

CNS ActiveGUI ActiveX - Version 1.14

Description:

CNS ActiveGUI ActiveX is a package of current four user interface controls for Visual Basic. Now it is possible to add new style toolbars, toolwindows, buttons and separators to VB projects which can be found in the Office products, IE4.0, etc. Current included controls are: ActiveToolbar, ActiveDock and ActiveButton and Active Separator. With ActiveToolbar and ActiveButton it is easy to incorporate the new toolbars with flat style buttons. ActiveDock is a dockable toolwindow like it is shown in Internet Explorer 4.

Following a list of only important methods, events and properties:

Current supported methods, events, properties for ActiveToolbar:

ShowHandle	Property	Determines whether a handle is shown
------------	----------	--------------------------------------

Current supported methods, events, properties for ActiveButton:

Active	Event	Is fired when the button is "active"
NotActive	Event	Is fired when the button is not "active"
Picture	Property	Determines the picture of the button
UseMaskColor	Property	Determines whether the button uses a maskcolor or not

Current supported methods, events, properties for ActiveDock:

CloseClick	Event	Is raised when the CloseButton is clicked
------------	-------	---

Current supported methods, events, properties for ActiveSeparator:

Direction	Property	0 - Vertical 1 - Horizontal
Size	Property	0 - Small - ideal size for 16x16-pixel toolbars 1 - Large - ideal size for 32x32-pixel toolbars
