

PG_HyperLink_Canvas (1.0)

freeware

This class is used to build a hyperlink text with the specified parameters. All you have to do is to drop a normal Canvas into your window and set its super to PG_HyperLink_Canvas. You can also drag the class PG_HyperLink_Canvas directly into your actual window.

The class has one method included.

**set_Hyperlink (font as String,size as integer,line as Boolean,c as color,
ec as color,url as String) :**

font: The name of the font you want to use.

size: The font size in points.

line: A boolean value. Set it to true if you want the text as underlined text.

c: The normal color for the link.

ec: The color if the mouse has entered

url: The URL you want to go, if the mouse is pressed.

Example:

```
Sub Open()  
    me.set_Hyperlink("System",12,true,RGB(0,0,255),  
                    RGB(255,0,0),"http://www.realsoftware.com/")  
End Sub
```

<http://www.realsoftware.com/>

The mousecursor changes automaticly to the pointing hand cursor with the system ID -20877.

NOTE:

If you have some bug reports or ideas for more RB-Classes then let us know. You can contact us via e-mail, the adress is mentioned at the end of this documentation.
