Chapter 1

BME.EDI

1.1 Menus: Edit

Edit:

Cut	Removes the selected area to the clipboard.
Copy	Copies the selected area to the clipboard.
Paste	Pastes the clipboard contents into the picture as an area.
Erase	Removes the selected area.
Select All	Selects the entire picture.
Undo	Cancels the previous action.
Redo	Un-cancels the previous action.

1.2 Edit/ Cut

Edit/ Cut

This command removes the selected area to the clipboard so that it can be pasted into another position in the picture, another picture, or another program. Unlike the Copy command, the Cut command removes the area from the picture and fills it with the background color. The previous contents of the clipboard will be replaced with the selected area.

1.3 Edit/ Copy

Edit/ Copy

This command copies the selected area to the clipboard so that it can be pasted into another position in the picture, another picture, or another program. The original area will not be changed, but the previous contents of the clipboard will be replaced with the selected area.

1.4 Edit/ Paste

Edit/ Paste

This command pastes the contents of the clipboard into the current picture as an area which can be moved. You can use the Paste command only when a picture or brush is stored in the clipboard.

1.5 Edit/ Erase

Edit/ Erase

This command deletes the selected area and fills it with the background color. Unlike the Cut command, the removed area is not stored in the clipboard and cannot be retrieved.

1.6 Edit/ Select All

Edit/ Select All

This command selects the entire picture.

1.7 Edit/ Undo

Edit/ Undo

This command undoes the last action performed in BME.

You cannot undo changes to the clipboard contents or other files. If you copy or cut something to the clipboard, the previous contents of the clipboard will be permanently deleted. (You can undo the part of the Cut command which removes an area.) If you save a picture over an existing file, the previous file will be permanently overwritten.

You can limit the number of levels of undo permitted with the General settings command to save memory. Undone changes may be redone with the Redo command.

1.8 Edit/ Redo

Edit/ Redo

This command redoes the last action undone with the Undo command. If you have not used the Undo command, or if the actions that have been undone have already been redone, the Redo command will not be available.
