Chapter 1

DMS2HD

1.1 DMS2HD V1.0

```
                              DMS2HD V1.0
                        ==-=-=-=-=-=-=-=-=-=

                      Shareware Release (16.12.97)

                      (c) 1997 Andreas Falkenhahn
```

1.2 The keyfile

The Keyfile is file which must be copied to devs:. With the keyfile are the
disabled options useable and you have automatically the full version
of the InstallKit, logical!

You get the keyfile when you send US$15 or 20DM and the filled in
Registration form to me.

You aren't than allowed to spread the keyfile! In the keyfile is you're
complete adress saved. Spreaded keyfiles are an act of software piracy!

1.3 "

DMS2HD is a more or less powerful program which can decrunch
your .DMS archives *DIRECT* to HD/RAM. Decrunching a DMS
disk is now very fast (5 secs).

DMS2HD is a CLI/WB program. You can easily use it in conjunction
with a directory manager like DirOpus, but you can also double-
click the icon and select all via requesters.

Decrunching a DMS archive is simple.
See how easy it is.

1.4 Copyright

DMS2HD is copyrighted 1997 by Andreas Falkenhahn.

The delivered with program FastRAD is copyrighted by Torbjörn Andersson.
The program FastRAD is Freeware.

DMS2HD without the Keyfile in devs: can be copied. Copying the
keyfile illegal.

This program is Shareware. If you use it and enjoy it please
register yourself and get post hastes the full version.
To register, please fill in the Registration form, print it and send it to me.

The version without keyfile can be identified by the nerving "typin' cool
sentences game" :)

DMS2HD shan't be selled for more than $2. If you have bought it
for more, please change your dealer fast.

DMS2HD must distributed with all files on the disk apart from
devs:DMS2HD.key, of course. Please spread it not as an DMS Archive, only
as a disk or LHA/LZX archive.

I don't accede any liability if da Cool Installer has something damaged. It
was comfortable tested and at me nothing dangerous happened.

1.5 Über den Autor

```

```

If you have any problems with DMS2HD, found bugs or have suggestions
please email or write me.

If you write, don't forget to send some stamps or $$$, because the postal
service in Germany is REALLY expensive.

My system:

A1200, 68030 50mhz, Mitsumi FX-400, 18MB Ram, OS3.1

1.6 Grüße und Danksagungen

1.7   System Vorraussetzungen

```
To use DMS2HD you need at least an Amiga (oh, can't I use
it on PeeZee ?) with harddisk and OS2.0.

IMPORTANT: The main executable DMS must be installed in C:
           DMS2HD tries to allocate C:DMS. This path can
           be changed by user in later versions of course.

Additionally you must have the workbench installed on your harddisk.
```

1.8   Decrunching a DMS archive

```
Decrunching is simple you can use...

1) the simple inbuild GUI: Start DMS2HD. A requesters appears and
        forces you to select a DMS archive. THen
        you must select a destination path. Now
        decrunching will begin (in the unregged
        version you have to enter some sentences
        before...)

2) the CLI: This way is good for using DMS2HD with a directory manager.
        You can then decrunch the files easily with the manager.
        Especially cool with DirOpus :) OK, there're two parameters,
        which must be specified: DMS2HD archive.dms destination
        Archive is the DMS archive to decrunch (don't forget suffix .DMS)
         Destination is the path, where to decrunch the files to
        I give you a simple example: DMS2HD Wonderland.dms dh0:Games/Wonderland

That was it! If you've questions, don't hesitate to ask me.
```

1.9   History

```
V0.1: (for private use only)

- very buggy
- CLI control

V1.0: (Shareware Release Version)

- simple GUI added
- better decrunching
- less bugs (many were fixed)
- keyfile support
- Amiga Guide® Documentation

Future plans:

- more options
```

- your plan -> contact me

1.10 Shareware

This program is Shareware. If you like & use it register yourself by
sending $15 (20DM) with the filled-in Registration form to
this adress. You'll get a keyfile which enables the disabled options.
So you have a lot more features.

Additionally I'm interested in errors or suggestions to DMS2HD.
Take a look here.

1.11 Was bringt mir die Vollversion?

The fullversion (=keyfile) has this features:

1. decrunch archives which are bigger than 350kb !!
2. don't enter the funny sentences

and more because of the future versions which run with the keyfile undisabled,
of course.

Register now.

1.12 Registrationsformular

                              DMS2HD

                        Registrationsformular
