Windows Mini-Program Manager
Version 1·1

Designer   **Craig Ward (100554,2072)**
Date   **30/8/95**

Function   **Mini program manager - fully customisable**

Update   **Significant flaw in version 1·0. I compiled it on my Penty,
                  at a resolution of 1024*768 which is not standard! Aaahhh!
                  I've rearranged the form. Should now look fine (and fit!) on a
                  desktop of 640*480. Any problems then moan at me!**

****

My Terms

This product has been released into the public domain, **FREE!** I want no money in return, and you are welcome to make as many copies, and distribute them, as you like. **However,** I would appreciate some feedback, especially bugs or imporovements that you think that I should make.

History

This program was designed since I became fed up with having to have Program Manager maximized or just "up" when I wanted to run an application. I also wanted a floating text box in which I could type exe command lines. Voila!

Files

There are just two files. Both of which **must be in C:\windows directory!!!**

cw_prog.exe
cw_prog.ini

I'd recommend that you place cw_prog.exe in your startup group. Note that it will minimize Program Manager when it is loaded.

The contents of the ini file are self-explanatory. But I'll go over them anyway:

[LABEL]
This is where you specify the text of the label that appears on the bar

[HINTS]
The first eight buttons on the bar are fully customisable. In this section you can specify the text that appears in each button's hint box.

[PATHS]
This specifies the command line for each of the buttons. Note that the buttons are numbered 1 to 11, left from right.

Conclusions

I hope that it helps. **Have fun and don't forget to give me some feedback!**

"Remember, the force is with you..."
