Installing Word for Windows Equation Editor Fonts in ATM™

WINDOWS 3.0

The fonts are copied to the equation editor directory during the installation of the equation editor. The default directory for the equation editor is C:\Windows\msapps\equation. To install the equation editor fonts, follow the directions in the ATM manual. The source directory for adding fonts should be the equation editor directory. If the fonts do not appear in the equation editor directory, follow the directions for adding fonts to Windows 3.1.

WINDOWS 3.1

The Type 1 version of the equation editor fonts is not automatically copied onto the hard disk during installation. To install the fonts into ATM requires decompressing the font files from the Word for Windows installation disk. First, copy the DECOMP.EXE program from the Word for Windows installation disk. Second, place the equation editor disk into your floppy disk drive. Third, decompress the files, and place them into the PSFONTS directory using the following commands from the DOS prompt.

```
C:\DECOMP A:\EQUATION\*.PB$ C:\PSFONTS
C:\DECOMP A:\EQUATION\FENCES.PF$ C:\PSFONTS\PFM
C:\DECOMP A:\EQUATION\MTEXTRA.PF$ C:\PSFONTS\PFM
C:\DECOMP A:\EQUATION\MTSYMBOL.PF$ C:\PSFONTS\PFM
C:\DECOMP A:\EQUATION\MTSYMITA.PF$ C:\PSFONTS\PFM
```

This procedure will decompress and copy the files into the correct directories for use with ATM. Finally, add the fonts into ATM following the instructions in the ATM manual. The source directory for adding fonts should be C:\PSFONTS\PFM, and the fonts to add are Fences, MT Symbol, MT Extra, and MT Symbol Italic.

When the fonts are successfully installed into ATM, the DECOMP.EXE file can be deleted from the hard disk.

Note: If your fonts are installed into a directory other than the default C:\PSFONTS, use that directory instead of C:\PSFONTS. If the Word for Windows disk is in drive B, use drive B instead of drive A.
