

When performing complex reformatting, it may be useful to be aware of the order in which A/S performs its processing:

- Remap characters if required by chosen remapping set
- Replacement set #1-150
- Filter noise characters
- Make ellipses
- Make em dashes
- Make ligatures
- Leading string (done in main process if "Make Paragraphs" is chosen)
- Strip trailing spaces
- Quotes & apostrophes
- Normalize spaces
- Adjust case
- Perform main process
- Remap characters if required by chosen remapping set
