DinkClass is a small Think C5.0 (and MPW C++) application framework for system 7 applications.

DinkClass is now offered as shareware.
If you use ANY of it in your own software, then you must pay a one time fee to Applied Technical Software (ATS) of $45. In return you will get unlimited rights to distribute any COMPILED programs created using part of DinkClass source code. However; the distribution of any source code derived from parts of the DinkClass software MUST BE DONE WITH APPLIED TECHNICAL SOFTWARE'S CONSENT!!!! (So, give me a call.)   You also get, for the $45, two free maintenance updates of the basic class library, of the basic demo applications, of the documentation, any extra demo applications I may have created (DComDemo a CTB demo, for instance), the MPW C++ supporting files (.make, .r, .c files renamed to .cp, etc.), and telephone and EMail support. Maintenance updates go out in December and July.

The DinkClass ShareWare distribution package includes:
• Think C 5.0 projects with well commented source code for 2 applications and the Template project.
• Think C 5.0 source files for the base class library.
• Off-line documentation of the key features implemented in the class library, all conforming to the Feature Oriented Documentation standard developed. Features documented in this way include:
All the applications, Scrolling Windows, Event parsing, File and I/O handling, Clip board support, Menu Handling, and more.
• A readme file.
• A directory "Listings" file of what constitutes this ShareWare distribution.
• A shameless flier soliciting contract software development work for ATS.
• The executable form of the CTB demo application.
• This "Posting note"

Feel free to redistribute this shareware package of DinkClass as you wish, but
ALL OF THESE FILES MUST STAY TOGETHER UNALTERED IN ANY RE-TRANSMISSION OR DISTRIBUTION OF THIS SHAREWARE PACKAGE!!!!!

p.s. it would be nice if someone could but this package in some of the INTERNET repositories (like SUMEX)
