Fonts with Revised Menu Names

A number of Adobe typeface packages have been revised with new font menu names to provide better compatibility for users transfering files between Macintosh and Windows applications. This change only affects applications that recognize fonts by menu name—programs such as Adobe Illustrator access font by PostScript name, and therefore never had a problem with cross-platform compatibility.

If you have experienced problems with fonts not being recognized when the file "comes across" to a new platform, replacing your old fonts with the new ones should solve your problem, if it is due to menu name conflicts. Registered owners of the font may contact Adobe Systems for a free upgrade.

If you are having problems getting your files printed properly at a service bureau because of font naming problems, even if you are not changing computer platforms, it may be because your font names don't match the ones the service bureau is using. Consult the chart below to see if you are using the latest version, and contact Adobe if you need an upgrade.

Note: The fonts Helvetica Narrow, Zapf Chancery, ITC Zapf Dingbats, ITC Avant Garde, and New Century Schoolbook have not been changed, even though the font menu names are different across platforms. The reason is that corrections have already been programmed into most application and driver software.
