# Chapter 1

## PIEd

### 1.1 ProductInfo-Editor Documentation

ProductInfoEditor / by Thomas Igracki

A F D - C O P Y R I G H T

What should be in the archive?	The history of the program
What is it for?	How to contact me?
How to start?	Description of the menus
Product-Info fields	

The Magic-User-Interface	The TextField-Gadget
--------------------------	----------------------

-----

This software is subject to the "Standard Amiga FD-Software Copyright Note"  
 It is GIFTWARE as defined in paragraph 4g. [...]  
 For more information please read "AFD-COPYRIGHT" (Version 1 or higher).

### 1.2 PIEd/What should be in the archive?

The following files should be in the archiv:

help/deutsch/PIEd.guide	--> german documentation, AmigaGuide Format
help/deutsch/AFD-COPYRIGHT.de	--> german COPYRIGHT-Note
help/english/PIEd.guide	--> english documentation, AmigaGuide Format
help/english/AFD-COPYRIGHT	--> english COPYRIGHT-Note
Product-Info	--> Product-Info file for PIEd
PIEd.liesmich	--> short, german doc, ASCII
PIEd.readme	--> short, english doc, ASCII
PIEd.iff	--> IFF-Bild of PIEd displaying PIEd's product-info
PIEd	--> the main program

## 1.3 PIEd/What is this program for?

This program enables you to create the so called 'Product-Info' files 'easily' (mouse driven, and keyboard driven of course).

PIEd uses the MagicUserInterface by Stefan Stuntz and the TextFieldGadget by Mark Thomas.

Click on this button to get a first impresssion of PIEd.

On the left top there is a list with all available fields. If a field is used, it will be displayed in another color as if it is not used, to let you quickly see what fields you have defined and what not.

On right there are some string gadgets with the common fields you should define. You can do this by filling in the string gadgets or selecting a list entry and then typing in the editor.

In the middle (the biggest area) there is the TextFieldGadget, where you can see and type-in the contents of the current field.

At the bottom there are some buttons with the following action:

- Activate : Activate the editor (TextField-Gadget)
- Set : Write the contents of the editor to the field
- Get : Get the contents of the field and display it in the editor
- Clear : Clear the contents of the editor and the field

## 1.4 PIEd/How to start

Start from a shell:

```
[Run] PIEd [<ProductInfoFile>] [FOTL=FieldsOnTheLeft]
```

The parameter [<ProductInfoFile>] is optional!.

It specifies the pi-file, which should be loaded at startup.

The FOTL=FieldsOnTheLeft parameter specifies if the pi-fields should be placed totaly on the left side -> the list is bigger!

## 1.5 PIEd/Description of the menus

Project

New

Create a new file.

If you are currently editing a file which isn't saved yet, you will be confronted with a requester.

Open...

Open a new 'Product-Info' file.

There appears a file requester where you can choose a 'Product-info' file to be loaded.

It has to match the following AmigaDOS-Pattern:

---

```
(.Product-Info|.Produkt-Info|Product-Info|Produkt-Info|#?.pi)
Save
    Save the file.
Save as...
    Save a file with a requester.
Save as '.readme'
    Save the file as .readme, you have to specify the following fields for this:
    short, aminet-dir or type, author, version and description.
Save as '.liesmich'
    Save the file as .liesmich, you have to specify the following field for this:
    beschreibung
About...
    Display some informationen about PIEd.
About MUI...
    Display some informationen about MUI.
Hide
    Hide the window. You can pop it up with ExChange or the popup key
    (adjustable with MUI).
Quit...
    Quit PIEd, if you didn't saved the current file a requester appears.

Edit
Cut
    Cut any highlighted text to the clipboard.
Copy
    Copy any highlighted text to the clipboard.
Copy all
    Copy all of the gadget's text to the clipboard.
Paste
    Paste the text from the clipboard to the gadget.
Erase
    Delete any highlighted text.
Undo
    Delete any highlighted text, then insert the text
    from the undo buffer.
```

## 1.6 TextField-Gadget

PIEd uses TextField-Gadget by Mark Thomas v3.1 for displaying and editing. See aminet (dev/gui) for the archive.

Here is a part of the doc which keys are supported:

---

### DOCS FOR USERS

You can mark text for cutting, copying, and erasing by simply clicking and dragging. Hitting alphanumeric keys replaces the text that is highlighted. Hitting cursor keys moves you to the front or end of the highlighted text.

If your cursor is already somewhere in the textfield, you can hold the SHIFT key and click to mark the text from the current cursor position to the place where you clicked.

And the last way to mark text is to double-click, which will mark the word you clicked on. If you didn't click on a word, but rather you clicked on spaces, the whole block of spaces is marked. And if you clicked on word delimiters, the whole block of delimiters is marked.

While you drag to scroll, the farther away from the gadget your mouse pointer is, the faster the gadget will scroll.

For key sequences, the Amiga Style Guide was followed. Anywhere the undo buffer is mentioned, the statement is only valid if the UndoStream is supplied (see tag section below).

Key Sequence	Function
TAB	Activate next gadget (if GA_TabCycle)
SHIFT TAB	Activate previous gadget (if GA_TabCycle)
SHIFT CURSOR UP	Move to the top line in the current page, or scroll up one page if cursor is on top line
SHIFT CURSOR DOWN	Move to the bottom line in the current page, or scroll down one page if cursor is on top line
CTRL or SHIFT CURSOR RIGHT	Move to the right end of the current line
CTRL or SHIFT CURSOR LEFT	Move to the left end of the current line
SHIFT BACKSPACE	Delete all text to the left of cursor on the current line
SHIFT DELETE	Delete all text to the right of the cursor on the current line (in block cursor mode this also includes the highlighted character)
CTRL CURSOR UP	Move to the top line of the text
CTRL CURSOR DOWN	Move to the bottom line of the text
ALT CURSOR RIGHT	Move to the next word (using the delimiter characters provided by the programmer)
ALT CURSOR LEFT	Move to the previous word (using the delimiter characters provided by the programmer)
ALT CURSOR UP	Move to first character in gadget
ALT CURSOR DOWN	Move to last character in gadget
ALT BACKSPACE	Deletes the word to the left of the cursor starting at the current cursor position

ALT DEL	Deletes the word to the right of the cursor starting at the current cursor position
CTRL X	Deletes the whole line that the cursor is on
RAMIGA [	Switch to left justification (if TEXTFIELD_UserAlign is set)
RAMIGA \ or RAMIGA =	Switch to center justification (if TEXTFIELD_UserAlign is set)
RAMIGA ]	Switch to right justification (if TEXTFIELD_UserAlign is set)
RAMIGA E	Erase all text in gadget (saved in undo buffer) (no read-only)
RAMIGA V	Paste text from clipboard to current cursor position (no read-only)
RAMIGA A	Mark all text
RAMIGA U	Undeletes (pastes) the last block of text marked, or recover from RAMIGA E (no read-only)

When text is highlighted the following keys have functions:

BACKSPACE	Erase marked text (saved in undo buffer)
DEL	Erase marked text (saved in undo buffer)
RAMIGA X	Cut marked text to clipboard (no read-only)
RAMIGA C	Copy marked text to clipboard
RAMIGA V	Replace marked text with text from clipboard (save marked text in undo buffer) (no read-only)
(any text key)	Replace marked text with that character

## 1.7 PIEd/Programhistory

Release 1.0:

- 37.15 (28.05.96): New: If a field wasn't set and you select another one then a requesters appears asking if you would like to ↵ save.
- Chg: Now all last '\n' will be removed not just the last.
- New: Added field .uploader for writing .readmes.
- 37.14 (27.05.96): New: HelpNodes for the String-Gadgets
- New: The PI-Fields-Listview can be made larger if you use

- FOTL=FieldOnTheLeft/S on startup.  
 New: Menu/Settings/MUI added  
 : New: Menu "Project/SaveAs '.liesmich'
- 37.13 (01.05.96): New: 7 new fields (used in pitool) added:  
   .aminet-dir, .comment, .contents, .fax, .keywords, . ←  
   locale, .phone,  
 Chg: The .aminet-dir field is used for the "type:" line . ←  
   readme's  
   if available, else .type is used like before.  
 New: After succesfully saving a .readme a requester comes ←  
   saying  
   that it is saved.  
 New: The last \n of a field content will be removed on ←  
   setting.
- 37.12 (25.04.96): New: The user has control over left/center/right ←  
   justification  
   of text through RIGHT-AMIGA [,=,] keyboard shortcuts.  
 New: SPACE for activating the textfield.  
 New: Some more references to guide file.  
 New: rightAmiga RETURN for activating the textfield.  
 New: If you have made changes and want to quit, you will be  
   asked if you really want to quit, else quit immediatly.
- 37.11 (29.03.96): Fix: Changed the hotkeys of the editor buttons so they  
   can be used out of the editor gadget (with ramiga).
- 37.10 (01.03.96): New: WindowTitle displays the name of the file  
 New: Clipboard support for the editor.  
 New: Pass amiga-commands within the editor.
- 37.9 (23.11.95): Fix: Fix für MUI3, der Scrollbar fehlte bei den Listviews!
- 37.8 (31.10.95): Fix: fixed a small bug  
 New: Added field ".beschreibung" and ".release"
- 37.7 (04.09.95): New: Menu "Project/SaveAs '.Readme'"
- 37.6 (28.08.95): Bug: Das letzte Feld wurde nicht eingelesen.
- 37.5 (08.08.95): Data typed in string gadget will be recognized  
   and the FieldList will be updated.
- 37.4 (11.09.94):·Änd: Der 1. Parameter ist nicht mehr nötig, falls er  
   weggelassen wird, kommt ein FileRequester.
- 37.3 (27.08.94):·Neu: Project/Hide zum verbergen des Programms  
   ·Neu: ARexxPort-Name wird im About-Requester angezeigt
- 37.2 (23.08.94):·Bug: Falls die Datei ein Verzeichnis war oder nicht ←  
   existierte.  
   ·Neu: Menu "Edit/Copy" zum kopieren des Inhaltes des aktuellen ←  
   Feldes  
   ins Clipboard.  
   ·Neu: Jetzt werden nur noch die Felder angezeigt, die ←  
   vorhanden sind!
- 37.1 (13.08.94):·So, nun läuft's erstmal!  
   ·Shell-Support eingebaut
- 37.0 (12.08.94): Angefangen, da ich heute die FrozenFish CD bekam und ein  
   Programm brauchte, womit ich mir die Product-Info Files  
   komfortabel ansehen kann!  
   Erstmal die Oberfläche programmiert.

## 1.8 PIEd/How to contact me?

If you have suggestions, bug reports or any question you can reach me by the following addresses, e-mail preferred!

Z-Netz: T.Igracki@BAMP.berlinet.de  
FIDO : Thomas\_Igracki%2:2410/309.34  
UseNet: lokai@cs.tu-berlin.de -or-  
t.igracki@bamp.berlinet.de (preferred!)  
Mail : Thomas Igracki, Siegener Str. 34, Germany-13583 Berlin

If you want to send me some money for my work on PIEd, then send it by cash or transfer it to the following bank-account:

Thomas Igracki  
Account 860169138  
Sparkasse Berlin  
BLZ 100 500 00

Please add a note like "Gift for PIEd <Your name + email>".

If you send me an email, I will notify you if a new version is out and send it to you if desired!

At least you should write me an email if like my program!

Have fun with my program!

## 1.9 The Magic-User-Interface

This application uses

MUI - MagicUserInterface

(c) Copyright 1993/94 by Stefan Stuntz

MUI is a system to generate and maintain graphical user interfaces. With the aid of a preferences program, the user of an application has the ability to customize the outfit according to his personal taste.

MUI is distributed as shareware. To obtain a complete package containing lots of examples and more information about registration please look for a file called "muiXXusr.lha" (XX means the latest version number) on your local bulletin boards or on public domain disks.

If you want to register directly, feel free to send

DM 30.- or US\$ 20.-

to

Stefan Stuntz

---

Eduard-Spranger-Straße 7  
80935 München  
GERMANY

## 1.10 Product-Info fields

The following are the fields defined by the Product-Info Specification v6 as designed by Fred Fish and Udo Schuermann (with some extra fields used by pitool!).

address	aminet-dir	author	construction
comment	contents	date	described-by
description	distribution	docs	email
exectype	fax	fullname	installsize
keywords	locale	name	phone
price	reference	requirements	restrictions
run	short	source	stored-in
submittal	tested	type	version

Now three I have added:

beschreibung	release	uploader
--------------	---------	----------

## 1.11 Product-Info field: .address

```
.address:
  <<<OPTIONAL>>>
  PURPOSE:      Describe a full postal address of the author, to
                  be used if it becomes necessary or desirable to
                  contact the author. Do not specify the author's
                  name, as this is already in the author field.
  FORMAT:       Multiple lines; formatting symbols n are not
                  required, as physical line breaks are equivalent.
  NOTES:        SEE THE author FIELD FOR IMPORTANT INFORMATION
```

## 1.12 Product-Info field: .aminet-dir

```
.aminet-dir:
  <<<OPTIONAL>>>
  PURPOSE:      Sets the directory where to put it on aminet.
  FORMAT:       1 line, see below for a list of possible strings.
  NOTES:
```

All directories on Aminet

### 1.13 Product-Info field: .author

```
.author:
  PURPOSE:      Any and all authors who have a part in the program
  FORMAT:       Any number of lines, treated as one line (n in the
                  text will "break up" the line into multiple visual
                  lines.)
  EXAMPLE:      Joe R. User, Tea Rexx.
  EXAMPLE:      J. Jonesn
                  Random Hackern
                  B. Clinton
  NOTES:        Addresses should be placed in the address field.
                  There should be only one address field for each
                  author field.
                  If more than 1 author field is specified, then the
                  same number of address and email fields must also
                  be given in a 1-to-1 relationship (i.e. the 3rd
                  author field must be associated with the 3rd
                  address, and the 3rd email field.)
                  EX: see the example "Joe R. User, Tea Rexx" above;
                  Assume that Joe R. User has long vanished and no
                  known address, but that Tea Rexx has supported the
                  program for a while.  If an address and/or email ↵
                               field is available for Tea Rexx, then ↵
                               you must
                               specify EMPTY address and/or email fields for the
                               author listed BEFORE the ones for Tea Rexx.
                               Likewise, if the two authors names were reversed,
                               you would NOT have to specify blank address and/or
                               email fields for the second author.  I hope that
                               makes sense.
```

### 1.14 Product-Info field: .construction

```
.construction:
  <<<OPTIONAL>>>
```

PURPOSE: Describe the type of language(s) used to create this program and the methods used to build the final executable. If possible, include the compiler version(s) and possibly important options, such as optimization.

FORMAT: Free form; see description for more information.

EXAMPLE: SAS/C++ 6.5 with full optimization.

EXAMPLE: AdaEd.

EXAMPLE: Fortran with self-made compiler.

EXAMPLE: AMOS

NOTES: This is usually closely related to the exectype field but differs from it in that the exectype might be "Compiled C" but the compiler used was "RottenC 0.97"

### 1.15 Product-Info field: .comment

.comment:  
<<<OPTIONAL>>>  
PURPOSE:  
  
FORMAT:  
  
NOTES:

### 1.16 Product-Info field: .contents

.contents:  
<<<OPTIONAL>>>  
PURPOSE:  
  
FORMAT:  
  
NOTES:

### 1.17 Product-Info field: .date

.date:  
PURPOSE: The program's official release date; not the date it made it into the database.

FORMAT: year.month.day  
1 line only

EXAMPLE: 1993.09.27

NOTES: The date format is chosen to be easily sortable. Note the use of leading zeros in month and day. The full year is to be given in anticipation of the coming change to a new millenium.

---

## 1.18 Product-Info field: .described-by

```
.described-by:
    <<<OPTIONAL>>>
    PURPOSE:      Specifies who created the description (Product-Info
                   file) for the program.
    FORMAT:       Free form; should include an electronic mail
                   address, too, if available.
    EXAMPLE:      Fred Fish (fnf@fishpond.cygnus.com)
    EXAMPLE:      Udo Schuermann <walrus@wam.umd.edu>
```

## 1.19 Product-Info field: .description

```
.description:
    PURPOSE:      A full-text description of your program, containing
                   anything that is NOT ALREADY available through the
                   other fields (see above and below.) The reader
                   should gain a good understanding what your program
                   can and cannot do. If you mention other programs
                   please do not forget to provide a reference field
                   for each such mention.
    FORMAT:       Any number of lines, treated as one line.
                   Formatting is permitted, but generally discouraged.
    NOTES:        Do not indent your text if you choose to format
                   your text into multiple paragraphs. Do not use t
                   as a tab. Leave paragraph formatting to KingFisher.
```

## 1.20 Product-Info field: .distribution

```
.distribution:
    <<<OPTIONAL>>>
    PURPOSE:      Describes the distribution and ownership status
                   of this software. Please see below for a list of
                   common (and recommended!) terms to use.
    FORMAT:       1 line
    EXAMPLE:      Shareware
    NOTES:        Please see the table below for descriptions of the
                   recommended terms.
```

### LIST OF SOFTWARE STATUS KEYWORDS

Commercial Commercial software is owned and distributed through licenses. It costs money to individual end-users and is not freely distributable. SUCH PIECES SHOULD NOT APPEAR ON DISKS THAT ARE MEANT FOR FREELY DISTRIBUTABLE SOFTWARE!

Commercial Demo Represents a demonstration of a commercial package. As such, commercial demos are freely distributable and may have limitations as described in the .limitations field.

Giftware Like shareware, usually.

Shareware Such software is owned and copyrights are held by the author(s). The software may be distributed freely, but not sold for profit, of course. Shareware often specifies a limit of some time after which you are requested or required to register the software (i.e. pay for it.) This provides you with the means to evaluate the software thoroughly before paying for it.

Freeware Such software is owned and copyrights are held by the author(s). The software may be distributed freely, but not sold for profit, which would mean the software is no longer FREeware. No payments are required for such software.

Public Domain Software labeled PD (Public Domain) belongs to the public, i.e. ANYONE. Some people release their software into the public domain with the mistaken idea that they can continue to own and control the program. Not so. Software that is labeled Public Domain (or said by the author to be released into the public domain) truly belongs to anyone and everyone. It is quite legal for someone to take such a program and sell it for profit as is. Likewise, it is perfectly acceptable to modify public domain software to build a better product (or whatever) out of it and then sell it for profit.

#### GNU Public License

The terms and conditions of this license are long and not easily reproduced here. Suffice to say that software released under the GNU Public License must be distributed with source code. They are not public domain, however.

#### GNU Library Public License

The terms and conditions of this license are long and not easily reproduced here. Suffice to say that software released under the GNU Library Public License must be distributed with source code. They are not public domain, however.

#### Copyright but Freely Redistributable

The author holds all copyrights but allows the material to be freely distributed under specified conditions.

## 1.21 Product-Info field: .docs

---

```
.docs:
<<<OPTIONAL>>>
PURPOSE:    List all documentation files, possibly for viewing
             from within KingFisher for more detailed info.
FORMAT:     1 line per file
EXAMPLE:    HomeBase.guide
             HomeBase.dvi
             HomeBase.doc
NOTES:      KingFisher examines the EXTENSION and invokes the
             appropriate viewing tool: MultiView/AmigaGuide for
             .guide files, ShowDVI for .dvi files, more for
             anything else. These files can also be sent to the
             printer via KingFisher (i.e. print .ps or .doc
             files.) KingFisher will honor the PAGER
             environment variable (defaults to 'more') to
             display standard text.
NOTES:      Omit any path to these files, unless it is a
             relative path from within the program's CD-ROM or
             disk directory. Do not specify these files if
             they are located within archive files; remember:
             the files must exist as they are given here!
```

## 1.22 Product-Info field: .email

```
.email:
<<<OPTIONAL>>>
PURPOSE:    Describe a full electronic mail address. Make
             sure that this address is complete and reachable
             even from less well-connected sites. The author
             of KingFisher, for example, can be reached as
             walrus@wam.umd.edu
             It would be an error to specify only "walrus" or
             "walrus@wam" even though these will work within
             the particular organization where this address
             is valid.
FORMAT:     Multiple lines; formatting symbols n are not
             required, as physical line breaks are equivalent.
             Do not specify more than one email address per
             line. The more you abide by RFC-822 specifications
             the better.
EXAMPLES:   walrus@wam.umd.edu (Udo Schuermann)
             Udo Schuermann <walrus@wam.umd.edu>
             "Udo Schuermann" <walrus@wam.umd.edu>
             <walrus@wam.umd.edu> Udo Schuermann
NOTES:      You may specify multiple electronic mail addresses
             in order of decreasing reliability and permanence,
             each on its own line.
             SEE THE author FIELD FOR IMPORTANT INFORMATION
```

## 1.23 Product-Info field: .exectype

```
.exectype:
  <<<OPTIONAL>>>
  PURPOSE:      Describe the type of executable(s) that make up
                  your program. Examples: 68xxx, AMOS, Script,
                  ARexx, Compiled basic, Amigabasic, etc.
  FORMAT:       Free form; see description for more information.
  EXAMPLE:      AMOS
  EXAMPLE:      68000, 68020, and 68040.
  EXAMPLE:      Compiled BASIC
  EXAMPLE:      Compiled ARexx
  NOTES:        AMOS-based software has been said to not work on
                  some systems at all; this entry allows a user to
                  determine if the software is worth obtaining in the
                  first place.
```

## 1.24 Product-Info field: .fax

```
.fax:
  <<<OPTIONAL>>>
  PURPOSE:

  FORMAT:

  NOTES:
```

## 1.25 Product-Info field: .fullname

```
.fullname:
  <<<OPTIONAL>>>
  PURPOSE:      The program's full (or complete) name
  FORMAT:       1 line only
  EXAMPLE:      Amiga Intuition Based Benchmarks
  EXAMPLE:      GNU C Compiler
  NOTES:        If the name is not an abbreviation then omit the
                  fullname. No sense in giving the name twice!
```

## 1.26 Product-Info field: .installsize

```
.installsize:
  <<<OPTIONAL>>>
  PURPOSE:      Indicate the minimum and maximum sizes of the
                  executable as it is installed. The minimum size
                  should give an indication of how much disk space
                  is required for a minimal installation (perhaps
                  lacking help files and miscellaneous tools) while
                  the maximum size should indicate the absolutely
                  highest amount of disk space required by the
                  program.
  FORMAT:       1 or more lines; Only the first line has a fixed
```

---

```
format, the rest are free-form. See examples.
Always indicate the number scales with a capital
K (for kilobyte) or M (for megabyte)
EXAMPLE: 220K - 2M
Most of the database files can be kept on floppy
disks, so valuable harddisk space is not wasted.
EXAMPLE: 18K
EXAMPLE: 38K - 500K
Lots of documentation and example scripts make up
the bulk of the installation.
```

## 1.27 Product-Info field: .keywords

```
.keywords:
<<<OPTIONAL>>>
PURPOSE:

FORMAT:

NOTES:
```

## 1.28 Product-Info field: .locale

```
.locale:
<<<OPTIONAL>>>
PURPOSE:

FORMAT:

NOTES:
```

## 1.29 Product-Info field: .name

```
.name:
PURPOSE: The program's name
FORMAT: 1 line only
EXAMPLE: KingFisher
EXAMPLE: HomeBase VI
EXAMPLE: AIBB
EXAMPLE: gcc
```

## 1.30 Product-Info field: .phone

```
.phone:
<<<OPTIONAL>>>
PURPOSE:
```

---

FORMAT:

NOTES:

### 1.31 Product-Info field: .price

.price:

<<<OPTIONAL>>>

PURPOSE: Describes the cost of this program to the user.

FORMAT: Any number of lines, treated as one line.

EXAMPLE: \$50 (US), DM75.

NOTES: In order to make this field more useful, it is STRONGLY recommended that the FIRST currency listed is United States Dollars as shown in the EXAMPLE above. This allows a search to be limited to a common price base. If you charge no money for this program, omit this field!

### 1.32 Product-Info field: .reference

.reference:

<<<OPTIONAL>>>

PURPOSE: Full path to where this program's files are stored, as well as the version that is stored there.

FORMAT: 2 lines per reference: the first line specifies the full path (with trailing slash) and the second line, the version.

NOTES: Multiple such fields may be provided to reference previous versions of this program, as well as other programs that might be of interest. The versions should be listed in reverse chronological order and SHOULD include the CURRENT entry. Please note that it is VERY VERY VERY important that you specify the CORRECT PATH! Without a correct path, this entry will be nearly useless! SPECIFY THE PATH WITH A NEW SUBMISSION ONLY IF YOU KNOW WHERE IT IS STORED; NEW SUBMISSIONS WILL HAVE A PATH ASSIGNED HERE AUTOMATICALLY. YOU SHOULD PROVIDE THE PROPER PATHS TO KNOWN AND EXISTING SOFTWARE.

EXAMPLE: FishROM-0002:Productivity/Databases/HomeBase VI/  
417.0  
FishROM-0001:Productivity/Databases/HomeBase VI/  
415.12

### 1.33 Product-Info field: .requirements

.requirements:

PURPOSE: List requirements for your program. These should give the reader enough information to determine if

---

the software will run on his/her system or not. Be sure to specify operating system versions, (hard)disk space requirements, etc. If your program requires any external libraries that are not part of the system software, it would be nice to list them here and comment on whether or not they are included in the archive. If your program is known to run on every existing (Amiga) platform, state this in this field!

FORMAT: Free form; see description for more info.

EXAMPLE: 68020, 68030, or 68040 CPU; 3M free RAM; 18M disk space; at least 640x480 display capabilities!

EXAMPLE: Requires WB2.1 (V38)

EXAMPLE: Requires 1024x768 (or larger) display capability.

EXAMPLE: Works only with 4096-channel, 230db BLAZETHUNDER Audio board.

EXAMPLE: Requires MUI (MagicUserInterface) version 5.

### 1.34 Product-Info field: .restrictions

.restrictions:

PURPOSE: List restrictions placed upon this program. These should indicate in which way this program has been made dysfunctional (for demo purposes), problems (bugs) known to exist with this program, or any other thing that lets the user know that this program, as seen in this distribution, may not fully satisfy the user in some form.

FORMAT: Free form; see description for more info.

EXAMPLE: Demo version has SAVE and PRINT options disabled.

EXAMPLE: The ReadOperatorsMind command fails to work with CDTV units. Incompatible with the Discus Ejector utility.

EXAMPLE: Crashes if iconified while loading a sample or image larger than 64K.

EXAMPLE: Requires a PAL display.

EXAMPLE: The program is in German but the documentation offers translations into English and Swahili on a menu-by-menu and gadget-by-gadget basis.

NOTES: Do NOT use this field for things like "won't work with KS 1.3" or "won't run with less than 2 Megs of RAM."

### 1.35 Product-Info field: .run

.run:

<<<OPTIONAL>>>

PURPOSE: Specifies how to start the program.

FORMAT: visible=type,command  
Where 'type' is either WB or CLI to indicate the required startup environment.

EXAMPLE: HomeBase VI=WB,HomeBase VI

```

HomeBase VI=CLI,ExecuteMe.HB6
HomeBase VI Fixer=CLI,ExecuteMe.HB6Fixer
EXAMPLE: FishTub=WB,ExecuteMe
NOTES: KingFisher requires that this entry strictly
follows the above format.
The user is shown all text up to the first equal
sign (the 'visible' portion.) The 'type' portion
must be terminated with a comma (,) and following
it will be the command to be executed.
Selecting it will either invoke the program from
the Workbench (invoking it as if double clicked on
its icon (if the .info file exists), or execute the
indicated shell command line as if it has been
typed at an open console window.
```

### 1.36 Product-Info field: .short

```

.short:
<<<OPTIONAL>>>
PURPOSE: A one-line description, preferably not exceeding
40 characters in length. This description is to
give a single-glance insight into the program's
purpose.
FORMAT: 1 line only.
EXAMPLE: Software catalog/search/maintenance tool, multi-user.
```

### 1.37 Product-Info field: .source

```

.source:
<<<OPTIONAL>>>
PURPOSE: Describe what source code is available with this
program. If source code is not available then
omit this field. The construction field often
helps further identify the type of source if you
omit details here. How large is the source?
FORMAT: Free form; see description for more information.
EXAMPLE: SAS/C,Manx,DICE source (750K) available for $15
EXAMPLE: Oberon source included. 85K
EXAMPLE: Limited C source (15K) included.
EXAMPLE: All source plus custom libraries, included: 12MB
```

### 1.38 Product-Info field: .stored-in

```

.stored-in:
PURPOSE: Specifies where and especially HOW the application
is stored. This field should specify EITHER the
name of a directory (ending with a : or a /) OR the
name of a file (one that does NOT end with : or /)
FORMAT: 1 or more lines.
EXAMPLE: FF1000:Disks701-1000/Disks941-960/Disk950/Enforcer/
```

FF1000:BBS/Disks501-1000/Disks941-960/Disk950/Enforcer.lha

NOTES: It is up to the particular application to decide how to handle this information. If the extension on the file is .lha, .lzh, .Z, .zoo, .pak, .zip, etc. then you could, for example, call upon the archiver of choice to unpack the application into a temporary directory and let the user run the program or list the files, or whatever.

### 1.39 Product-Info field: .submittal

.submittal:  
 <<<OPTIONAL>>>  
 PURPOSE: Identifies who submitted the program to Fred or else how this program came to be on the reference disk.  
 FORMAT: Free form; usually one line.  
 EXAMPLE: Submitted on disk directly by the author.  
 EXAMPLE: Downloaded from wuarchive.wustl.edu in pub/aminet/util/misc

### 1.40 Product-Info field: .tested

.tested:  
 <<<OPTIONAL>>>  
 PURPOSE: Give an indication of which configurations have served as test environments.  
 FORMAT: Free form; see description for more information.  
 EXAMPLE: A500(512K Chip, 0K Fast, 1 Floppy), A2000(1M Chip, 2M Fast, 40M HD, 1 Floppy); not tested on 68020+ CPUs.  
 EXAMPLE: A1000, A500, A600, A2000, A2000/30, A3000, A1200, A4000/30, A4000/40 with various amounts of Chip and Fast RAM, with and without MMU or FPU. Found to be free of Enforcer hits and able to work with virtual memory products; compatible with Retina, EGS/Spectrum, and Picasso software. Also tested under V33 through V40 system software.

### 1.41 Product-Info field: .type

.type:  
 PURPOSE: A keyword that describes the nature of the program  
 FORMAT: Preferrably a single word or two.  
 EXAMPLE: Database  
 EXAMPLE: Spreadsheet  
 EXAMPLE: Animation Player  
 EXAMPLE: Animation Tools  
 EXAMPLE: Communications  
 EXAMPLE: Display Commodity  
 EXAMPLE: Mouse Commodity

NOTES:            Avoid abbreviations. Refer to the list below for suggestions.

#### EXAMPLES OF "TYPE" WORDS

Action Game	Animation	Animation Player
Animation Tool	Archiver	CLI Tool
Communications	Compiler	Compression
Database	Disk Tool	Display Commodity
Drawing	Image Conversion	Image Processing
Library	Mouse Commodity	Music Composition
OS Utility	Painting	Picture
Printing	Sound Analysis	Sound Editing
Sound Playing	Spreadsheet	Strategy Game
Text	Text Editing	Text Viewer
Thinking Game	Word Processing	Workbench Tool

## 1.42 Product-Info field: .version

```
.version:
  PURPOSE:   The program's version number
  FORMAT:    MAJOR.MINOR
             1 line only
  EXAMPLE:   37.100
  NOTES:     Please note that the Commodore guidelines specify
             that the number after the period is NOT a FRACTION
             but rather a WHOLE NUMBER! Thus, the following is
             a valid progression:
             37.1 37.17 37.39 37.100 37.170
             The following are all vastly different versions:
             37.1 37.10 37.100 37.1000
  NOTES:     The format given for this field is really more of a
             SUGGESTION rather than a RULE. There is no reason
             why you can't store "Today's Version" or "v940205"
             instead of 18.173. In an ideal world everyone
             would use Commodore guidelines, but there are
             enough exceptions.
```

## 1.43 Product-Info field: .beschreibung

```
.beschreibung:
  PURPOSE:   Like .description but for german users.
  FORMAT:    Any number of lines, treated as one line.
             Formatting is permitted, but generally discouraged.
  NOTES:     Do not indent your text if you choose to format
             your text into multiple paragraphs. Do not use t
             as a tab. Leave paragraph formatting to KingFisher.
```

## 1.44 Product-Info field: .release

```
.release:
  PURPOSE:      The program's release number
  FORMAT:       MAJOR.MINOR
                1 line only
  EXAMPLE:      1.3
  NOTES:        This should be the "public number".
                .version should be the internal, if exists.
```

## 1.45 Product-Info field: .uploader

```
.uploader:
  <<<OPTIONAL>>>
  PURPOSE:      Specifies who will upload the archive to the aminet.
  FORMAT:       1 line with 1 email-address.
  EXAMPLE:      T.Igracki@Bamp.berlinet.de
  NOTES:        Main purpose is for .readme files.
```
