

GAMES

Buckets

Simple addition, subtraction, multiplication or division equations are moving downwards into four different buckets. The user has to type the answer to the equation before it reaches the bottom of the bucket. If the user types a wrong answer, the equation gets collected into the bucket, else it disappears. The user can select the type of equations and the speed, before the game begins. Try to score as many points as possible before all the buckets are filled up.

Puzzle

There are 15 blocks containing numbers, 1 to 15, in random order. The user has to arrange these blocks in the sequence:

1 2 3 4
5 6 7 8
9 10 11 12
13 14 15

by moving the blocks. The aim is to do this in least number of moves.

Tic Tac Toe

The user plays against the computer. The user's symbol is **X** and the computer's symbol is **O**. The user should try to get his symbol into all the three cells in a row, column or diagonal and at the same time prevent the computer from doing the same. The toss decides who gets to make the first move.

About Myself

Hi !!! My name is Achinth G Anand. I am 22 years old and at present studying in final semester, Bachelor of Engineering in Mechanical at B M S College of Engineering, Bangalore.

This software is FREEWARE. Feel free to use it as long as you wish and also feel free to distribute it among your friends and relatives. I would love to know your opinion about this software. I would also like you to send me suggestions for the improvement of this software and ideas for design of new software games.

I can be contacted at:

Postal address: Achinth G Anand

#511, I A Cross,
II Phase, J P Nagar,
Bangalore - 560078.
