Graph()

This function creates a dialog box containing three bars making up a bar graph. This function can display and update data from HTBasic in real time. This is done through a series of C++ long pointers.

Parameter 1

Basic Type: LONG
C Type: long *

This is the pointer to the data used for updating and displaying the left hand bar graph.

Parameter 2

Basic Type: LONG
C Type: long *

This is the pointer to the data used for updating and displaying the middle bar graph.

Parameter 3

Basic Type: LONG
C Type: long *

This is the pointer to the data used for updating and displaying the right-handed bar graph.

Parameter 4

Basic Type: LONG
C Type: short *

This parameter is the starting X position of the dialog box.

Parameter 5

Basic Type: LONG
C Type: short *

This parameter is the starting Y position of the dialog box.
