Using Suitcase™ with the Adobe Type Library

Suitcase™ 2.xx Icon

Using Fifth Generation's Suitcase 2.xx in conjunction with Adobe Type Library allows easy installation and access to individual font families. This document provides an overview of the recommended method of font installation.

INSTALLATION OF SUITCASE

System 6
Insert the Suitcase disk into the floppy drive. Open the disk and drag the Suitcase 2 icon to the System Folder. Restart your Mac.

System 7™
Insert the Suitcase disk into the floppy drive. Open the disk and drag the Suitcase 2 icon to the closed System Folder icon. At the prompt to put Suitcase into the Extensions folder, click OK, and restart your Mac.

System 7.1
If you are using System 7.1 and a Macintosh Quadra™ 800, Centris® 650, Centris 610, LC III, Duo 210 or 230, or a PowerBook™ 160 or 180 in conjunction with Adobe Type Manager™, move Suitcase 2 from the Extensions folder to float free in the System Folder.

The first step to install fonts is to create a font resource folder. A good place to create this folder is on the first level of your hard drive. To complete this step, follow the guidelines provided below:

1 Open your hard drive. On the root level of your hard drive select New Folder from under the File Menu. Title your new folder FONTS.

2 Insert and open the Adobe Type Library diskette. Now open the Bitmapped Fonts folder and drag the font suitcases to your new FONTS folder.
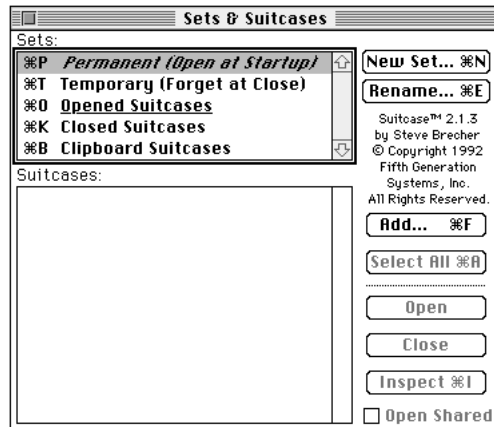

3 Close the Bitmapped Fonts folder and open the Outline Fonts folder. Drag each outline font to the same FONTS folder in which you copied your bitmaps.

4 Repeat steps 2 and 3 if you have more than one Font Family to install. If not, eject the diskette and proceed to the next section, "Opening Your Fonts."

OPENING YOUR FONTS

Now that the Adobe font is installed, open it from within Suitcase. From the Apple Menu, select Suitcase. (If Suitcase doesn't open, and instead your System beeps, hold down the Option Key and select Suitcase from the Apple Menu.)

If Show Sets & Suitcases is selected under the Suitcase Menu, the dialog box shown below appears:

Add fonts to the Permanent set, which will allow them to automatically load at startup.

1 Make sure that Permanent is selected as the figure shows. Click the Add button and navigate to your FONTS folder. Don't be alarmed when you notice that only your bitmapped suitcases show up in this dialog box. The outline fonts that are also in your FONTS folder are used for ATM and for your printer only. They will *not* show up in your Font menus or in a Suitcase dialog box.

2 Next, select the font name in the list to open, and click the Add button on the right. Notice that after the font is opened, it disappears from the list. Repeat this step with the remaining fonts to open at startup. After loading all of your fonts, click the Done button and return to the main Suitcase dialog box. You now see the fonts you just added to your Permanent set.

Note: Only those fonts that are underlined will be active.

This technical note should be used as a reference only. Because Suitcase is not an Adobe Systems product, all procedures mentioned herein should be used as suggestions only. For complete Suitcase technical support, please contact Fifth Generation Systems directly.
