About the Author:

Hello, my name is Tom and I am 22 years old. I am currently pursuing a Computer Science degree at George Mason University, located in Fairfax VA. I have been studying Windows programming for four years and have religiously studied Win32 programming since the release of Windows 95.

All of my Windows knowledge comes from reading books and visiting newsgroups. I've read books on programming Windows 95/NT using C, MFC, OWL, and Visual Basic. I have also read books on ActiveX controls, COM, OLE, DDE, and Automation. Nowadays I find that I always have three or four books waiting in the wings.

At Mason, I have studied compilers, computer architecture, data structures, object oriented design, software engineering, Java, C, C++, etc, etc, etc. Last semester I earned a 3.5 GPA and a spot on the dean's list. I am currently a junior and expect to graduate in May or December of 1998.

I've learned FoxPro 2.5, and a little 2.6, programming while working at my current job. I am now trying to make the move to Visual FoxPro 5.0, with a little difficulty. I think I need to read another book. I also administer a small, < 20 computers, LANtastic network. We have a mix of DOS/Win3.x and Windows 95 computers in our office. I also handle all computer hardware upgrades and repairs. This includes installation of new motherboards, hard drives, SCSI devices, you name it.

I am always looking for any kind of job offers. You can contact me at 1-703-368-4071 (please ask for the younger Tom), or you can e-mail me at the above address.

Legal Stuff:

Although I have tested this control, I DO NOT take any responsibility for any damage caused by this control, any of the included examples, or any other product which makes use of this control. This control is freeware and you are advised to use at your own risk. If I am notified of bugs, or desired features, I will probably release an update, but no guarantees.

What's Included:

\EdgeCtl.ocx	-	ActiveX Control
\Readme.rtf	-	This Readme file
\Examples\Vb	-	A sample program that uses the Edge Control (written in VB5)
\Examples\MFC	-	A sample program that uses the Edge Control (written in MFC 4.2)

Control Properties:

Name	Access Rights	Description
EdgeStyle	Read/Write	Changes the style of the edge control.
EdgeBottom	Read/Write	Displays or hides the bottom edge
EdgeLeft	Read/Write	Displays or hides the left edge
EdgeRight	Read/Write	Displays or hides the right edge
EdgeTop	Read/Write	Displays or hides the top edge
BackColor	Read/Write	Changes the back color of the control

Notes:

The Edge control can act as a simple frame.
