This help file is for the context-help of ScrPlus.It's not meant for you to read directly.Help on ScrPlus is all in HTML format.
F

Specifies which corner of your screen will activate the screen-saver option you select.

Click a corner, and then click the option you want. After setting options, you can move the mouse pointer to an active corner, and the screen saver will either appear immediately or won't appear at all, depending on the option you selected.

Determines how much you need to move the mouse to clear the screen saver.

To keep the screen saver on in case you accidentally bump the desk your computer is on, click Low or Normal. Click Keyboard Only to clear the screen saver by pressing a key on the keyboard.

Specifies how long the screen saver should run before a password is required to clear it. Type a number or click the arrows to set the amount of time, and then select a unit of time from the list.

If you clear the screen saver before the specified amount of time has passed, you do not need to enter the password. After the specified amount of time passes, you must type your password to clear the screen.

Shows how the screen saver will appear on your desktop using settings you've specified. The speed at which the screen saver will move when activated will vary slightly from the speed at which it moves here.

Prevents sounds associated with the screen saver from being played when the screen saver is active. If you want to hear sounds, make sure this box is unchecked.

Makes it so you can click the right button or press control, while the screensaver is running, to have it bring up this configuration dialog.
