

## 15 Mailing List

### Subscribing

To support all users of SimpleWave a mailing list is available. When you have a question regarding SimpleWave you can email it to:

`simplewave-list@bio.vu.nl`

(if you email from a network outside Internet, the address may be somewhat different. Contact your network provider for details on how to email to an Internet address.)

Your message will then be distributed to all other subscribers whom may answer your question, or else the author will. Sharing your problems and the solutions with all other SimpleWave users is beneficial to all of us.

The messages are collected and then send out in a single email as a digest.

To subscribe you can email a question and you are subscribed automatically. Or to subscribe explicitly you can email to:

`simplewave-list-request@bio.vu.nl`

Included within the subject line the command 'subscribe'. To unsubscribe you can use the command 'unsubscribe' instead.

If you haven't registered your copy of SimpleWave you are allowed to email questions and be subscribed to the mailing list. If you haven't registered after a month since your subscription started you are removed from the mailing list and added to a list with addresses to reject messages from.

This is to help users to set up SimpleWave and have them decide to keep or trash SimpleWave. If you don't register you're not entitled to any further assistance through the mailing list. This would be very unfair towards the registered users.

### Getting the latest version

The latest version of SimpleWave can be retrieved by email from the mail archive server by using this command as the subject of an email:

`archive get simplewave*`

Send the email to this address:

`simplewave-list-request@bio.vu.nl`

You will then receive the latest version of SimpleWave by email as a StuffIt archive.

### World Wide Web

At the time of this writing no special WWW page has been set up for SimpleWave related information. You may want to check out the home page of the author every now and then. The URL of the authors' home page is:

<http://www.bio.vu.nl/home/rgaros/>

If and when a SimpleWave WWW page is started, an announcement will be posted on the mailing list.
