FlaimChatOCX - Version 3.002 by Raebis
Subs and Functions

The ChatLastLine Sub is not complex. Everytime a new line of text is entered into the room, this sub is called. So to make a chatcommands, do the following;

```
Private Sub Form_Load()
    Flaim1.Enabled = True                       'This turns the OCX on
End Sub

Private Function Flaim1_ChatLastLine (Who As String, What As String)
    If Who = Flaim1.UserSN Then                 'If the Person who said something is you    then
        If What Like "clear" then Flaim1.ChatClear   'If you said "clear" then clear the chatroom
    End If
    If Instr("sup",LCase(What)) Then _          'If someone said "Sup" then
        Flaim1.ChatSend("Sup " + Who")          'Say "Sup" and their SN
    End IF
End Sub
```
