

Edit Add/Strip™ is an application that can remove certain resources from A/S to make it smaller, install different animated cursors, create, edit and import character remapping sets, and allow registered users to create a personalized copy. A resource editor like ResEdit could be used to do the same thing, but A/S won't work properly if the wrong resources are removed or altered.

This program should only be used on personal copies of A/S. Under no circumstances should altered copies be distributed! Only alter copies. Save the original!
