

MozzySoft CbuttonR is very simple to use, there are only two properties which control its color and state. The following is a Visual Basic 5 Example of its use.

To change its color supply a value from 0 to 16, eg

CbuttonR1,Bcolor = 5

To Change the on/off state a boolean value of True for ON and False for OFF. 0-1

CbuttonR1,Bstate = TRUE

See the example program to see more, please note the example program is crude and is intended to demo purposes only.
