

Welcome to ImpulseStudio 2.0!

Welcome to ImpulseStudio 2.0, the suite of ActiveX tools that save you time and help make your applications great!

ImpulseStudio 2.0 Product Description:

ImpulseStudio is a suite of ActiveX Controls and Function & Object Library (DLL) for Visual Basic 5.0, 6.0 & VBA, and delivers powerful, high quality, highly customizable user interface controls, customizable down to every behavior and every color drawn. All controls optionally utilize the "Active" style of Office 97 and 2000, plus many more enhancements. Enhanced standard controls, new dialog controls, as well as system level controls, including *safe* subclassing, system tray control, and a hi-res timer. Includes ImpulseGlobals, the Function & Object Library that simplifies many tasks that take up your valuable time, PLUS offers much more functionality with objects and functions such as a code-only timer, unsigned integer support, fast drawing, advanced number system conversion, system functions, a host of *extremely* powerful string manipulation and search functions, and the *most* powerful registry and INI tool *anywhere*. Demo version is fully functional for developing in Visual Basic, although there is a nag-screen until you purchase it.

Requirements:

Windows 95, 98, or NT

Pentium class processor, 16MB memory recommended minimum.

10MB Hard disk space after installation.

Agreement, Copyright, Trademark, and Usability:

This program, and all its contents, in part or in whole, are Copyrighted © 1999, by Ingenuware, Ltd. Ingenuware™ is a trademark of Ingenuware Ltd. Disassembling, decompiling, or otherwise altering the files in this archive is against the law. You may not, under any circumstance distribute or otherwise disseminate registration or unlocking keys. Violators will be prosecuted to the fullest extent allowable by law. Ingenuware, Ltd., its members, employees, and associates shall not be held liable for any damage caused by use or misuse of the software in this distribution. Users accept full responsibility for use or misuse of the software contained in this distribution, in all cases without exception. This distribution of ImpulseStudio is "nagware", and is free to try for a period of 30 days. After the trial period is over, you must purchase ImpulseStudio, or discontinue use. Unregistered users may not, under any circumstances, redistribute runtime files from this installation with their own products. Users who install this product agree and accept this agreement as binding.

Installation:

Run the `impstu20.exe` file from where you extracted it. This will run a standard InstallShield installation. Please read all the information provided during the install. If you are installing for trial use, enter "trial" for the serial number when prompted. Otherwise, please use your registration key provided to you by Ingenuware.

Note: If you are installing on a computer which has the original OEM version of Windows 95, and do not have Visual Basic 5.0 or later installed, you should install the Visual Basic runtime from www.download.com (search for "vb runtime"). All other versions of Windows do not require this. (The problem is a flaw in one of the DLLs in the very first release of Windows 95, which may make this installation crash. Installing the VB Runtime first updates this DLL, allowing this installation to go smoothly.)

Technical Support Info:

24-Hour/Day FREE Web Support (All Users): You may view articles in our product knowledge

base at any time at <http://www.ingenuware.com/support>.

Unregistered Support: You may obtain one FREE technical support incident via email to support@ingenuware.com.

Registered Support: You will obtain three FREE technical support incidents via email & phone (or 30 days, whichever is to your advantage), after which it is \$30 US per support incident.

Version History:

1999 June	ImpulseStudio 2.0 and ImpulseGlobals 2.0 Released!
1999 April	ImpulseStudio 2.0 Beta 2 – Product acquired by Ingenuware, Ltd. Added new objects & functions for system folders, code timer, icon extraction, fast drawing. Separated out ImpulseGlobals DLL as standalone product. (Still in ImpulseStudio, but also standalone)
1998 June	ImpulseGlobals 2.0 Beta – Added dozens of classes & objects, plus dozens of new powerful string functions, numeric functions, and system functions.
1998 August	ImpulseStudio 2.0 Beta – Added all new controls, incorporated ImpulseGlobals into the “studio” product.
1997 January	ImpulseGlobals 1.3 – Converted all functions to DLL form from source modules. Impulse Controls 1.0 – Created Impulse Button control, AniLabel control, Splash Screen control, and About Box control.
1996 October	ImpulseGlobals 1.2 – Added RegistryAndINI object for transparent access to both types of configuration data.
1996 April	ImpulseGlobals 1.1 – Added many more string functions.
1995 December	ImpulseGlobals 1.0 – String Functions, Window Functions, and System Functions for Visual Basic 4.0, Authored by Robert C. Ryniak
