight minus operational empty weight.

**Usable Fuel.** Fuel available for aircraft propulsion.

**V1:** Go or No-Go Speed. The crew must rejected a Take-Off before reaching this speed in order to safely stop on remaining runway.

**Vr:** Rotation Speed. At this speed the crew begin to rotate the plane, smoothly nose-up to reach the max 8 deg of pitch attitude before the plane has left the runway, then the crew will carefully increase the pith up to 10/12 deg and they will maintein this attitude till the V2 +10 kt

**V2:** Take-Off safety Speed. Overstepping V2, with increasing speed .... gear up.

**N1:** Engine Fan Speed. N1 is used as a percentage of the max power. Normally the turbofans of the engines can overrun the 100% of N1 for short periods of time.

## Measures

	ft	m		ft	m		ft	m

## Operating Performance 747-400 (KIAS/Mach)

### **V<sub>A</sub> - Design Maneuvering Speed (KIAS/Mach)**

Sea Level	10,000ft	20,000ft	29,000/40,000ft
300	315	330	336/0.86

<b>V<sub>LO</sub></b>	270/0.82	Max Speed @ Gear Retraction
<b>V<sub>LO</sub></b>	270/0.82	Max Speed @ Gear Extension
<b>V<sub>LE</sub></b>	320/0.82	Maximum Airspeed with Gear Extended

**Maximum Tire Limit Speed** 204 Kt

<b>V<sub>NO</sub>/M<sub>NO</sub></b>	0.85	Normal Operating Speed
<b>V<sub>ne</sub>/M<sub>ne</sub></b>	365/0.89	Never Exceed Speed

### **V<sub>MO</sub>/M<sub>MO</sub> - Max. Operating Limit Speed (KIAS/Mach)** - Shall not be exceeded during any phase of flight

20,000 ft & Lower	25,000ft	30,000ft	35,000	40,000ft
365	365/0.88	340/0.90	309/0.90	269/0.90

**V<sub>at</sub>** 150 –156 KIAS Landing @ Runway Threshold Speed @ MLW full flap/Gear down

### **Maximum Turbulent Air Penetration Speed (KIAS/Mach)**

250	15,000 ft and Lower alt.	290 / 0.78	15,000 ft and Higher alt.
-----	--------------------------	------------	---------------------------

### **Taxi Speed**

Straight Taxiway	45 deg Turn	90 deg Turn
25 Kt	15 Kt	10 Kt

### **Max Slats/Flaps Extension Speed V<sub>fe</sub> in KIAS**

Config	Slats/Flaps		
1	Slats (inboard + Midspan only)	280	Intermediate Approach
5	Full Slats + Flaps @ 5 deg	260	Intermediate Approach
10	Full Slats + Flaps @ 10 deg	240	Take-Off & Approach
20	Full Slats + Flaps @ 20 deg	230	Take-Off & Approach
25	Full Slats + Flaps @ 25 deg	205	Landing
30	Full Slats + Flaps @ 30 deg	180	Landing

## Flaps/Slats Selection

Take-Off	10, 20
Approach	10, 20, 25
Landing	25, 30

## Take-off speed @ MTOW (875,000 Lbs) Flaps at 10 - 20 (MTOW = Max Take-Off Weight)

	Flaps 10	Flaps 20		
V1	159 (155*)	154 (148*)	KIAS	(V1 is the go or no-go decision speed)
VR	177	170	KIAS	(VR is the rotation speed ie lift-off speed)
V2	188	181	KIAS	(V2 is the safe climb-out speed)

\* with wet/cluttered conditions

## Take-off speed @ DXPW (635,000 Lbs) Flaps at 10 - 20 (DXPW = Default X-Plane Weight)

	Flaps 10	Flaps 20		
V1	129 (127*)	127 (129*)	KIAS	(V1 is the go or no-go decision speed)
VR	143	138	KIAS	(VR is the rotation speed ie lift-off speed)
V2	161	155	KIAS	(V2 is the safe climb-out speed)

\* with wet/cluttered conditions

70 / 21	105.2	106.3	107.3	108.0	109.8	109.9	109.9	109.9
60 / 16	104.3	105.4	106.6	107.3	108.9	109.6	109.9	109.9
50 / 10	103.0	104.3	105.4	106.4	108.2	108.9	109.8	109.9
40 / 4	102.1	103.4	104.6	105.7	107.3	107.8	108.7	109.9
30 / -1	101.4	102.7	103.9	104.8	106.4	106.9	107.8	109.2
20 / -7	100.3	101.6	102.8	103.9	105.3	105.8	106.9	108.1
10 / -12	99.4	100.7	101.9	103.0	104.4	104.9	105.6	107.2
0 / -18	98.4	99.6	100.8	101.9	103.3	103.9	104.7	106.2
-20 / -29	96.4	97.6	98.9	99.9	101.4	101.9	103.7	104.2

The Maximum Allowable N1 is 117.5% for shorts periods

To determinate the correct N1 setting in various temperature/altitude configurations follow these steps:

read the Outside Air temperature, read the pressure altitude of the departure airport then choose the correct N1 value from the above table.

## Climb Speeds

Typical Climbing speeds	250 KIAS	to 10,000 feet
	300 KIAS	to FL310 (31,000 ft)
	0.80 Mach	above FL310 (31,000 ft)

## Cruise Speeds are in KTAS ( Knots True Air Speed)

Max Cruising speed	507 KTAS	
Cruise Speed	490 KTAS	@ 28,000 – 35,000ft
Typical Cruise Speed is	0.80 - 0.85 Mach	@ FL280 - FL350 (30,000-35,000ft)
Long Range Cruise is	496 KTAS	@ FL350 (35,000 ft)

## Descent Speeds

Typical descending speeds	0.80 Mach	to FL340 (34.000 ft)
	300 KIAS	between FL340 (34,000 ft) and 10,000 ft
	250 KIAS	below 10,000 ft

When flying long routes (over 5hrs) with MTOW, climb to FL300 & hold Alt with cruise speed 0.80 - 0.81 Mach , then fly that level for 30-45 min. then climb to FL310 - 320 @500 fpm and so on until you reach FL350 @ 0.80 - 0.85 Mach.

Try not exceed 91% N1 during cruise in order to have available thrust for emergencies & be more efficient with fuel burn. The reason we mentioned the above procedure with X-Plane is to avoid too much nose pitch up attitude which put the aircraft wing @ higher angle of attack causing speed bleed leading to a clean stall if you are not careful.

The time taken between cruise climb is important because the aircraft will burn fuel (losing weight), your speed will gradually increase @ the same N1 setting , your aircraft pitch up will decrease helping you for the next cruise climb. Rate of climb at these alts should be between 300-500 fpm in order not to lose speed rapidly. The more you climb to FL350 the more the air density is less the better the engine fuel consumption (more range) & the less is thrust. You should carry fuel enough for the flight + 40 minutes for diversions & emergencies i.e. if your trip is 5hrs long, you load fuel for the required 5hrs flight plus fuel for an extra 40 min. You should know your aircraft average fuel consumption for the type of engines fitted with in order to determine the fuel weight required for the flight. Remember that weight is drag, drag is more fuel burn which costs money (for virtual pilots flying for virtual airlines :), so do not carry fuel more than you need. You have a destination to go to & MLW limit. You do not want to arrive to your destination with total weight above MLW!.

In order to determine the fuel weight required for the flight, you need to know the trip length. For that, you can use PATHy 1.5, an interactive flight planner for X-Plane by Roland Voegtli downloadable at <http://x-plane.org/registry/Utilities/Utility/> .

Following the table below, choose the fuel quantity to load and add extra fuel for 40 min (see at the bottom of the table).

**Fuel Load**

Trip Length Nm	FL410 @ 479Kt		FL390 @ 479Kt		FL370 @ 479Kt		FL350 @ 481Kt		FL330 @ 486Kt		FL310 @ 488Kt

FL330	740,000	335,000	810,000	367,500
FL320	770,000	350,000	840,000	385,000
FL310	810,000	367,500	870,000	395,000
FL300	840,000	385,000	-	-

## FAR Field Lengths

Take-off	10,561 ft @ MTOW
Landing	7,870 ft @ MLW

## Take-off Check List

Allowable Take-off Weight (MTOW or lower)	Checked
Flaps	Set
Trim	Set
Autopilot Controls	Off

## Final Landing Check List

Gear	Down
Flaps/Slats	Set 25 or 30
Speed Brakes	Armed
ILS freq	Tuned

## During Descent Check

Check Allowable Landing Weight (MLW 630,000 lb. or lower)  
Review your ILS approach & Runway heading

## ROC Rate Of Climb

Below 10,000ft max. 3,800 fpm @ 250kts (fpm is Feet per minute)

## Climb Speed above 10,000ft to Cruise Flight Level FL

2200 fpm	from	10,000 - 20,000 ft	@ 280 – 340 kts
2000 - 1500 fpm	from	20,000 - 26,000 ft	
1500 - 400 fpm	from	26,000 - 35,000 ft	depending on weight.

## ROD Rate Of Descent

From Cruise FL to 10,000ft hold 0.79 Mach until 290 kts, reduce thrust for 2500 fpm  
Below 10,000ft rate of descent varies with ATC requirements, but is between 800 - 3000fpm  
In normal conditions 250kts idle descent , then slow & configure speed so as to not add power until on Glide Slope. Use speedbrakes to slow down.

----- DO NOT Exceed 250kts @ or Below 10,000ft Altitude -----

Glide Slope descend is between 1500 - 500fpm depending on your situation  
At Runway Threshold descend between 400 - 200fpm for a smooth touchdown landing.  
B747-400 pilot eye view is high above ground so be aware of landings, this is not a B737!.

Happy X-Flight
