### Packages

<a href="#"><u>Internet Pack</u></a>	32-bit OLE controls for Internet Access
<a href="#"><u>Mega Pack 2</u></a>	Version 2.0 of the Mega Pack (more controls!)
<a href="#"><u>MIDI Pack</u></a>	Five custom controls for MIDI access and control

### Individual Controls

<a href="#"><u>Alarm</u></a>	Alarm Custom Control
<a href="#"><u>BarCod</u></a>	Barcode Display and Printing Custom Control
<a href="#"><u>BmpLst</u></a>	List Box with Bitmaps and Text Custom Control

<u>DFInfo</u>	Disk and File Information Custom Control
<u>FLabel</u>	Formatted Label Custom Control
<u>FMDrop</u>	File Manager Drag-and-Drop Notification Custom Control
<u>HiTime</u>	High Resolution Timer Custom Control
<u>IniCon</u>	INI File Manager Custom Control
<u>JoyStk</u>	Joystick Information Custom Control
<u>LED</u>	LED Custom Control
<u>List/X+</u>	Advanced List Box ActiveX Control
<u>MenuEv</u>	Menu Event Notification Custom Control
<u>MouseWheel</u>	MouseWheel VB5 Control
<u>MSlot</u>	Windows for Workgroups Mailslot Custom Control
<u>MSStat</u>	Status Bar Custom Control
<u>PerCnt</u>	Percentage Bar/Status Custom Control
<u>PicBtn</u>	Picture Button Custom Control
<u>Probe</u>	Control Probe/Diagnostic Custom Control
<u>RegiCon</u>	Registry Information VB5 Control
<u>RoText</u>	Rotated Label Custom Control
<u>SoundX</u>	Soundex and Metaphone Custom Control
<u>SoundX/X</u>	Soundex and Metaphone ActiveX Control
<u>Tips</u>	Tool Tips Custom Control
<u>Tray/X</u>	Tray Icon ActiveX Control
<u>Valid</u>	Validation Custom Control
<u>Ver</u>	Version Information Custom Control
<u>Wave</u>	WAV File Player Custom Control
<u>ZipInf</u>	ZIP File Information Custom Control

### **Internet Controls**

<u>ASocket</u>	Windows Sockets Custom Control
<u>Finger</u>	Finger Custom Control
<u>FTP</u>	File Transfer Protocol (FTP) Custom Control
<u>FTP/X</u>	File Transfer Protocol (FTP) ActiveX Control
<u>GetHst</u>	Get Address / Host Name Custom Control
<u>Gopher</u>	Gopher Custom Control
<u>Mail</u>	Mail (SMTP/POP) Custom Control
<u>News</u>	News (NNTP) Custom Control
<u>RAS</u>	RAS Custom Control
<u>Time</u>	Time (NTP) Custom Control
<u>Whols</u>	Whols Custom Control

### **MIDI Controls**

<u>Indic</u>	Indicator Custom Control
<u>Knob</u>	Knob Custom Control
<u>MIDI I/O</u>	MIDI Input and Output Custom Control
<u>MIDIFile</u>	MIDI File Access Custom Control
<u>Slider</u>	Slider Custom Control

### **Background**

Mabry Software was founded by James Shields in 1992. We specialize in Windows programming tools and components. Mabry Software focuses on custom controls (VBXes, OLE controls and ActiveX controls).

Our software is available in Microsoft's Visual Basic (MSBASIC) forum on CompuServe, in our section on CompuServe (GO MABRY), on BBSes, and on various Internet sites (including <ftp.cica.indiana.edu>).

## Alarm Custom Control

Alarm VBX/OCX is a Visual Basic custom control that lets you set multiple alarms to go off at various times during the day. This control makes it easy to schedule events --- just set the properties and wait for it to notify you.

With Alarm, you can set dozens of alarms, cancel/delete an alarm and create a new one, edit an old one, set many alarms for a given date in the future, and cancel alarms at will.

Alarm even tells you when the date has changed. You can use this to remove all of the current alarms and set new ones for the day. A must if you're writing a Personal Information Manager.

Alarm is invisible to the user.

Registration:	\$20
Source and Registration:	\$50
<u>CompuServe SWREG:</u>	1475 (1476 for source)

Order Form

This control is available separately or as part of the Mega Pack 2.

## BarCod Custom Control

BarCod makes bar code display and printing really easy. Just pick the orientation, set the size, and pick the bar code style. Then, set the caption to whatever you want the bars to be.

BarCod uses the Caption property to determine what to display. ForeColor is used for the color of the Bars. BackColor is used for the color of the background. If BarCod cannot fit the entire bar code in the control window, it will fill the entire control with the background color.

Printing is straight forward, too. Just tell the BarCod control what to print and where, and it paints barcodes into the Printer Object.

Under VB 3.0 and VB 4.0, BarCod will bind to a data control. It uses the DataField, DataSource, and DataChanged properties.

This control is good for inventory applications, identification systems, and any other programs that require printed computer-readable data. Samples included show how to print barcodes using the Printer Object and how to copy a bitmap of the barcode to the clipboard.

Source and Registration:	\$199
<u>CompuServe SWREG:</u>	1314 (1315 for source)

Order Form

This control is available separately or as part of the Mega Pack 2.

## BmpLst Custom Control

BmpLst VBX/OCX is a Visual Basic custom control that displays a list box that has text and bitmaps in it. The bitmaps can be placed on any side of the text (top, bottom, right, left). BmpLst is not hampered by the normal 64k limit that normal list boxes suffer. Users have loaded 10,000 items into BmpLst with great success.

BmpLst supports multi-column lists. In this case, all of the list elements must be the same size. The bitmaps may be of varying size (shorter bitmaps will result in gaps between it and the item below).

BmpLst also supports 3-D effects (much like the THREED.VBX). The control's border supports raised, lowered, and insert 3-D effects (plus the normal solid border). BmpLst can easily be set up to handle a check-box list. All it takes is a few lines of code.

## DFInfo Custom Control

DFInfo VBX/OCX is a Visual Basic custom control that gives convenient access to disk and file information. VB programmers are able to read and modify miscellaneous information about files (date, time, size, attribute flags, date and time of last modification, etc.). Information about the computers drives is available through a second set of properties.

The disk side of this control allows you to find out how much disk space you have, and how much of it is free. You can also read volume names.

The file side of this control allows you to find out all of the important information about a file (size, attribute flags, date and time of last modification). It also allows you to change most of the attribute flags and change the size of the file as well.

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## Internet Finger Custom Control

The Finger control requests user information from another host. Some hosts will return little information, some hosts return large amounts of information, some return none at all. The information typically returned includes last date of logon, mail waiting, real name, etc. Sometimes the information includes an address and/or a phone number.

The Finger control complies with RFC 1288.

<u>CompuServe SWREG:</u>	6392 (9059 for source)

Order Form

This control is available separately or as part of the Internet Pack.

Order Form

## **FLabel Custom Control**

FLabel is a label control that lets you format the text within it. You can have different fonts, different colors, multiple paragraphs, paragraph formatting, etc. All this and it's bound, too.

Registration: \$20  
Source and Registration: \$50  
CompuServe SWREG: 4352 (4353 for source)

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## FMDrop Custom Control

This custom control notifies you when a file has been dragged and dropped from the Windows File Manager (FILEMAN).

Registration:	\$20
Source and Registration:	\$50
CompuServe SWREG:	1378 (1379 for source)

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## Internet FTP/X ActiveX Control

Mabry's FTP/X ActiveX control provides easy, powerful, high-level access to the complete FTP client protocol (we follow the Internet standard, RFC 959). FTP/X has powerful built-in features to support debugging and non-standard servers (using the Quote method). FTP/X even supports two different modes of operation, asynchronous or synchronous, to make including it in your project even easier.

FTP/X is a light ActiveX control, which means that it doesn't require any bulky DLLs to run. Your web-based applications (VBScript, ASP, etc.) will download faster, your installation package will be smaller, and you'll have no problems with different versions of DLLs on your users' systems. And, because it's an ActiveX control, FTP/X will run in Visual Basic, Visual FoxPro, Internet Explorer, Delphi and any other environment that supports ActiveX controls.

FTP/X is firewall friendly complying with the Firewall-Friendly FTP Specification (RFC 1579). Even from behind your corporate firewall, your applications will be able to communicate external FTP servers.

Mabry's FTP/X ActiveX control requires no user input to run. The FTP/X control can run completely in the background under program control. This allows your program to take care of file transfers while the user performs other tasks.

Registration:	\$50
Source and Registration:	\$199
<u>CompuServe SWREG:</u>	15749 (15750 for source)

[Order Form](#)

## Internet FTP Custom Control

This control provides the complete FTP protocol. This allows you to send and receive files from FTP servers, get directory information from a server and manage directories on a server. You can use the Mabry FTP control to automatically transfer files to/from a host when a user enters or needs data.

Registration:	\$40
Source and Registration:	\$149
CompuServe SWREG:	6393 (9060 for source)

This control is available separately or as part of the [Internet Pack](#).

[Order Form](#)

## Internet GetHst Custom Control

The GetHst control translates host names to and from IP addresses.

Registration:	\$20
Source and Registration:	\$50
CompuServe SWREG:	6390 (9057 for source)

This control is available separately or as part of the [Internet Pack](#).

[Order Form](#)

## Internet Gopher Custom Control

Gopher is the predecessor to the World Wide Web. Universities still have a lot of information out on Gopher sites. The Gopher control allows your program to automatically retrieve information, menus, images, etc. from Gopher sites. The Gopher control even gives you access to Veronica, which allows you to search Gopher-space.

Registration: \$35  
Source and Registration: \$90  
CompuServe SWREG: 6394 (9061 for source)

This control is available separately or as part of the [Internet Pack](#).

[Order Form](#)

## HiTime Custom Control

HiTime is a high resolution timer. You use this control just like the default Timer control that comes with Visual Basic. Visual Basic's Timer control can only fire an event every 55 milliseconds (18.2 times per second). HiTime can fire events at a much higher rate.

How high depends on the speed of your machine. 486DX2/66's can handle more than 500 ticks per second. 66MHz Pentiums can handle 1000 ticks per second.

Registration:	\$25
Source and Registration:	\$50
CompuServe SWREG:	3382 (3383 for source)

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## Knob Custom Control

The Knob VBX/OCX custom control displays a round knob that behaves like a slider or scroll bar.

Four different knob styles to choose from make Knob extremely versatile. A collection of flexible tickmark properties greatly enhances Knob's usefulness for developing commercial applications. Easily control knob color with five different color properties. Over thirty knob properties are at your fingertips!

- Normal, raised, lowered, and textured knob styles.
- User-definable number of tickmarks with captions.
- Full control of tick caption fonts.
- Control knob color, tick color, tick caption color, and background color.
- Bevel properties for 3D style look.

Registration: \$20

Source and Registration: \$60

This control is available separately or as part of the [MIDI Pack](#).

[Order Form](#)

## Indicator Custom Control

Horizontal and vertical Indicator VBX/OCX custom controls allow you to create professional VU segmented meters. This custom control was specially designed to allow you to easily create state-of-the-art graphic LED VU meters. Three separate colored segment sections can be defined with up to twenty LED segments per section. A comprehensive set of 3D bevel properties allows for flexible visual control.

- \* Horizontal and vertical indicator (otherwise known as a VU meter).
- \* Display information (such as volume, balance, etc.)
- \* A comprehensive set of 3D bevel properties allows for flexible visual control.
- \* Three separate colored segment sections can be defined with up to twenty LED segments per section.

A Visual Basic sample project, VU Meter, is included to show off some of the properties of VINDIC. It allows you to play with the VU Indicator properties to see how cool you can make a VU meter look.

## LED Custom Control

This is a custom control for Visual Basic that behaves like an LED. 3-D effects and colors are all user-definable. This control is useful whenever you need a passive on/off indicator (modem lights, working lights, etc.).

Registration: \$20  
Source and Registration: \$50  
CompuServe SWREG: 3380 (3381 for source)

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## List/X ActiveX Control

List/X is an ActiveX control that sets a new standard for functionality and programmability in ActiveX controls. List/X provides multiple sortable columns, multi-line headers, captions, and list items, unlimited color options, and more. The Mabry List/X control is a 32-bit lightweight ActiveX.

List/X also provides a unique owner-draw capability using high-level COM objects that you create with Visual Basic. This feature provides unlimited flexibility, freeing you from the design limitations built into other controls. Using owner-draw objects, you can easily define the exact appearance of any column in any row. With List/X you can display bitmaps, change fonts and colors on the fly, and use any of the graphical methods available in Visual Basic or the Windows API.

### Functionality:

- \* Multiple columns
- \* Multi-column sorting -- individual columns can be sorted as desired
- \* Sorted/unsorted property may be modified at runtime
- \* Multi-line list items -- the individual items can be single line or multi-line
- \* Multi-line column headings -- each column can have its own multi-line heading
- \* Multi-line caption -- captions are not limited to single lines.
- \* Unique and innovative COM callbacks provide the programmer with the ability to paint any or all listbox items on a per-column basis
- \* ItemData is a Variant instead of a Long -- you are no longer limited to numbers only as the data type. The list items can be associated with numeric values, objects, arrays, boolean values, or any other value that can be held in a Variant.
- \* Simple selection, multiselect, and extended multiselect
- \* Selection-type is programmable at run-time
- \* Column alignment may be modified at run-time
- \* User resizable columns
- \* Minimum and maximum widths for user-resizable columns
- \* Properties to determine whether the mouse is over the caption, headings, or list parts of the listbox
- \* Powerful object-oriented programming model with Column objects and Columns collection
- \* ColumnIndex property provides the column location of the mouse
- \* List items are assignable at design-time using property pages

### Appearance:

- \* 3D effects for list, caption, and headings include Raised, Pop, Drop, Shadow, or Inset
- \* Programmable 3D effect colors
- \* Caption is alignable to left, right, or center
- \* Selected and normal foreground and background colors may be specified for the listbox, columns, and individual items
- \* Appearance and colors are programmable at runtime
- \* Column alignment right, left, or center -- each column can have its own alignment setting
- \* Column headings alignment right, left or center -- each column heading can have its own alignment

Source and Registration: \$249  
CompuServe SWREG: 16204 (16205 for source)

Order Form

## Internet Mail Custom Control

Mail VBX/OCX is the only control in the VB market which is fully MIME compliant. It is really four controls in one. It provides SMTP and POP3. It also can send and receive MIME compliant messages with unlimited attachments. And, it supports encoding/decoding of Base64, Binhex40, UU, and Quoted-Printable.

Mabry Software's Mail meets the complete specifications for MIME (RFC1521 and 1522), POP3 (RFC1725), and SMTP (RFC0821).

Mail can also be used independently as a general purpose encoder and decoder control, or in combination with other controls which need encoding /decoding capability.

The Mail control comes with a sample program written in VB that is nearly a complete mail client. The sample program shows how to use all of the major features (and most of the minor ones) of Mail.

## **RAS Custom Control**

The RAS control gives your programs easy access to the RAS sub-system. Your program can select an Internet service from your phone book, dial and connect to the server, do any processing necessary (using our other Internet controls), and then disconnect.

Registration:	\$40
Source and Registration:	\$129
<u>CompuServe SWREG:</u>	13886 (13887 for source)

This control is available separately or as part of the [Internet Pack](#).

[Order Form](#)

## MenuEv Custom Control

MenuEv provides menu selection notification. In other words, it tells you when the user has selected a menu item and when the user has exited the menu. This is really useful for status bar style help.

MenuEv is really easy to use. All you need to do is place it on your form. There's nothing to set. Events start coming in automatically. The events give you the text of the menu item selected.

Also, MenuEv will automatically update another control for you. You can easily make status bar style help merely by setting a couple of properties. No code required.

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## **MIDI Pack**

The MIDI Pack is made up of five controls. Two controls give you MIDI device and file access (MIDI I/O and MIDIFile). The other three controls are interface widgets that give feedback (Indicator), and user input (Knob and Slider).

Registration: \$99

Source and Registration: \$399

[Order Form](#)

## MIDIFile Custom Control

The Standard MIDIFILE VBX/OCX custom control provides the Visual Basic programmer with a way to read and write MIDI files. Both 0 (single track) and 1 (multiple-track) formats are supported.

Using the MIDIFILE control, you can modify existing MIDI files or create entirely new ones from scratch. You have complete control over and access to every type of MIDI message. You can easily insert, delete, and modify tracks and messages at any time.

MIDIFILE has complete support for System Exclusive messages.

This control is a storage structure for MIDI data. It has no recording or playback functions built in. It was designed following the Standard MIDI File 1.0 specification. What you do with the MIDI data that is loaded into this control is completely up to your programming.

Several Visual Basic samples are provided to illustrate the use of MIDIFILE, including MIDIFILE Control - Actions, Message Text, Track Names, MessageNumber, and Tempo.

Registration: \$40

Source and Registration: \$150

This control is available separately or as part of the [MIDI Pack](#).

[Order Form](#)

## MIDI I/O Custom Control

The MIDIIN VBX/OCX control is used to receive MIDI messages from external MIDI devices. Messages can be retrieved using Events or polling. All messages are immediately time-stamped with millisecond accuracy as the control receives the event. The time stamp is automatic and takes place in the control, not in Visual Basic. This results in a highly accurate time stamp.

MIDIIN has an internal queuing mechanism so, if messages arrive faster than your application can handle them, they will not be lost.

MIDIIN automatically detects the available MIDI IN ports and allows you to select the port you wish to use. The built in message queue allows Long and Short MIDI messages to be received.

The control has a buffer for receiving system exclusive messages.

Several Visual Basic sample projects using MIDIIN are included. A typical example, MIDIThru, shows how to allow MIDI data to pass through Visual Basic, and how to do transposing of MIDI Note On events in real-time.

The MIDIOUT VBX/OCX custom control gives you complete control over the contents and timing of MIDI messages sent to either internal or external MIDI devices. All timing is in milliseconds.

You can queue as many messages as you like (within the constraints of available memory) before starting output, or you can queue one or more messages prior to starting the output and then add more as the output proceeds. Messages can be placed into the MIDI Output queue in any timing order. They are automatically sorted into the correct order. Messages are scheduled for transmission at a time you specify relative to the time the MIDI Output is started.

MIDIOUT includes complete support for System Exclusive messages. It also automatically detects whether or not the current device supports patch catching and/or volume, and allows for control of a devices master left/right volume. With MIDIOUT, you can adjust tempo playback in realtime. Sample Visual Basic projects are included to show you how to use MIDIOUT.

Registration: \$40  
Source and Registration: \$150

This control is available separately or as part of the [MIDI Pack](#).

[Order Form](#)

## MSlot Custom Control

The Mailslot control provides simple interprocess communication between programs running on the same or different computers running Windows for Workgroups.

This control enables you to create and use Windows for Workgroups mailslots. A mailslot is an application-defined buffer that receives and holds messages. Applications create mailslots so that they can receive text or data from other applications on one or more computers in a network.

No Windows API calls required. Requires Windows for Workgroups. Includes network chat sample program.

CompuServe SWREG:	1848 (1849 for source)

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## MouseWheel VB5 Control

Add IntelliMouse support to your 32-bit applications with the Mabry MouseWheel control. The wheel is supported in Microsoft Office 97 and now it can be supported in your applications.

MouseWheel is a VB5 ActiveX control that allows your programs to take advantage of the powerful scrolling capabilities of the new IntelliMouse by Microsoft. Your users can easily scroll and select data without removing their hand from the mouse.

Uses:

- Select radio buttons and toggle checkboxes.
- Quickly scroll through large amounts of text.
- Set the value of a spin control.
- Provide for both horizontal and vertical scrolling.
- Perfect for any object that utilizes scrolling, such as list boxes, spreadsheets, File and Directory lists, etc.
- Scrolling is handled automatically.

Features:

- Since event notifications occur both before and after the user moves the wheel, your application can intercept the wheel movement to enhance or override scrolling.
- Events indicate which mouse button is pressed so your application actions can be tailored for different combinations of wheel movement and button selection.
- A property allows you to specify whether the mouse coordinates are relative to the object that the mouse is over or relative to the entire screen.
- Another property determines whether events are fired for the control under the mousepointer or the control with focus.

MouseWheel can be used in any 32-bit development environment that supports ActiveX controls.

This control is available separately or as part of the [Mega Pack 2](#).

[Order Form](#)

## **RegiCon VB5 ActiveX Control**

Take advantage of the Windows Registry with Mabry's RegiCon control. With the introduction of Windows 95, the use of the Windows Registry is now recommended over .INI files. RegiCon is a VB5 ActiveX control that allows your application to easily access the Windows Registry.

Creating or deleting registry keys and items is as easy as setting two or three properties and invoking a single method. You can also set, retrieve or change an item's value. When retrieving a value the control returns both the value and its data type. There is even a property that will tell you if a key or item exists.

The control can be used for any number of situations where you need to store or retrieve information for your applications. Use the control to store version information or configuration settings. Read the system configurations of the computer to customize or optimize your application for the computer. Control evaluation periods of shareware products. Maintain access control or encrypted security lists.

The control can be used in any 32 bit development environment and works with the Win95 or WinNT 4.0 registry. It supports the most common registry data types, including strings, multi-line strings, Dword (long integers), free form binary, expanded strings, and others.

## Slider Custom Control

The Slider VBX/OCX custom control is similar in function to a scroll bar, but has a different appearance. It is actually two controls in one - a horizontal slider and a vertical slider. You can easily create a cool looking audio mixer with these custom controls. A complete set of bevel properties allows you to quickly get that 3D look. Four different thumb styles add to the flexibility of this control.

- Complete set of bevel properties.
- Slider is similar in function to a scroll bar, but looks better.
- Pro audio mixer fader style thumbs.
- Up, down, left and right thumb properties.
- Left, right, and both tick properties with tick-color, tickcount, tickwidth, ticklength, and gap control.
- Horizontal and vertical slider custom controls.
- Control of the 3D style of the track.

A Visual Basic sample project is included so you can quickly see the wide range of great looking sliders you can create with the Slider control.

## SoundX Custom Control

This control provides Soundex and Metaphone algorithms. Soundex and Metaphone convert words or names to codes that represent how they "sound". This can be really useful in a database application where users need to find names they may not know how to spell exactly.

Use this control to make it easier for them. Just put in the word or name you want converted, and the appropriate codes come out.

### About the Soundex Algorithm

Soundex is an algorithm developed and patented by Margaret Odell and Robert Russell in the early part of this century [U.S. Patent 1,261,167 (1918) and 1,435,663 (1922)]. Don't worry about the patents, they've long since expired.

Many articles have been written about it, but the best description I've seen so far is by Donald Knuth in *The Art of Computer Programming, Vol. 3*.

Soundex converts a word or name to a code comprised of a letter followed by three digits. Some redundancy is taken out of the word (such as stripping vowels, consonant doubles, etc.). The first letter is preserved and the code is generated from what remains.

### About the Extended Soundex Algorithm

This is a minor change to the basic Soundex algorithm. In this algorithm, the first letter is treated like all the rest of the letters (i.e., if it's a vowel, it's stripped, if it's part of a consonant double, the second is stripped (as in LLAMA), etc.).

This code is purely numeric. This can result in faster database scans to pick out like-sounding words or names.

### About the Metaphone Algorithm

Quite frankly, I don't know where Metaphone came from. I got some source code from a friend a few years ago in my e-mail with the comment attached to it: "Try this, it's cool!"

Well, I thought so, that's why it has been included in SoundX. Metaphone does a better job than Soundex and Extended Soundex when it comes to representing like-sounding names. Its drawback is that Metaphone is comprised purely of letters. In other words, it takes up more storage and, in a large database, this can be costly.

This implementation only returns the first four (4) characters of the Metaphone string generated. The code will generate more than that, but after some experimentation, this seemed like an ideal compromise between accuracy and storage space.

## SoundX/X ActiveX Control

This control provides Soundex and Metaphone algorithms. Soundex and Metaphone convert words or names to codes that represent how they "sound". This can be really useful in a database application where users need to find names they may not know how to spell exactly.

Use this control to make it easier for them. Just put in the word or name you want converted, and the appropriate codes come out.

This is a light ActiveX control. This means that it will work just about anywhere you need it: Visual Basic, Visual FoxPro, Internet Explorer, Delphi, Word, web pages, ASP pages, etc. And, because it's a light control, you don't need to ship any huge DLLs with your packages to support it.

### **About the Soundex Algorithm**

Soundex is an algorithm developed and patented by Margaret Odell and Robert Russell in the early part of this century [U.S. Patent 1,261,167 (1918) and 1,435,663 (1922)]. Don't worry about the patents, they've long since expired.

Many articles have been written about it, but one of the best descriptions is by Donald Knuth in *The Art of Computer Programming, Vol. 3*.

## Internet Time Custom Control

The Time control allows you to retrieve the current Greenwich Mean Time (GMT) from time servers on the Internet. The time servers usually have the correct time, since they all talk among themselves to keep things accurate. Our favorite server is the one at MIT (mit.edu). Another good server is at "tock.usno.navy.mil".

You can use the Time control in any application where you need to have accurate time/date stamps. This includes financial transactions, medical data, long-term data collection, or anywhere else that a reliable time-stamp is needed. You can even use this control to update the time-of-day on your systems and servers.

The Time control requests the time from time servers that use the Network Time Protocol (RFC 1305) to synchronize themselves.

## Tray/X ActiveX Control

Tray/X is a 32-bit light ActiveX control that allows your application to display an icon (with tool tips) in the system tray. It is often desirable to display an application in the system tray rather than on the taskbar if the application generally runs unattended or with little user input.

In addition to conserving taskbar real estate, running your application in the tray minimizes the likelihood that users will interfere with the application's functionality yet still provides them with access to its interface. With Tray/X, you can customize the ToolTip when the mouse is over the icon, control whether the icon is visible or hidden, and easily change the icon to indicate application activity.

<u>CompuServe SWREG:</u>	16050 (16051 for source)

[Order Form](#)

## **Validate Custom Control**

The Validate control lets you easily validate data entered by the user. It fires an event when the input control (edit box, combo box, check button, any control) is about to lose focus. In the event, you can place all of the data validation logic. In fact, if you choose, you can have the Validate control cancel the change of focus.

This control is great for data entry forms and any other place where you need to conveniently check user input.

## Ver Custom Control

Ver lets you use the functionality of VER.DLL through properties. It makes getting version information from a file (EXE, DLL, VBX, etc.) very easy.

Ver also gives you file installation functionality. Included with the control is a sample installation/setup utility. This makes it easier for you to write your own installation utilities without the bulk of the Setup Wizard.

## Internet ASocket Custom Control

ASocket VBX/OCX is a Visual Basic custom control that provides you with full access to the power of Windows, making it easy to write TCP/IP client and server software. ASocket provides complete support for Windows and Visual Basic's event-driven programming model and lets you do almost anything that can be done with WinSock.

SocketType sockStream provides sequenced, reliable, full-duplex, connection-based byte streams. Uses the Transmission Control Protocol (TCP) for the Internet address family. SocketType sockDatagram supports datagrams, which are connectionless, unreliable packets (typically small) of a fixed maximum length. Uses the User Datagram Protocol (UDP) for the Internet address family.

## **Ordering Details**

### **International Notes**

Canada and Mexico are not considered international. International orders should add \$5 per control or control package.

### **E-Mail Delivery**

We'll can e-mail your control(s) to you if you provide us with an Internet (Uuencoded or MIME encoded), CompuServe, or AOL address.

### **On-Line Ordering via CompuServe**

Controls may be registered via CompuServe's Software Registration forum. If you're a CompuServe member you can register this software there. Just GO SWREG, and enter the registration ID after the menu.

### **Credit Cards**

We accept American Express, VISA and Mastercard. When ordering using any of these, please send us your card number, expiration date, complete mailing address and phone number.

### **Overnight Delivery and Other Special Instructions**

If you have any special shipping instructions, please let us know. Our goal is to ensure your absolute satisfaction.

## Support Information

### Our Support Philosophy

We want to be as helpful as possible. We always want you to come away happy. We realize that we can't make everyone happy (for some reason, our families like to see us and we sometimes need sleep) ... but we still try.

### Help With Our Controls

If you're having trouble with one of our controls, here are a few general suggestions. First, take a look at the sample programs. Usually, there is a sample program which shows how to use every feature of our controls. These can be quite helpful.

Second, if you haven't already, take a look at the help file and/or manual. They spell out what each of the properties, events, and methods does.

If you are still having trouble with one of our controls, please feel free to [contact us](#) to get help. When you do, make sure that you have as much information about your problem ready as possible. The more you tell us, the better we can help you.

### Help With General Programming

Many people come to us with questions about general programming issues. We would love to help everyone learn to become great programmers, but we simply don't have the time. All is not lost. There are a few places to go to get general help and a few good books that we recommend.

Probably the best on-line place to go is the Microsoft Basic forum (GO MSBASIC) on CompuServe. This place is designed for user-to-user help. Most questions asked here get answered pretty quickly. Another really good place is the VBPJ forum on CompuServe (GO VBPJFO). There are a lot of experts here.

Books, books, books. There are dozens of books out now. The best way to buy a book is to take a look at it at the bookstore. If you like it and it suits your needs, buy it. If it's shrink-wrapped, don't buy it (usually it means they don't want you to know how much the book stinks).

Here are four books we recommend:

#### **Visual Basic 4 How-To**

by Zane Thomas, James Shields, et al  
\$39.95, ISBN 1-57169-001-8

Waite Group Press  
200 Tamal Plaza  
Corte Madera, CA 94925

#### **Teach Yourself Visual Basic in 21 Days**

by Nathan Gurewich and Ori Gurewich  
\$35.00, ISBN 0-672-30715-4

Sams Publishing  
201 W 103rd Street  
Indianapolis, IN 46290

#### **PC Magazine Visual Basic Programmer's Guide to the Win32 API**

by Daniel Appleman  
\$49.95, ISBN 1-56276-287-7

Ziff-Davis Press (A Division of Que New Technologies)

#### **PC Magazine Visual Basic Programmer's Guide to the Windows API**

By Daniel Appleman  
\$34.95, ISBN 1-56276-073-4

Published by Ziff-Davis Press (A Division of Que New Technologies)

Lastly, some of the best sources of material come from Microsoft. The Microsoft Developer's Network is a great deal. Every serious developer we know belongs. The CD-ROM and its search engine are truly fabulous (from a time savings stand-point alone).

## **Update Information**

### **Updates**

Minor updates for all of our controls are free. When you register, we'll send you a sheet that lists all of the controls you've registered and how to update them. Be sure to keep this sheet!

You should check our Web site ([www.mabry.com](http://www.mabry.com)), FTP site ([ftp.mabry.com](ftp://ftp.mabry.com)) or CompuServe section (GO MABRY) periodically for updates.

Even if you don't care about getting the latest versions of the controls, you should visit our Web site or CompuServe section from time-to-time anyway. All of the newest controls will be there. Just GO MABRY.

## Licensing Information

### Legalese Version

Mabry Software grants a license to use the enclosed software to the original purchaser. Copies may be made for back-up purposes only. Copies made for any other purpose are expressly prohibited, and adherence to this requirement is the sole responsibility of the purchaser.

Customer written executable applications containing embedded Mabry products may be freely distributed, without royalty payments to Mabry Software, provided that such distributed Mabry product is bound into these applications in such a way so as to prohibit separate use in design mode, and that such Mabry product is distributed only in conjunction with the customers own software product. The Mabry Software product may not be distributed by itself in any form.

Neither source code for Mabry Software products nor modified source code for Mabry Software products may be distributed under any circumstances, nor may you distribute .OBJ, .LIB, etc. files that contain our routines. This control may be used as a constituent control only if the compound control thus created is distributed with and as an integral part of an application. Permission to use this control as a constituent control does not grant a right to distribute the license (LIC) file or any other file other than the control executable itself. This license may be transferred to a third party only if all existing copies of the software and its documentation are also transferred.

This product is licensed for use by only one developer at a time. Mabry Software expressly prohibits installing this product on more than one computer if there is any chance that both copies will be used simultaneously. This restriction also extends to installation on a network server, if more than one workstation will be accessing the product. All developers working on a project which includes a Mabry Software product, even though not working directly with the Mabry product, are required to purchase a license for that Mabry product.

This software is provided as is. Mabry Software makes no warranty, expressed or implied, with regard to the software. All implied warranties, including the warranties of merchantability and fitness for a particular use, are hereby excluded.

MABRY SOFTWARE'S LIABILITY IS LIMITED TO THE PURCHASE PRICE. Under no circumstances shall Mabry Software or the authors of this product be liable for any incidental or consequential damages, nor for any damages in excess of the original purchase price.

To be eligible for free technical support by telephone, the Internet, CompuServe, etc. and to ensure that you are notified of any future updates, please complete the enclosed registration card and return it to Mabry Software.

### English Version

We require that you purchase one copy of a control per developer on a project. If this is met, you may distribute the control with your application royalty free. You may never distribute the LIC file. You may not change the product in any way that removes or changes the requirement of a license file.

We encourage the use of our controls as constituent controls when the compound controls you create are an integral part of your application. But we don't allow distribution of our controls as constituents of other controls when the compound control is not part of an application. The reason we need to have this restriction is that without it someone might decide to use our control as a constituent, add some trivial (or even non-trivial) enhancements and then sell the compound control. Obviously there would be little difference between that and just plain reselling our control.

If you have purchased the source code, you may not re-distribute the source code either (nor may you copy it into your own project). Mabry Software retains the copyright to the source code.

Your license is transferable. The original purchaser of the product must make the transfer request. Contact us for further information.

The sample versions of our products are intended for evaluation purposes only. You may not use the sample version to develop completed applications.
