Counterclockwise Text

CREATING COUNTERCLOCKWISE TEXT

1 Use the arc tool in TypeAlign™ and draw an arc.

2 Use the text tool (automatically selected after arc is drawn to type some text).

3 Use the pointer tool to grab the middle selection point on the lower part of the TypeAlign object and proceed to drag straight down. Notice that the arc begins to bend inward. Your text will look like the example below. Further adjustment may be necessary to achieve the desired effect.
