

HTBToolbar

DLL LOAD “HTBToolbar”

DLL GET “SHORT HTBToolbar:Toolbar”

Toolbar()

This function creates a Toolbar that has nine buttons that signal HTBasic when they have been pressed. This function takes one optional parameter.

Parameter 1

Basic Type: INTEGER

C Type: SHORT

This optional parameter is not implemented in this DLL, but is included to be used after creating additional toolbars, as a means to select the desired toolbar.

Requirements

A Signal event must be included in HTBasic for each Toolbar button being used, and must use the identifier for the desired button where the buttons starting from the left are number from 1 to 9.

Ex. ON SIGNAL 1 GOSUB Button1

For this example when button one is pressed (the leftmost button) this event would trigger, and the subroutine Button1 would be called. Up to 15 Signals ranging from 1 to 15 may be used in HTBasic at one time.
