

This demo showcases the [About... Unit](#), which provides a simple, drop-in means of creating a modal or modeless, styled TEXT display system suitable for online help. It's being made available as [SHAREWARE](#).

To use this demo, simply specify the Top, Left, Right, and Bottom window coordinates, window title, message text, and window type. Choose the "Set" button to easily set the window coordinates by drawing a rectangle. Windows must be at least 100 (v) by 150 (h) pixels and fit entirely on the main monitor.

Select the "Call About..." button or double-click on a radio button to show a sample window; "Quit Demo" to exit the demo. Read the text displayed in the sample windows to find out more about About...

If the window cannot be displayed (probably because of size or placement), the speaker will sound and no window will be built.
