Installing Fonts from Packages with Multiple Disks

ADOBE TYPE MANAGER™ AND FONTS FOR THE PC

Some font packages contain so much font file information that it won't all fit on one disk. Two or more disks are used in these cases, but that can lead to some confusion when installing because often the needed file is on another disk. This situation results in a message such as "Cannot find file." Some packages may use more disks for the 3.5-inch format than for the 5.25-inch format.

TWO WAYS TO DEAL WITH THIS

1 To install from floppy disks, insert one of the other disks when you get the above message until you get the correct disk. As installation continues, you may need to swap disks several times.

2 To install a package with more than two disks, copy the contents of these disks to a temporary directory on your hard disk drive, and install from there. This way, all files will be available when needed. When installation is complete, remove this temporary directory

The following Adobe Rev 3 Font packages contain more than one font disk:.

Package	3.5 inch	5.25 inch
Adobe Postscript™ Cartridge	3	2
Plus Pack	2	1
Adobe Type Cartridges 1 & 2	2	1

REV 1 AND 2 FONTS

When adding Rev 1 or Rev 2 fonts into ATM™, search through all font disks and copy all files with PFB and PFM extensions to a temporary directory on the hard disk, Add them to ATM from there. Once the fonts have been added into ATM, remove the temporary directory.
