

March 2, 1990

The attached Alt+Z WordPerfect 5.1 macro illustrates discussion found in HOT TOPICS (Exec-PC) on WP programming.

The conversation was initiated between Karen Little and Steve Shattuck.

The topic: How to correctly express OR statements in WP macro language

MACRO **Alt+Z** DOES THE FOLLOWING:

Selects correct answer when  
    Y or y is pushed  
    N or n is pushed  
    any other key is pushed, either CAP or lower case

Displays the question  
    **Press Y or N**

To test, press Y or y, N or n, or any other key

To CANCEL, press F1

NOTE: | = OR  
    != = NOT EQUAL

FURTHER COMMENT:

Anyone who can make this more compact, leave message to Karen Little in HOT TOPICS. I noticed that ( ) defines a group and possibly that could cut the number of words in the macro down. I haven't tried it yet.
