

Arrange Icons Version 1.00

This is a simple example of how to use SendKeys within Visual Basic to perform one of the most common functions of the Task Manager.

I have included the original code, but there are no comments as I felt it was so simple it did not warrant it !!

Place Arrangel.Exe in your Startup group . It will stay as an Icon until clicked, and then shell to TaskMan.Exe, perform an Alt-A and minimise again. Simple, but effective.
