Version 5.3
^^^^^^^^^^^^^^
—You no longer have to restart to see changes made in the Control Panel.
—Fixed problem where menus would go away prematurely.   Also fixed problem with menus which displayed graphics.
—Menus would flash when the mouse pointer was dragged outside them to quickly.   Fixed.
—The expiration alert is not displayed at boot time anymore.   This caused to many bombs with incompatible inits.
—No more animated icon at startup.   Sorry, but this caused many problems with init managers.
—The extension code was completely rewritten.   It should be much more compatible and smoother running than previous versions.
—AutoMenus now checks to see what System its running under and takes appropriate action for each system.
