

16 Acknowledgements

I want to thank the following persons for their help and support for the SimpleWave project:

- Jim Luther for the MoreFiles source examples which proved to be very useful and also for the suggestions and remarks he made to me by email.
- Pete Resnick for the suggestions for the time-out of the messages.
- Victor Tan (author SpeedyFinder7) for the suggestions regarding comparing files for differences and background copying.
- Hans Verbrugge, who provided some useful general remarks and suggestions.
- Thomas Robb and Chip Sample for reviewing the manual thoroughly and replacing whole parts to have the manual look professional! (When in doubt I follow the English-Dutch dictionary I have, so British and American spelling may be mixed up).

Anie eror you ztil vind waz later pud in by me! :-)

- My former colleagues at the Vrije Universiteit (Frans Leeuwerik, Jos van Wezel and Cor Stoof) for their comments and suggestions while discussing SimpleWave's workings. Many thanks to Vincent Meulenbroek for providing all the software which needed to be distributed by SimpleWave and thus stress-testing SimpleWave, me and the others at the Computer Department! ;-)

Jos also provides the mailing list and WWW support.

- The students at the Vrije Universiteit who were subject to my testing and they deserve some credit too! A few provided some useful suggestions.
- Thomas Robb, Chip Sample and Gerrit Slotboom for testing and asking good questions during installing and using SimpleWave. Also many thanks to the other testers.
- Hi Resolution Ltd. (Roger Lang) for providing a copy of MacPrefect and additional code to make SimpleWave compatible with MacPrefect. MacPrefect is a utility which protects the harddisks from unauthorized modifications like deleting files. You can get a demo version of MacPrefect by contacting Hi Resolutions at one of the addresses below.

- Marco Piovanelli for writing the AESender application which was used to test the Apple events.

Parts of the code for SimpleWave were originally developed for externals I've published for use with 4th Dimension and HyperCard: 4D Mount Pack, 4D Speech Pack and ServerMount XFCN. Also thanks to those who tested these and contributed ideas for them.

Thanks to you all !
