1.2 Introduction

What is it for?

Check user new public and waiting mail (Dlglogin.batch).

Diamail offers lots of good features not available in a single package before. This is really something what should've been in since start.

NOTE!! Diamail is not a messagearea replacement.

Do not ever dream reply option etc.

1.3 Requirements

Requirements?

- o Amiga computer is needed.
- o OS 2.04 and upwards. Developed on A3000 OS3.1.
- o Dialog Pro.
- o Dlg.library is needed in libs:
- o T: assign, naturally.

1.4 Features of Diamail

Features?

- o Nice looking scrolling routines. Thanks to Erno.
- o Multiple sysop editable language-files (REG).
- o Moving around the list with KEYPAD and CURSORS.
- o Saves user configuration.
- o Own colours settings for every user (REG).
- o Check public and private mail.
- o UUCP mail check with alias or without.
- o Message read with SPACE.
- o Sysop configurable buttons for many commands.
- o Possibility to delete waitingmail-list.

1.5 How to change languages

You need .dat files. I will give them as soon as you register.

Use editor like CED and change them. Then compile with dialog command compilelang.

Default language is english.

1.6 Installation

Installation?

- o Copy all languagefiles in dlgconfig:languages/
- o Copy Diamail.cfg in dlgconfig:misc/
- o Copy the mainfile somewhere.
- o Add Diamail in Login.dlgbatch file.

Then test it!!!

1.7 Limitations (in unregistered version)

Limitations in unregistered version?

There is some crippled features. Users (user level below 255) do not have ability to change colours. Also I made one irritating *UNREGISTERED* reminder end of the program.

- o User can not change colours.
- o You can not change buttons.
- o UUCP check is set to check mail with alias.
- Uumail:<alias> NOT uumail:Janne_Saarme.

How to **Register**?

Other limitations?

ANSI-terminal is needed and screen width should be atleast 80 and height 22.

1.8 Registered

Why to register?

- o You are helping me to develop this project.

Now I am unemployed.

- o Also I have spent lots of hours/nights with this util.
- o Future versions will include more options. **TODO**

What you get?

- o Simple "editor" for changing default buttons.

Later maybe MUI-editor.

- o Languagefiles. You can edit own languagefiles.
- o User can change colours.

- o You will allways receive latest Diamail by e-mail.

Ofcourse you need internet e-mail address. If you do not have e-mail address, you can get it ANS -> **Contact**.

I do not like keyfiles.

Binary is still quite small so that is delivery.

Now hopefully reasonable shareware feeds:

Remember!! No CHEQUES. Only U.S.dollars, German marks or Swedish kronor.

- 15US for foreigners.
- 50mk for finns.

If you send German marks or Swedish kronor, send the same amount as 15US.

PS. You may use this version for an evaluation period of 30 days free. After that period, if you like it and want to use it, PLEASE register.

1.9 Distribution

Distribution & Copyrights?

Diamail and all other files, are copyrighted by **Janne Saarme**.

However, this archive may be freely distributed and copied for NON-COMMERCIAL use only. Under any circumstances may you NOT to redistribute a modified version of DiaMail. Neither may any redistribution of DiaMail for profit be made.

If you use MagicFile, you do this entirely at your VERY own risk.

I am not responsible of ANY of the damages DiaMail might cause.

1.10 TODO

To-Do?

Maybe I will later add these features.

- o Configurable buttons for every language.

English Y(es)/N(o), Finnish K(yllä)/E(i).

- o Possibility to switch Diamail off.

- o Language selection for user.

- o Somekind of UNDO (do not save changes).

- o Maybe user level configuration.

- o Help file for user.

1.11 History

V1.0 - The first version.

04/11/92

V1.1 - Fixed close bug.

11/11/92

V1.2 - Optimized version (Not released).
