

# axButton Help

[Properties](#)

[Methods](#)

[Events](#)

axButton is a activeX IE Style button control which has several different styles including a seperator, and allows transparent bitmaps.

## **File Name**

axButton.ocx

## **Distribution**

- Unzip the source code with directories intact.
- Load the sample Project1 with Visual Basic. This should register the OCX for use with other VB applications. If it does not load correctly, then from the DOS prompt, move to the install directory and type: REGSVR32 axButton.ocx (you may need to put c:\windows\system\ in front of regsvr32 if you don't have a path.
- Whenever you want to add the control to a VB application, go to the Project/Components menu and select "ActiveX IE Style Button".

# Revisions

## 1.0

- Initial release

## 1.1

- Removed icon from about box

## 1.2

- Added properties for colors of 3d effects

## 2.0

- Complete redesign of button, got rid of some properties and code that was not needed, made control smaller
- Added drop down button
- Changed Click event to occur after MouseUp
- Changed NodeClick event to occur after MouseDown
- Fixed highlighting on standard button
- Added ShowFlatGrey property
- Fixed problem in raising Click event
- Added DrawState API for monochrome bitmap

## 2.1

- Added horizontal Seperator and Toolbar Handle

## 2.1.2

- Fixed GPF if Unload form is executed from Click event

## 2.2

- Added up/down button style
- Added ButtonGroup, ButtonGroupDefault properties

## 2.2.4

- added caption capabilities for Up-Down button style

## 2.2.7

- fixed problem with displaying icons
- fixed problem with greyscale routine

## 2.2.14

- added DisabledPicture property

## License

This control was developed and published by Geoff Glaze and was originally name PopupCommand. Software Solution renamed the control for it's own purposes. You may use it freely for development with Microsoft Visual Basic 5.0. This product is freeware and includes source code which you may change to suit your purposes.

# Properties

All of the properties for this control are listed below:

Standard  
BackColor  
Caption  
Enabled  
Font  
Height  
Index  
Left  
Tag  
ToolTipText  
Top  
Visible  
Width

## **Control Specific**

ButtonGroup  
ButtonGroupDefault  
ColorDarkShadow  
ColorHighlight  
ColorLightShadow  
DisabledPicture  
DownPicture  
DropDown  
FlatPicture  
MaskColor  
Picture  
PictureAlign  
ShowFlatGrey  
Style

## Methods

All of the methods for this control are listed below

Standard

Refresh

**Control Specific**

ShowAbout

## Events

All of the events for this control are listed below:

### Standard

Click  
DbClick  
KeyDown  
KeyPress  
KeyUp  
MouseDown  
MouseEnter  
MouseExit  
MouseMove  
MouseUp

### **Control Specific**

DropDownClick

**Standard Property/Method/Event**

Depending on your host environment, this property/method/event may be referred to by a different name or may not apply to this control. Refer to your host environments documentation or help file for further information.

# ColorDarkShadow Property

Returns or sets the mouse-over color of the dark shadow of the button

## Syntax:

*object*.**ColorDarkShadow** [= long]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>long</i>        | A long expression that evaluates to a color value       |

## Remarks

# ColorHighlight Property

Returns or sets the mouse-over color of the highlight of the button

## Syntax:

*object*.**ColorHighlight** [= long]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>long</i>        | A long expression that evaluates to a color value       |

## Remarks

# ColorLightShadow Property

Returns or sets the mouse-over color of the light shadow of the button

## Syntax:

*object*.ColorLightShadow [= long]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>long</i>        | A long expression that evaluates to a color value       |

## Remarks

# DownPicture Property

Gets/returns the bitmap that displays when button is pressed  
If this value is not set, then the Picture property is used

## Syntax:

*object*.DownPicture [= picture]

The property syntax has these parts:

| <u>Part</u>    | <u>Description</u>                                      |
|----------------|---|
| <i>object</i>  | An object expression that evaluates to a control object |
| <i>picture</i> | An expression that evaluates to a picture object        |

## Remarks

# DropDown Property

Returns or sets a value to determine whether or not to display the drop down button

## Syntax:

*object*.**DropDown** [= boolean]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>boolean</i>     | A boolean expression                                    |

## Remarks

# FlatPicture Property

Sets/returns the bitmap displayed when mouse is not over control  
If this value is not set then the Picture property is used

## Syntax:

*object*.FlatPicture [= picture]

The property syntax has these parts:

| <u>Part</u>    | <u>Description</u>                                      |
|----------------|---|
| <i>object</i>  | An object expression that evaluates to a control object |
| <i>picture</i> | An expression that evaluates to a picture object        |

## Remarks

# MaskColor Property

Returns or sets the mask color used to display the picture

## Syntax:

*object*.MaskColor [= long]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>long</i>        | A long expression that evaluates to a color value       |

## Remarks

# Picture Property

Sets/returns the bitmap displayed on the button

## Syntax:

*object*.**Picture** [= picture]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>picture</i>     | An expression that evaluates to a picture object        |

## Remarks

# PictureAlign Property

Returns or sets the alignment of the picture displayed on the button

## Syntax:

*object*.PictureAlign [= integer]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>  |
|--------------------|--|
| <i>object</i>      | An object expression that evaluates to a control object                                  |
| <i>integer</i>     | An integer expression that evaluates to set the alignment of the picture as listed below |

## Settings

[vbPicLeft] = 0

[vbPicRight] = 1

[vbPicTop] = 2

[vbPicBottom] = 4

# ShowFlatGrey Property

Get/Sets a value to determine whether or not to display the picture in greyscale when the mouse is not over the button (Cool Button only)

## Syntax:

*object*.**ShowFlatGrey** [= boolean]

The property syntax has these parts:

| <u>Part</u>    | <u>Description</u>                                      |
|----------------|---|
| <i>object</i>  | An object expression that evaluates to a control object |
| <i>boolean</i> | A boolean expression                                    |

## Remarks

# Style Property

Returns or sets the style of the button

## Syntax:

*object*.**Style** [= Integer]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                                      |
|--------------------|--|
| <i>object</i>      | An object expression that evaluates to a control object        |
| <i>integer</i>     | An integer expression that evaluates to the style listed below |

## Settings

[Cool Button] = 0

[Toolbar Button] = 1

[Seperator] = 2

[SeperatorH] = 3

[Toolbar Handle] = 4

[Toolbar HandleH] = 5

[Standard Button] = 6

# ShowAbout Method

Show the about box

## Syntax:

*object*.**ShowAbout**

The method syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| object             | An object expression that evaluates to a control object |

## Example:

# DropDownClick Event

Occurs when the dropdown button is clicked

## Syntax:

*object*.**DropDownClick**

The event syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |

## Remarks:

# ButtonGroup Property

Returns or sets the name of a button grouping when the button style is up/down button.

## Syntax:

*object*.**ButtonGroup** [= string]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>   |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object             |
| <i>string</i>      | A string expression that evaluates to the name of a button grouping |

## Example:

Create three buttons, each representing the 3 styles of paragraph justification (left, right, and center). If a name is not entered in the ButtonGroup property for each button, then the button will react to a click on its own and just turn on/off. Now, enter "justification" in the ButtonGroup property for all three buttons, and when one is turned on the other two will be turned off. It is possible to have no buttons turned on or to force a button to be on by default. See the ButtonDefault description for further information.

# ButtonGroupDefault Property

Returns or sets a boolean value to determine which button with an up/down button style is the default button

## Syntax:

*object*.**ButtonGroupDefault** [= boolean]  
*object*.**ButtonGroupDefault2** [= boolean]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>boolean</i>     | A boolean expression that evaluates to True or False    |

## Example:

Create three buttons, each representing the 3 styles of paragraph justification (left, right, and center). Enter "justification" in the ButtonGroup property for all three buttons, and when one is turned on the other two will be turned off.

Set all three button's ButtonGroupDefault property to false if you want the ability to have no buttons selected.

Set one of the button's ButtonGroupDefault property to true if you always want to have one button turned on. For instance, set the first button's ButtonGroupDefault to True. This will force that button to be turned on when the application is first started and also if you click twice on one of the other buttons, it will revert to be the one that is turned on.

# DisabledPicture Property

Sets/returns the alternate bitmap displayed when the button is disabled  
If this value is not set then the Picture property is used and it is shown as a disabled button would be.

## Syntax:

*object*.**DisabledPicture** [= picture]

The property syntax has these parts:

| <b><u>Part</u></b> | <b><u>Description</u></b>                               |
|--------------------|---|
| <i>object</i>      | An object expression that evaluates to a control object |
| <i>picture</i>     | An expression that evaluates to a picture object        |

## Remarks
