## General Information

The **Business Calculator** provides the functionality and feel of a desktop calculator . The design objective was to provide a better and more useful Windows calculator. In particular, other calculators have had such problems as: rounding errors, only 12 to 14 significant digits, poor or no access to historical entries, no print capabilities and designs that did not meet the needs of common users.

Using Business Calculator, you can: perform financial calculations or general mathematics, maintain an audit trail, Copy selected entries to the clipboard, print the calculator tape, and control the calculator by mouse or keyboard.

***Basic Features of the Business Calculator include the following:***

1. **Copy** - Copies selected entries to the Windows Clipboard for pasting in to other applications.
2. **Print** - Prints the entry list (Audit trail or historical tape)
3. **Percent** - Percentages calculations such as, sale plus sales tax.
4. **Memory** - Store, sum and recall calculation results.
5. **21 digits** - 18 significant digits and up to 19 decimal places.
6. **Accuracy** - Extended floating point calculations yield no rounding errors,.
7. **Design** - Uses the latest controls and provides ergonomic and aesthetic look and feel.

## Getting Started

**To activate the application**, simply double click on the Business Calculator icon and the following window will appear.

**To Exit** from the Business Calculator invoke the popup menu by clicking the right mouse button or type Alt-F, and select Exit (or double click on the '-' sign in the upper left hand corner).
