Preparing to Install the Adobe Level 2 PostScript Driver

This document describes how to prepare your Windows system *before* installing the Adobe Level 2 PostScript driver. Installation instructions for the Level 2 PostScript driver come with the software.

Before installing the Adobe driver, remove all previous Adobe PostScript printer drivers from the system.

To remove all previous drivers:

1. Delete the following files from both your \Windows and \Windows\System directories. Not all files may exist in your configuration.

   ADOBEPS?.*
   RUN_ENUM.*
   PSINSTDV.EXE
   WINDOWN.EXE
   PS_ENUM.*
   DOWN.DLL
   DWN.HLP

2. Back up the WIN.INI file.

3. Using a text editor, such as DOS EDIT or Windows Write, delete these specifically marked lines from the WIN.INI file.

   [PostScript Device, <port>] *<<do not delete*
   Printername=Printer Nickname *<<delete this line only*

   [Devices] *<<do not delete*
   PostScript Device=ADOBEPS, <port>,... *<<delete this line only*

   [Printer Ports] *<<do not delete*
   PostScript Device=ADOBEPS,<port>,15,45,... *<<delete this line only*

   [Adobe PS] *<<delete this line and…*
   Printer Number=1 *<<delete this line*

   If the device= line in the [Windows] section of the WIN.INI refers to ADOBEPS, delete that line as well.

3. Save your changes to WIN.INI. Make sure you save your changes as a *text* file; Windows Write (for example) can add formatting to a text file that makes it unable to work as it should.

4. Restart Windows.

You are now ready to do the installation of the Adobe Level 2 PostScript Driver.
