Converting Photo CD files to bitmaps

Step by step

The Asymetrix Photo CD Converter converts Kodak Photo CD images into bitmap (.BMP) format. To use this utility, you must have a CD-ROM drive that can read Kodak Photo CDs, and the Photo CD that contains the images you want to convert.

To convert a Photo CD image to bitmap format:

- 1 Insert your Photo CD into the CD-ROM drive.
- 2 From the CD Drive list, select the CD drive.
- 3 Using the slider below the Photo window, select the image you want to convert.
- 4 Under Size and Color, select the size and color depth you want your bitmap to be.
Only the sizes and color depths provided for the Photo CD image are listed; those you select will be applied to the bitmap you create.
- 5 Under Transform, select any transformation options you want.
The transformation options you select are not reflected in the Photo window, but will be applied to the bitmap file.
- 6 From the File menu, choose Save As, specify a directory and file name for the bitmap, and then click OK.

Converting an image may take a few seconds to a minute or longer, depending on your system and the image size and color depth you select. Choosing larger sizes and greater color depth also increases the amount of disk space required to store the bitmap.

Note To view any available copyright information for the images on the Photo CD, click Rights.
