Mosaic Help is context sensitive, click on the area where you need help:

NCSA Mosaic is an Internet navigation and data retrieval tool.   It will allow you to access network information with the click of a mouse button.   Mosaic is capable of accessing data from World Wide Web servers (HTTP), Gopher servers, FTP servers and Usenet News servers (NNTP).   Mosaic can also access other data services through gateway servers.   These services provide search capabilities in database environments such as PH, Archie, WAIS, and Veronica. NCSA Mosaic provides transparent access to these information sources and services.   NCSA Mosaic software is copyright The Board of Trustees of the University of Illinois (UI), and ownership remains with the UI. The UI grants you a license without a fee to use the Mosaic software for personal, academic, research, government and internal business purposes.

Mosaic operates under Microsoft Windows on one of the following processor architectures.

Windows 3.1x, Windows for Workgroups 3.1x, Windows 95, Windows NT 3.5x

Intel iX86   - Intel's 386, 486, and Pentium processors

Windows NT 3.5x

DEC aXP   - Digital Equipment Corporation (DEC) aXP 64-bit processor
MIPS PC   - Mips Technology processor
Power PC   - Motorola, IBM, Apple Power PC processor

File Menu Commands

Mosaic Help is context sensitive, click on the area where you need help:

File	
Open Document...	**Ctrl+O**
Open Local File...	Ctrl+L
Save As...	Ctrl+S
Save as Text	
Print...	Ctrl+P
Print Preview	
Print Setup...	
Newsgroups...	
Send Email...	
Document Source...	
Exit	

Open Document...

Opens a dialog box where you enter the address of a document.   Presently these addresses are in the form of a URL:

(protocol://machine.name/directory/path/filename.html)

Select the green check to load the document or the red X to abort the request.

Open Local File...

Opens a standard Windows Open dialog box that lets you open a file on your local system. Select the desired HTML or ASCII file and select OK to load the document.

Save As...

Opens a standard Windows Save As dialog box that lets you save the current document in its original format (i.e., HTML or ASCII).

Save As Text

Opens the Save As Text dialog box that lets you save the current document in ASCII format, omitting the inline images and table information that may be included in the document.

Print

Opens a Print dialog box, that displays the status of your current printer and the print range.   Select OK to print the current document.

Print Preview

Mosaic displays the current document in a preview format.   Within print preview there are several functions that allow you to view the present document as it will appear on the printer.   Select Print... to print the document, or Close to close print preview.

Print Setup

Opens a dialog box that allows you to configure the define or configure the settings of the printer.

Newsgroups

Displays the list of subscribed newsgroups in the Mosaic document view Window.

Send Email

Opens the Mail... dialog box. Enter the address of the receiver, the subject, and content of the mail message. You can include the URL of the current document, the text of the current document, include a file using the Import File feature and append a signature file to the end of the mail message with a click of the button. Select Send and Mosaic send the mail message to the mail server you defined in your Preferences, Services menu. Select Abort to cancel the email message.

Document Source

Opens the Document Source window, which displays the source file of the current document. Most are in HTML format, but some files are ASCII. The document source window has two menus (File and Edit). The File menu, has a Save function that allows you to save the source file.   The Edit menu, has a Copy function that allows you to copy information from the file to the Windows Clipboard.

Exit

Closes the window and exits NCSA Mosaic.

Edit Menu Commands

Mosaic Help is context sensitive, click on the area where you need help:

Edit	
Copy	Ctrl+C
Paste	Ctrl+V
Find...	
Select All	

Copy

Copies the selected text to the clipboard.   Text can be selected from the document view window, document location bar, the document source window, and text-entry fields in various interactive windows (e.g., the Open Document... window).

Paste

Pastes the selected text to the current cursor position.   Text can be pasted into the document location bar , text-entry fields in various interactive windows (e.g., Open Document...) , and into forms within the document view window.

Find...

        Opens the Find dialog box. Enter the characters, words, or phrases you want to search for in the current document.   Click Find Next to begin search.   If you want your search to be case sensitive, make certain the Match Case box is checked.

Select All

Selects all the text in the Document View Window.   Select copy from the Edit menu or from the tool bar to copy all text to the clipboard.

Options Menu Commands

The first four entries on the Options menu are toggles--if a check mark appears before the item, it is on or active. If no check mark appears, the function is turned off or inactive.

Mosaic Help is context sensitive, click on the area where you need help:

Options	
√ Show Toolbar	Alt+T
√ Show Status Bar	Alt+S
√ Show Location Bar	Alt+U
Presentation Mode	Alt+P
Preferences...	

Show Toolbar

When checked, the Toolbar is active and appears below the menu bar.   The toolbar offers easy access to several funtions: Save to Disk, Save to Disk, Print, Print Preview, Back, Forward, Reload, Load Home Page, Find, Save to Hotlist, Read Newsgroups, Send Internet Mail, and About.

Show Status Bar

When Show Status Bar is active, the status bar is displayed at the bottom of the Mosaic window.   The status bar contains three areas, Text status, Graphic status, and a Download indicator.   Select the status bar on the main page for more information.

Show Location Bar

> When checked, the Location Bar is displayed under the Toolbar if it is active or under the Menu bar if the Toolbar is not active.   The location bar has a few functions: The X allows you to cancel an entry in the location field and it returns the field to the origional document address.   Selecting the Check submits the current address and prompts Mosaic to load the document.   The location field displays the address of the current document.   The location field also allows you to enter an address to a document in the form of a URL.   The arrow button opens a list box that contains a list of the document addresses visited during the current Mosaic session.

Presentation Mode

Expands the document view field to a full screen view.   By default the title bar, menu bar, tool bar, location bar, and status bar are turned off.   You can toggle the tool bar, Location bar and status bar on and off using Alt + T, Alt +L, and Alt +S respectively.   Alt-P toggles the presentation mode on and off..

Navigate Menu Commands

Mosaic Help is context sensitive, click on the area where you need help:

Navigate	
Back	B
Forward	F
Reload	R
Home	H
History	
Add Current To Hotlist	
Hotlist Manager...	

Back

Moves back one document in the history list. Dimmed when there is no previous document.

Forward

Moves forward one document in the history list. Dimmed when the current document is the last one in the history list.

Reload

        Reloads the current document.

Home

Loads the document defined in the Options, Preferences, General, Home Page field.   See the documentation for more information about setting a home page.

History

Opens a window that contains a tree history of the document addresses (URLs). The current document is highlighted and you can move to any other document in the list by doubleclicking on the address.

Add Current to Hotlist

Adds the title and URL of the current document to the hotlist that is defined in the Hotlist Managers Add to: field.
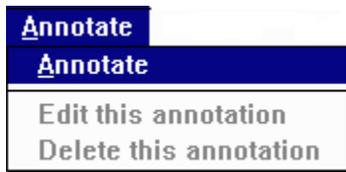

Hotlist Manager   Loads the document defined in the Options, Preferences, General, Home Page

field.   See the documentation for more information about setting a home page.

Opens the Hotlist Manager window where you manage the elements within your hotlist.

Annotate Menu Commands

Mosaic Help is context sensitive, click on the area where you need help:

See online documentation on Mosaic homepage for a more information on annotations.

Annotate

Opens an annotations window that allows you to add, edit, view or delete annotations to the document in Mosaics document view window.

Edit This Annotation

Opens the NCSA Mosaic Annotate window to allow you to edit (or delete) the annotation currently being viewed. This menu entry is only active when you are viewing an annotation.

Delete This Annotation

Deletes the annotation that is currently being viewed. This menu entry is only active when you are viewing an annotation.

Hotlists

Hotlists are user defined shortcuts to World Wide Web documents.   By default we provide a list of documents that we thought would be interesting to the Mosaic user group.   See the documentation for Hotlist Manager for more information about configuring the list of document titles and addresses.

Help Menu Commands

Mosaic Help is context sensitive, click on the area where you need help:

Contents

Opens the first page of the Mosaic context sensitive help page.

Search on Help

Opens a search window relative to Mosaic Help

How To Use Help

  Opens the standard Windows Help tutorial.

About Windows Mosaic

Opens a Document View window displaying the current version information, copyright statement, and a list of the current developers.

Mail Technical Support

Opens a Document View window so you can email to the NCSA Mosaic for Windows technical support staff. You can automatically include your system

Open Document...

Opens a dialog box where you enter the address of a document.   Presently these addresses are in the form of a URL:

(protocol://machine.name/directory/path/filename.html)

 Select the green check to load the document or the red X to abort the request.

■ Save As

Opens a standard Windows Save As dialog box that lets you save the current document in its original format (i.e., HTML or ASCII).

 Print

  Opens a Print dialog box, that displays the status of your current printer and the print range. Select OK to print the current document.

Print Preview

Mosaic displays the current document in a preview format.   Within print preview there are several functions that allow you to view the present document as it will appear on the printer.   Select Print... to print the document, or Close to close print preview.

Copy

Copies the selected text to the clipboard.   Text can be selected from the document view window, document location bar, the document source window, and text-entry fields in various interactive windows (e.g., the Open Document... window).

Paste

Pastes the selected text to the current cursor position. Text can be pasted into the document location bar , text-entry fields in various interactive windows (e.g., Open Document...) , and into forms within the document view window.

 Back

   Moves back one document in the history list. Dimmed when there is no previous
   document.

Forward

Moves forward one document in the history list. Dimmed when the current document is the last one in the history list.

⊙ Reload

Reloads the current document.

 Home

Loads the document defined in the Options, Preferences, General, Home Page field.   See the documentation for more information about setting a home page.

Find...

Opens the Find dialog box. Enter the characters, words, or phrases you want to search for in the current document.   Click Find Next to begin search.   If you want your search to be case sensitive, make certain the Match Case box is checked.

 Add Current to Hotlist

       Adds the title and URL of the current document to the hotlist that is defined
       in the Hotlist Managers Add to: field.

 Newsgroups
Displays the list of subscribed newsgroups in the Mosaic document view
Window

 Send Email

Opens the Mail... dialog box. Enter the address of the receiver, the subject, and content of the mail message. You can include the URL of the current document, the text of the current document, include a file using the Import File feature and append a signature file to the end of the mail message with a click of the button. Select Send and Mosaic send the mail message to the mail server you defined in your Preferences, Services menu. Select Abort to cancel the email message.

About Windows Mosaic

Opens the Mosaic Help Contents Page.   (This page...   ;^)

Retrieving/Interrupt

The animated Mosaic logo acts as a visual indicator letting you know when Mosaic is busy downloading a file and as an download interupt.   Click on the Mosaic logo or press Esc on the keyboard to cancel a file request.

Location Bar

The location bar has a few functions: The X allows you to cancel an entry in the location field and it returns the field to the origional document address. Selecting the Check submits the current address and prompts Mosaic to load the document.   The location field displays the address of the current document.   The location field also allows you to enter an address to a document in the form of a URL.   The arrow button opens a list box that contains a list of the document addresses visited during the current Mosaic session.

or

Disconnected/Connected

> A visual indicator to show whether Mosaic is waiting for the information server to respond or it has made a connection to the server.

Disk Cache

> Indicates that the requested HTML document is being pulled from the disk cache and not from the associated information server.

⧖ or
⊞ Waiting/Reading

      A visual indicator to show whether Mosaic is waiting to receive the required file or is currently reading data from the information server.

Image Loading

A visual indicator that appears when inline images are a part of a document. To the right of the image icon appears the number of inline images associated with the current document.   This number decreases as the inline image files are received and loaded into the page.

NCSA MOSAIC Progress Meter

The Mosaic progress indicator is a visual aid to help you determine the amount of bytes received for a file.   One hundred percent of the file has been received when the indicator is full.

Text Status

Reports messages concerning connectivity to the information server and the status of a file download while Mosaic is trying to retrieve.   While Mosaic is idle, the text status area displays the document address of a link when the mouse pointer is placed over a hyperlink.

Image Anchor

An inline image that links to other information.   Inline image achors are denoted by a border that has the same color as the text anchors.   Click on the anchor to link to the information.

Text Anchor

   A word(s) that link to other information.

Title Bar

    The title bar displays both the title of the application and the title of the currently displayed document.

System Menu

Opens the standard Windows system menu.

Minimize/Maximize

The down arrow minimizes the Mosaic window and the up arrow maximizes the window to fit the entire screen.

Preferences Dialog Box

Viewers

Mosaic Help is context sensitive, click on the area where you need help:

NCSA Mosaic for Microsoft Windows can use other applications to display file types such as, Microsoft Word, Postscript,   MPEG movies, quicktime movie, Image, etc.   These applications can be commercial software, shareware, freeware or copyright software and we refer to them as external viewers.   In general, if an application can accept command line inputs, Mosaic can use it as an external viewer.   When Mosaic downloads a file that it cannot display, Mosaic can pass the file to an external viewer and this application will display the file to you. For example, if you have Microsoft Word, you can configure Mosaic to pass all files that have the MIME (Multipurpose Internet Mail Extension) type of   application/msword or files extended with .doc to your Microsoft Word application.

For more information about MIME types, available viewers and configuring Mosaic to use specific viewers, see the following URL:

http://www.ncsa.uiuc.edu/SDG/Software/WinMosaic/viewers.htm

Use this preference page to configure your applications as external viewers.   The following fields can be edited but do so with caution.   If you have problems with a MIME/Viewer configuration, check the appropriate MIME type for typos.   You can find a list of MIME types from the above URL.   Editing the information in these fields will change your current viewer configuration.

Associate MIME Type of:
Displays the MIME types and subtypes.   Click on the arrow button to view the
current list of MIME types.

CAUTION: If you edit information in this field, it will change your view configuration.

Description of MIME Type (Optional):
A description of the MIME type displayed in the above field.

With This/These Extensions:
Enter the file extension(s) associated with the MIME type displayed in the Associate MIME Type of: field.

To this Application:

Enter the path and the executable name of the external viewer. Make certain the application software is capable of handling the MIME type. Use the Browse... function to create this association.

Browse...

Opens the standard Windows tree format dialog box for viewing your directories and files. Find the appropriate application software and click OK. Mosaic then fills in the appropriate information in the To this Application: field.

Add
> Click to add a new MIME type and associated information to your MIME type
> list.

Remove
> Click to delete the current MIME type and all associated information from your
> MIME type list.

( ) Host port

[OK] [Cancel] [Apply Now] [Help]

Name:

Enter your name.

E-mail Address:

Enter your email address

SMTP:

Enter the name of your mail server.

Use Extended FTP

  Associates a meaningful icons with directories and file-types.   Mosaic also
  displays the size for each file on an FTP server.   When blank, Mosaic will only
  display the names of the files and/or directories.

Display FTP Messages

  Mosaic opens a dialog box listing the messages generated by the FTP server.

Display Options offers three ways of handling news offerings. Select one from among the three choices:

Thread View
> Display the top level messages without reply messages.

Group View
> Display the top level message and the first level of replies.

Tree View
> Display the top level and all replies in hierarchical format. (Replies to replies are represented at different levels of the hierarchy.)

Load All Articles:

When checked Mosaic loads all available news article headers for the newsgroup you select in Mosaics News interface.   This feature disables the Number of articles to display: feature.

Number of articles to load:

Number of news article headers you want Mosaic to retrieve from the news server.

Number of articles to display:

Number of articles,(10-100), you want Mosaic to display in the document view window.

NNTP Server:

Enter the name of your news server

.sig file

Enter the path to a signature,(.sig), file.   A signature file is a text file that contains contact information about you and/or your organization.   This file is used when post a message to a newsgroup or mail a message using.

Path name

Enter the path of your Telnet application, for example, c:\directory\filename. If you are not sure about the specific path, click Browse, which opens the standard MicrosoftWindows browse window.   Find your telnet application, click OK, and Mosaic will make the association.

Telnet applications use either a colon or a space to distinguish a specific port number. Select one of the options based on applications your needs.
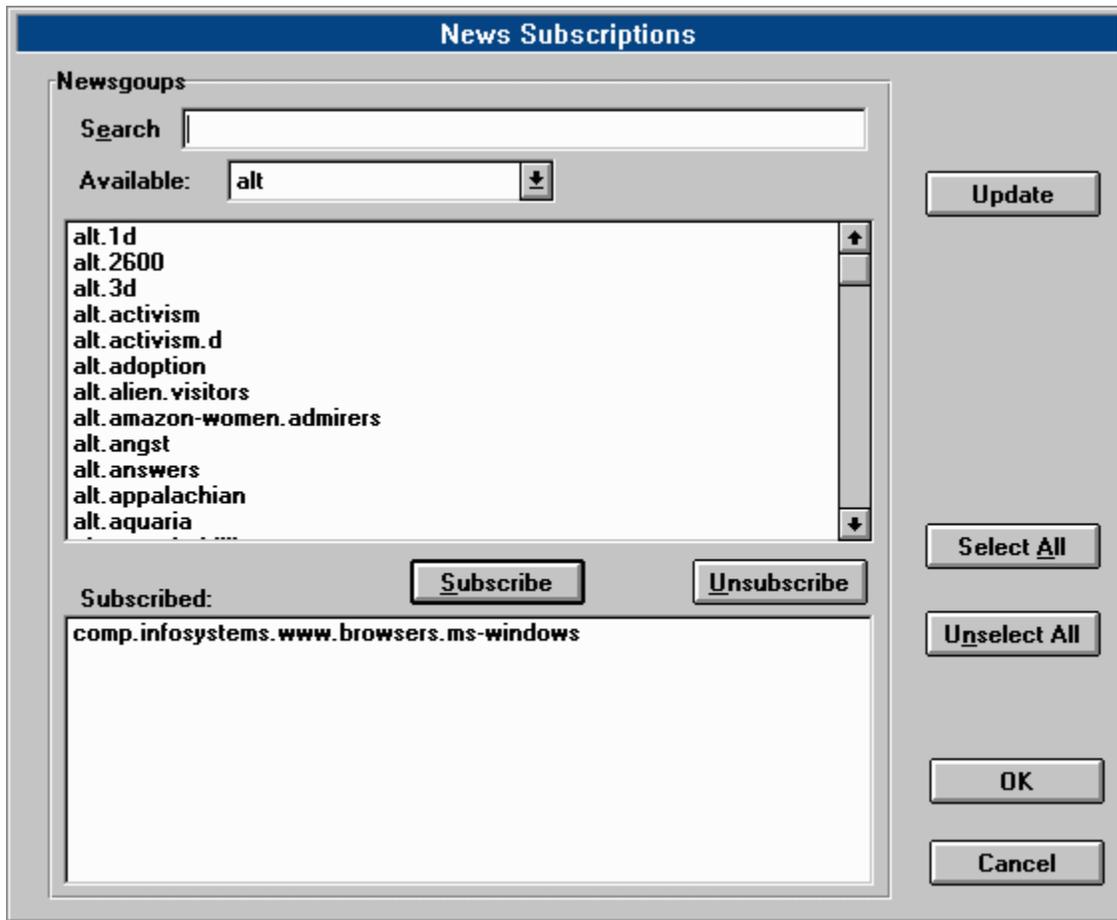

Host:port:

When selected, Mosaic uses a colon to disginguish the port number as specified in the document URL field.

Host port:

When selected, Mosaic uses a space when you specify a port number.

Adds selected newsgroups from the Available field to the Subscribed field. Select a newsgroup from the Available list, click Subscribe to move the newsgroup to the Subscribed list.

Unsubscribe:

Deletes selected newsgroups from the Subscribed list to the Available list. Select a newsgroup from the Subscribed list then click on Unsubscribe to move the newsgroup to the Available list.

Select All:

> Selects every entry in either the Available field or the Subscribed field depending on the location of your cursor.

Unselect All:

> Deselects the entries that were selected.

Subscribed:

        Displays the list of the newsgroups you selected.

Preferences Dialog Box
Proxy

Mosaic Help is context sensitive, click on the area where you need help:

Firewalls are employed by many organizations to protect their local area networks from intruders and to prevent unauthorized employees from leaving the LAN.   Unfortunately, firewalls also prevent NCSA Mosaic from directly retrieving documents over the Internet with out the use of a proxy gateway.

A proxy gateway allows Mosaic to request information from outside the firewall. The proxy gateway (or proxy server) receives an Internet request (in the form of a URL) from a Mosaic application running inside the firewall.   The proxy gateway then makes the request to the Internet and sends the information back to the requesting Mosaic session behind the firewall. Thus network requests are handled exclusively by the proxy server because it is usually the only machine connected to the Internet. Users behind a firewall should feel directly connected to the Internet.

Proxy gateway support   in NCSA Mosaic for Microsoft Windows is currently implemented on a per access method basis, which means different URL access methods may send requests to different proxy servers. Current access methods are ftp, gopher, wais, and http. Requests to ftp sites may go through one proxy server while requests to a web server may go to another.

Configure proxy gateway support using this preferences menu.

Enter the name of the machine that is providing you with proxy services in each field (HTTP Proxy Server, FTP Proxy Server, WAIS Proxy Server, Gopher Proxy Server). If the same machine provides you with services for more than one protocol, enter that name in each field. If you have no proxy services for a listed protocol, leave the field blank.

For example:

HTTP Proxy Server: name.of.your.firewall.machine:portnumber

or

HTTP Proxy Server: proxy.ncsa.uiuc.edu:8080

Machine/Domain List:

This windows lists the network domains that are or are not affected by the proxy services.   For example, if you run a WWW server behind the firewall and you do not want to use the proxy server to gain access to that information.   Instead you could enter the name of your subnet name and list it as no proxy.   Since you are behind a firewall, you would proxy all other domains.

Example:

no proxy   ncsa.uiuc.edu
proxy   all others

Add

Opens a dialog box where you to enter the domain name or the IP number of a specific machine or domain to the Machine/Domain List (e.g., ncsa.uiuc.edu)

Remove

Removes the selected domain entry from the Machine/Domain List.

Proxy

Associates a proxy status with a selected domain; select a domain name and then choose Proxy or No Proxy.

No Proxy

Associates a proxy status with the selected domain; select a domain name and then choose Proxy or No Proxy.

NOTE: You can toggle the proxy/no proxy state of a domain by double clicking on the domain name in the Machine/Domain List area.

Memory Cache

Number of documents kept in memory:
> The number of documents maintained in memory cache during a Mosaic session
> The memory cache is volatile.

Disk Cache

Location:
>   Define the drive: (\directory\path\) to the directory used to maintain the
>   non-volatile disk cache (e.g., c:\Mosaic\Cache\)

Size (KB):
>   The number of KBs allocated to the disk cache (1M = 1024KB)

Enabled:
>   If checked, disk cache is enabled.

Fast Image Caching:
>   Converts cached inlined images into a .bmp format, which increases the
>   pagination speed of the inlined image as they ae loaded from the disk cache.

Never purge home page:
>   If checked, the home page is always in the disk cache.

Clear Cache on Exiting Mosaic
>   Mosaic clears the disk cache when you exit the program.

Check Modification Date From Server:
>   If checked, Mosaic makes certain the most current version of the document is
>   being viewed when a document is reloaded. Mosaic does this by query the
>   server for the header of the document, which contains the file's size and
>   modification dates. If this information changes, Mosaic downloads and displays
>   the more recent version. If the information is static, Mosaic loads the document
>   from the disk cache.   You can set Mosaic to check the documents once per session
>   or every time Mosaic loads a document.

Advanced Cache Manager

Mosaic Help is context sensitive, click on the area where you need help:

Hits

> The number of times the file has been hit from the cache.

Size

> The size of the file.

File

> The actual name of the file.

URL

> The origional URL to the file.

Below this box is statistical information relative to the contents of the cache (e.g., total number of files, the actual size of the disk cache (KB)). The Cache Hit Percentage shows the percentage of times you accessed the cache during the life of the cache and during the present Mosaic session.

Cache the following mime types? is a list of the current MIME types listed in your viewers section and the cache status for each MIME type.

Select a MIME type from the Cache the following mime types? field and click Yes to add a type of file to your disk cache. Select a MIME type from the Cache the following mime types? field and click No to delete a type of file from the disk cache.

Load URL:

Select a URL from the cache management window and click to load the file.

Delete:

Deletes the selected item from the cache.

Never Purge:

Highlight an item in the cache and click this button to save the URL permanently. Items are marked by an asterisk (*) next to the Hits number.

Can Purge:

Highlight an item marked as Never Purge and click this button to removed the asterisk marking the file. If Check Modification Date From Server is checked, Mosaic updates the file the next time you visit the web site.

Clear All:

Removes the contents of the disk cache. If items are flagged Never Purge, verify that you want to delete these items.

File:

Sorts the cache management window by the file type

Server:

Sorts files by WWW server name.

Size:

Sorts by file size.

Hits:

Sorts by the number of times the file is hit from the cache. (The first element in the list has the highest hit percentage.)

Mime:

Sorts by MIME type.

A listing of various events that activate a specific sound within Mosaic. To see an explanation of the various events, click here.

Events

A maximum of twenty-five Mosaic events can be associated with any of the .wav
audio files on your system. An audio tone is sent when a .wav sound file is associated with one
of the following events:

Abort
        Left mouse click on the Mosaic logo or pressing the ESC key

About Box
        From the Help menu, About Windows Mosaic... or the Question Mark in the
        Tool Bar

Add to Hotlist
        The Add to Hotlist icon in the toolbar or open the Hotlist Manager (Navigate,
        Hotlist Manager) and select Edit, Add Curent at Selection Point

Load Document
        Select the green check next to the URL command or press ENTER.

Navigate Back
        Select the left arrow icon from the toolbar or Navigate, Back.

Cancel URL Bar
        Select the red X next to the URL command line.

Copy
        Select a range of text in a document and the Copy icon from the toolbar or
        CTRL+C

Done Loading
        Audio notification when Mosaic has received and loaded the document into the
        document view window.

Find
        Select the Find icon from the toolbar or Edit, Find

Navigate Forward
        Select the right arrow icon from the toolbar or Navigate, Forward

History
        Select Navigate, History

Home
        Select the House icon from the toolbar or Navigate, Home

Image Loaded
        Audio notification when Mosaic loads an image into the document view window.

Mail
        Select the Mail icon from the toolbar, or use File, Send Email... or enter mailto:
        name@address in the URL command line.

News
        Select the News icon from the toolbar, or use File, Newsgroups... or enter
        news:newsgroups into the URL command line.

Open
        Select the Open URL icon from the toolbar, or by selecting File, Open URL...
        (CTRL+O) or File, Open Local File... (CTRL+L)

Paste

Select the Paste icon from the toolbar or Edit, Paste (CTRL+V).

Preferences

When you select Options, Preferences...

Presentation Mode

Select Options, Presentation Mode (ALT+P)

Print

Select the Print icon from the toolbar or select Edit, Print...

Print Preview

Select the print preview icon from the toolbar or File, Print Preview...

Reload

Select the reload icon from the toolbar or Navigate, Reload

Save

Select the save icon from the toolbar or File, Save As...

Shutdown

Doubleclick on the upper left system menu or File, Exit

Startup

Mosaic greets you when you start the application.

WAV Files:

> A list of all WAV files that are to be associated with a specific event.

Test

> Test the highlighted WAV file by playing it back.

Sound File:

       A sound scheme file that contains a listing of WAV files and their locations.

Save

       Saves the current collection of events and associated sound files either in a new specified file or over the currently listed SND file.

Load

       Loads another specified SND file.
