

[Center]B[HRt]
[Center]E[HRt]
[Center]L[HPg]
[Center Pg][Center]L[HRt]
[Center]A[HRt]...

There should be one center page code per label to center top to bottom and one center code (Shift-F6) per letter to center left to right. Notice the [HPg] code right before the second [Center Pg]. You need to repeat these codes eight times for the eight labels. The easiest way to do this is to block from (and including) the first [Center Pg] code to (and including) the [HPg] and copy down the page seven times. We found that these kind of labels seem to work best with a 14 pt. or larger font.

This procedure for defining the labels is simple, yet you must be exact with the inserted information. The dimensions included in this example may not be exact for the particular label form you are using. In this event, you will need to adjust and experiment with the dimensions according to the specific form. (The form used in this example was Avery self-adhesive file folder labels).
