

***** WinCLI Version 1.20 *****

© Copyright 1991 Robert Salesas

WinCLI is a shareware product. If you use it you are required to register within a reasonable (30 day) period. This will entitle you to a personalized "clean" version. You will also be notified of future upgrades and upcoming features.

If you like this program and use, please do register. If there is enough interest I'll gladly expand and improve the list of commands and features available.

To register, send \$15 (US) to:

What is WinCLI?

WinCLI is a command line interpreter for Windows 3. It performs many of the functions that the standard DOS prompt does. Why then do you need WinCLI? Many reasons...

- 1) With WinCLI you are able to run Windows programs by typing their name instead of looking for an icon. So if you like the functionality of the DOS prompt to start programs, you can now use WinCLI for Windows applications.
- 2) WinCLI is a Windows application so it doesn't have to be manually closed when you quit your Windows session. You don't even have to type EXIT (although you can), the close menu works just fine!
- 3) WinCLI works equally well on all modes of Windows. You don't need a 386 to take advantage of this DOS prompt! It also multitasks better as it is a well behaved Windows application.
- 4) WinCLI also supports a scrollable window with an adjustable height that you specify. You can place as many lines as you need to see. For example if you want to show a directory listing and then do a bunch of individual deletes, you just scroll up with the cursor keys to see the listing, even if its off the visible portion of the screen. The width and the displayed prompt are also adjustable.
- 5) Of course you have all the standard features of a CLI as well. You can show directories, rename files, create subdirectories, delete files, and more.

In order to obtain help on WinCLI just type "HELP" (without the quotes) at the WinCLI command line or select one of the menus. You'll also see how to set the default prompt,

font, colors, height, and width.

Please submit any suggestions you have, I'm open to ideas!
