HTBtree.dll

DLL LOAD "HTBtree"

DLL GET "VOID HTBtree: Tctrl"

Tctrl ( )

This function will create an MFC driven dialog box with a tree control representing the file tree structure of the OS. This includes Network Neighborhood capabilities. On OK or a double click on a particular branch, this returns a path to HTBasic.

Parameter 1
>
> Basic Type: STRING
> C Type: char *
>
> This parameter is the string variable or quoted text string which will represent what appears in the top left-hand side of the tree control dialog box.

Parameter 2
>
> Basic Type: STRING
> C Type: char *
>
> This parameter is the return string, that is, a variable where the pathname will be written to. After calling Tctrl() print this variable and it will display the selected pathname.   See example program.
