What's New in Windows CodeBack?

Version 1.05.11

- Support for Windows 3.1 VxD services. WCB now includes a new DEFAULT.VSL file that contains the 3.1's service names.
- A new option (-E) to tell WCB where it can find the EXL and VSL files; also a new environment variable was invented to provide the same functionality as the **-E** option..
- WCB now supports the self-loading applications.
- WCB now shows General Protection fault handlers, and blocks protected by them in the disassembled list.
  - A bug in the symbol-handlig part, which enabled null-length symbol names was fixed.
