### 1.2 Introduction

PDBase has been made for people like me, who download thousands of files from their BBS and want to archive them on disks in an efficient way.

According to me, efficient means:

\* Possibility to class files in different categories.

\* Possibility of adding comments to each program. Actually, I bet you've already experienced this kind of situation, when a friend asks you: "what is this program aqs28krp2.lha I've just found on your disk?"

\* Easy updating of programs.

\* And above all: maximum of automation.

Since I couldn't find any program that could satisfy me, I took my favorite C compiler and created PDBase. I hope this program will help you saving time in keeping your files in an organized way.

## 1.3 Installation

Simply double-click on the Install icon and follow the instructions.  
(note: Installer must be in the path).

If you haven't got yet Installer, you 'll have to install it by hand.  
It's very easy: just copy PDBase drawer where you want and delete the "Install" file.

## 1.4 Usage

Let's see how to use PDBase.

First, just run it from Workbench or CLI. The main~window appears. On the top, you can see a page gadget showing the current mode. Two modes are available:

- \* Search: you can search a program in your database using jokers.
- \* Edit: you can edit your database, i.e. adding categories and programs.  
That's the mode we'll use in this chapter.

To understand the explanations below, you need to know the terminology used in this document. Then you can first read the three following paragraphs in sequence to learn how to use PDBase. The hypertext links in these section are here only for you convenience.

Here are the main steps for creating your database:

- ~1)~Creating~categories~
- ~2)~Creating~programs~~~
- ~3)~Updating~program~~~~

## 1.5 Terminology

---

To understand the explanations, you have to know the terminology used for PDBase. There are three entities in PDBase:

\* **Category:**

Categories are similar to drawers on a disk. They help to separate your datas in logical groups.

\* **Program:**

A piece of software, like ReOrg, MUI, MUIBuilder, etc...  
It can be composed of several files.

\* **File:**

A physical file. A program can include several files: for instance, the program ReOrg is composed of two files: reorg31.lha and reorg31lpch.lha.

## 1.6 Create Category

You can create your own organisation as you like, but I suggest you use the Aminet organisation. You can use the project/open menu to load the included file "aminet.pdb" which is the tree of aminet.

If you don't use Aminet organisation, you can create your own categories with the "Add" gadget. The category~window will then open: type the name of the category you want to create and click "OK". That's all.

You can navigate into the categories:

- double click on a category in the main listview makes you enter in this category.
- Parent brings you back in the parent category.

## 1.7 Create Program

Here is the main part of your job.

Let's suppose you have just downloaded the two files:

```
reorg31.lha
reorg31lpch.lha
```

which form Holger Kruse's ReOrg disk optimiser.

Go in the category where you want to put it (for instance, "disk/optim") and click on "Add" gadget for programs.

The program~window opens.

Fill in the strings gadgets. Example:

```
Name: ReOrg
Version: 3.11
```

Comment: Fabulous disk optimiser

Then add the two files in "Files" listview with "Add" gadget (and file requesters). When you're done, you can see in "Files" listview two entries: reorg31.lha and reorg31lpch.lha with a little harddisk icon in front of them. This icon means that they are not yet archived (they are still on your hd).

Then, click on "OK".

The copy~window appears, indicating which file (name, size, and current location) will be copied on an archive disk.

You can choose the destination archive disk with two gadgets:

- \* the ASL Popup: opens a file-requester for you to select the destination disk.

- \* the classic popup (down arrow): you can only select a disk already known from PDBase. Known disks are disks where archived programs are.

Note that PDBase chooses as default destination disk the known disk where the file will best fit.

The two checkmarks indicate the actions that will be taken when you click on OK.

- \* Copy file to destination: the file will really be copied from your harddisk to the archive disk. See tricks for examples.

- \* Delete file from source: after copying, the file will be deleted from your harddisk.

Click on OK. The file is probably getting copied (depending on the checkmarks). When this is done, the copy window opens again for processing the second file. The operations are similar to the first and won't be specified.

## 1.8 Update Program

Marvellous, you've just received the new version of ReOrg: 12.23 (this is just an example) !

Go in the corresponding category (for instance, "disk/optim") and double-click on "ReOrg".

The program window opens. You can edit the string gadgets to update the version (you can also edit name and comment if you want).

Now, you've got to update the files. Note that there are two entries in the "Files" listview: reorg31.lha and reorg31lpch.lha. They have a disk icon in front of them which indicates that they are archived on disk.

---

Select "reorg31.lha" and click "Remove". The disk icon in front of it disappears, indicating that this file will be removed from database. Reiterate operation with "reorg311pch.lha".

Now add the new file: click on "Add" and select "reorg1223.lha" as described in Add~program section.

Then click OK. The delete window will appear, indicating that PDBase wants to delete "reorg31.lha" from your archive disk.

The checkmarks "Do not delete file on disk" allows you to remove the file from the database without really deleting it from disk.

Click OK: PDBase asks you the disk where reorg31.lha is, and then deletes the file from the disk.

When this is done, the delete window opens again for "reorg311pch.lha". No comment, same as above.

Finally, the copy window opens for "reorg1223.lha". Refer to Add~Programs.

## 1.9 Reference

Windows:

- Main~window~~~~~
- Category~window~~~
- Program~window~~~~
- Copy~window~~~~~
- Delete~window~~~~~
- Edit~disks~window~
- Rename~disk~window

Menus:

- Project~~~~~
- Prefs~~~~~
- Edit~~~~~

## 1.10 Main window

This is the main window of PDBase. From there, you can navigate in your database, search a program, or edit this database.

Search/Edit (page gadget):

Select PDBase mode:

Search mode allows you to search a program in the database.

Edit mode allows you to edit your database.

---

**Left listview:**

Lists the programs and categories included in the current category.

**Text below:**

Shows the current category.

**Parent:**

Goes to parent category.

**Rigth listviews and Version:**

If a program is selected in the left listview, shows the version, the files composing the program, and the comment.

**In Search mode:****Search:**

The pattern PDBase will search for. All amigados jokers are allowed.

**In Category:**

Shows the category the search is restrained to when in "selected category" search mode.

The popup gadget is used to select the category.

**Next:**

Goes to next program matching search requirements.

**Previous:**

Goes to previous program matching search requirements.

**Name/File/Desc (checkmarks):**

Select which field(s) are compared to the pattern you gave.

**Selected category/Whole database:**

Select whether the search is done in the whole database or in a specified category.

**In Edit mode:****Add (Programs) :**

Add a new program to database

**Edit (Programs) :**

Edit the selected program. Opens Program window.

Same result with a double-click on a program.

**Remove (Programs) :**

Remove selected program.

Select program you want to remove then click on "Remove".

PDBase will ask you the disks where the files composing the program are to delete them. If it can't delete a file, it will ask you if you want to continue the removal. At the end of the

---

operation, if it couldn't delete all files of a program, PDBase will ask you if you really want to remove the program from the base.

Move (Programs) :

Move selected program.

Usage: select program you want to move then click on "Move". The program is removed from the list. Then go in the category you want the program to be moved and click again on "Move".

Add (Categories) :

Add a new category to database

Edit (Categories) :

Edit the selected category. Opens Category window.

Remove (Categories) :

Remove selected category.

Select category you want to remove then click on "Remove". PDBase will try to remove all programs and sub-categories of this category. If it can't delete a program or a category, it will ask you if you want to continue the removal. If it can't delete all programs and categories of the category, PDBase will ask you if you really want to remove the category from the base.

Move (Categories) :

Move selected category.

Select category you want to move then click on "Move". The category is removed from the list. Then go in the category you want the category to be moved and click again on "Move".

## 1.11 Category window

This window opens when you add a new category or edit an old one. It contains all the parameters describing this category.

Path:

Shows the category where the edited category is located.

Name:

Name of the edited category.

## 1.12 Program window

This window opens when you add a new program or edit an old one. It contains all the parameters describing this program.

Category:

---

Shows the category where the edited program is located.

Name:

Name of the edited program.

Version:

Version of the edited program.

Comment:

Comment on the edited program.

Files listview:

Shows the files composing the program.

- \* A disk icon in front of a file points out that this file is already archived (i.e. is on an archive disk).
- \* A Harddisk icon in front of a file points out that this file has just been added and is not yet archived on one of the archive disks. This file will be copied to disk after you click on OK. See Copy~window.
- \* No icon in front of a file points out that this file will be removed when you click on OK. See Delete~window.

Add:

Adds a new file. Opens a file-requester for you to indicate this file.

Remove:

Removes the selected file.

Restore:

Restores a file you removed.

Replace:

One-in-two gadget: removes the selected program and adds a new file.

## 1.13 Copy window

This window opens after the editing of a program, if you have added files to this program. The file will really be added to your database and eventually to an archive disk under your control.

Gadgets:

File:

Name of the file to be copied

Size:

Size of the file to be copied

Source dir:

---

Directory where the file to be copied is at the moment.

Dest dir:

Select where the file will be copied. You can use two popups to indicate the destination disk:

- \* the ASL Popup: opens a file-requester for you to select the destination disk.
- \* the classic popup (down arrow): you can only select a disk already known from PDBase. Known disks are disks where archived programs are.  
In the popup listview, PDBase highlights the disks it THINKS they have enough free space to receive the file.

Notes: - PDBase chooses as default destination disk the known disk where the file will best fit.

- if you choose with the ASL popup a path corresponding to a known disk, PDBase will inform you and select the known disk as destination.

Copy file to destination:

Really copy file to dest disk when OK is clicked. If not checked, the file will be added to the database, but not physically copied to the disk. See tricks.

Delete file from source:

Delete file from "source dir" when copy has succeeded. For security reason, you are not allowed to delete file from source without copying it to disk.

OK:

Process the file according to your choices.

Skip:

Do not process this file but continues the editing procedure.

Cancel:

Do not process this file and stops the editing procedure.

Menus:

Set copy defaults:

Set the current checkmarks state as default.  
See Prefs/Copy~defaults.

## 1.14 Delete window

This window opens after the editing of a program, if you have removed files from this program. The file will really be deleted from database and

---

eventually from your archive disk under your control.

Gadgets:

File:

File to be deleted.

Disk:

Disk the file to be deleted is on.

Do not delete file from disk:

If checked, the file will only be deleted from database but not physically eliminated from the disk.

OK:

Process the file according to your choices.

Skip:

Do not process this file but continues the editing procedure.

Cancel:

Do not process this file and stops the editing procedure.

Menus:

Set delete defaults:

Set the current checkmark state as default.

See Prefs/Delete defaults.

## 1.15 Edit disks window

This window shows you the list of known disks (i.e. used by PDBase to store your files) and lets you adjust some elements.

Listview:

It has three columns,

column1: name of the disk.

column2: free size on this disk.

column3: number of files archived by PDBase on this disk.

Remove:

Removes a disk from the list. You can remove a disk only if it's empty.

Rename:

Renames a disk. Note that you have to relabel physically yourself the disk. See Rename~Disk~window.

Update:

Reads the free space on the disk and updates it in the base.

Useful if you've added files on this disk without using PDBase.

---

## 1.16 Rename disk window

This window lets you rename a disk.

Name:

Name of the disk.

## 1.17 Project Menu

New:

Clears current database to start a new project.

Open:

Opens a disk based database.

Save:

Saves the database on disk with the current name.

(current name is set by successful "Open" or "Save As")

Save As:

Saves the database on disk but asks file name first.

About:

Information about PDBase.

Quit:

Quit PDBase. If database is not saved, opens a requester first to save database.

## 1.18 Prefs Menu

CopyDefault:

This item and the corresponding sub-items select the default state the checkmarks will appear in when the copy window opens.

DeleteDefault:

This item and the corresponding sub-items select the default state the checkmark will appear in when the delete window opens.

## 1.19 Edit Menu

Disks:

Open the Edit Disks window.

## 1.20 Tricks

---

Here are some special situations that PDBase can handle:

~You've~already~got~archive~disks~~~~~  
~Adding~inexistant~files~to~a~program~

## 1.21 You've already got archive disks

If you have already tried to maintain archive disks yourself or with another program, you can keep this disks. The conversion to PDBase will just need a little work.

- 1) On your archive disks, put all the files in the root directory.
- 2) Deselect menu checkmark: Prefs/Copy Default/Copy file to destination  
Then, when the copy window opens, the corresponding checkmark will be disabled.
- 3) Create your categories.
- 4) Add your programs.  
Let's say you want to add ReOrg to you database and ReOrg is already archived on disk "DSK64" as two files: reorg31.lha and reorg31lpch.lha.

Click on "Add" (program). The program window opens. Complete the string gadgets (name, version, comment) and add the two files with "Add" (file) gadget. Then click on OK.

When the copy window appears, select as destination disk "DSK64" (with the asl popup for the first file, the classic popup for the second file). Click on OK: the files are added to the database but not copied.

## 1.22 Adding inexistant files to a program

Sometimes, you may want to add a file to a program in your database, but you haven't got yet this file.

Go in edit program window as usual, and add the file with the file requester: type the name of the file "by hand" in the string gadgets of the requester.

Then, click "OK" in the program window.

Before the copy window opens, a requester will inform you that the file couldn't be found: this is normal. Then, the copy window opens: note that the two checkmarks are unselected and disabled: this means that the file will be added to the database, but no physical copy will occur.

## 1.23 History

---

1.0:  
Initial release

1.0a:  
PDBase was sometimes crashing when quitting. Fixed.

## 1.24 Credits

I would like to thank (in alphabetical order):

- \* Dietmar Eilert: for GoldEd.
- \* Holger Kruse: for ReOrg being a good example (to understand, read usage chapter 8^ ) but also a precious tool.
- \* Cedric Souchon: for beta-testing, help in designing PDBase GUI, and creating the aminet example database.
- \* Stefan Stunz: for his incredible MUI package.
- \* Eric Totel: for MUIBuilder (great tool to save time).

## 1.27 License

This license applies to the product called "PDBase", a program for the Amiga computer, published by Jerome Souquieres under the concepts of FreeWare, and the accompanying documentation, example files and anything else that comes with the original distribution. The terms "Program" and "PDBase" below, refer to this product. The licensee is addressed as "you".

- \* You may copy and distribute verbatim copies of the program's executable code and documentation as you receive it, in any medium, provided that you conspicuously and appropriately publish only the original, unmodified program, with all copyright notices and disclaimers of warranty intact and including all the accompanying documentation, example files and anything else that came with the original.
  - \* You may not copy and/or distribute this program without the accompanying documentation and other additional files that came with the original. You may not copy and/or distribute modified versions of this program.
  - \* You may not copy, modify, sublicense, distribute or transfer the program except as expressly provided under this license. Any attempt otherwise to copy, modify, sublicense, distribute or transfer the program is void, and will automatically terminate your rights to use the program under this license. However, parties who have received copies, or rights to use copies, from you under this license will not have their licenses terminated so long as such parties remain in full compliance.
  - \* By copying, distributing and/or using the program you indicate your acceptance of this license to do so, and all its terms and conditions.
  - \* Each time you redistribute the program, the recipient automatically receives a license from the original licensor to copy, distribute and/or use the program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein.
  - \* You may not disassemble, decompile, re-source or otherwise reverse engineer the program.
  - \* If you wish to incorporate parts of the programs into other programs, write to the author to ask for permission.
  - \* You agree to cease distributing the program and data involved if requested to do so by the author.
  - \* You may charge a fee to recover distribution costs. The fee for diskette distribution may not be more than the cost to obtain a public domain diskette from Fred Fish.
-

## 1.28 No Warranty

THERE IS NO WARRANTY FOR THE PROGRAMS, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAMS "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAMS IS WITH YOU. SHOULD THE PROGRAMS PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY REDISTRIBUTE THE PROGRAMS AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAMS (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAMS TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

## 1.29 Disclaimer

No warranty, either express or implied, is made with respect to the fitness or merchantability of PDBase.

Jerome Souquieres (referred to as "the author"), reserves the right to not develop any future versions of PDBase.

The author will try to make a good faith attempt at correcting any problems if any are discovered, but is in no way required, nor bound to correct them.

The author neither assumes nor accepts any responsibility for the use or misuse of these programs. He will also not be held liable for any damages arising out of the use, or inability to use this program.

The author will not be liable for any damage arising from the failure of this program to perform as described, or any destruction of other programs or data residing on a system attempting to run the programs. The user of this program uses it at his or her own risk.

## 1.30 GoldEd

GoldEd is (C) Dietmar Eilert.

## 1.31 MUI

---

This application uses

MUI - MagicUserInterface

(c) Copyright 1993/94 by Stefan Stuntz

MUI is a system to generate and maintain graphical user interfaces. With the aid of a preferences program, the user of an application has the ability to customize the outfit according to his personal taste.

MUI is distributed as shareware. To obtain a complete package containing lots of examples and more information about registration please look for a file called "muiXXusr.lha" (XX means the latest version number) on your local bulletin boards or on public domain disks.

If you want to register directly, feel free to send

DM 30.- or US\$ 20.-

to

Stefan Stuntz  
Eduard-Spranger-Straße 7  
80935 München  
GERMANY

## 1.32 MUIBuilder

MUIBuilder is (C) Eric Totel.

## 1.33 ReOrg

ReOrg is (C) Holger Kruse.
